CONFRONTATION’S MULTI-ANALYST PROBLEM

by: Paul F. Rothstein* & Ronald J. Coleman**

ABSTRACT

The Confrontation Clause in the Sixth Amendment affords the “accused” in “criminal prosecutions” the right “to be confronted with the witnesses against” them. A particular challenge for courts over at least the last decade-plus has been the degree to which the Confrontation Clause applies to forensic reports, such as those presenting the results of a DNA, toxicology, or other CSI-type analysis. Should use of forensic reports entitle criminal defendants to confront purportedly “objective” analysts from the lab producing the report? If so, which analyst or analysts? For forensic processes that require multiple analysts, should the prosecution be required to produce each and every analyst involved in handling the sample, participating in the testing process, or making any type of even minor representation contained in the report? Although the Supreme Court has had several occasions to opine on the application of the Confrontation Clause to forensic reports, and although such precedent suggests criminal defendants enjoy at least some right to confront a forensic analyst, a great deal of uncertainty persists as to which analyst or analysts must be produced in cases involving multiple analysts. A certiorari petition considered by the Supreme Court in March 2021—Chavis v. Delaware—could have permitted the Court to address this multi-analyst problem. Even though the Court determined Chavis was not the appropriate vehicle for resolving the multi-analyst problem, this is an extremely important issue for labs, local stakeholders, and lower courts, and Justice Gorsuch even dissented from the Court’s denial of certiorari. The purpose of this Article is to identify and discuss six plausible approaches the Supreme Court could consider in resolving the multi-analyst problem.

Professor Rothstein specializes in the judicial process and related subjects, and his background includes, among other things, experience as a litigator, as a consultant to the U.S. government, and as part of a team helping draft constitutions for countries emerging from the former USSR. He has authored numerous books and articles, including having written extensively on the Confrontation Clause and similar areas.

** Adjunct Professor of Law and Program Attorney, Georgetown University Law Center. Admitted to practice in New Jersey, New York, and Pennsylvania.
Imagine Detective Harry Bosch of Hollywood Homicide has investigated the murder of a famous actress and her boyfriend. Bosch has identified who he believes to be the killer, and the key piece of evidence linking the accused to the double murder is a DNA match between a swab taken from the accused and a DNA sample from the crime scene, the actress’s chateau in the Hollywood Hills. A well-known private forensic lab outside of California handled the DNA analysis. The District Attorney’s Office has just advised Bosch that, under the Confrontation Clause (the “Clause”) in the Federal Constitution and relevant U.S. Supreme Court precedent, the accused will likely have the right to confront and cross-examine an analyst from the forensic lab. Even though Bosch has been working Hollywood Homicide for many years, he is now perplexed. He believes more than five analysts may have been involved in the forensic DNA analysis process, with some likely performing only very minor roles. Could this mean that, unless each and every one of those analysts appears to testify at the accused’s trial, the accused could walk?

The Confrontation Clause in the Sixth Amendment affords the “accused” in “criminal prosecutions” the right “to be confronted with the witnesses against” them.¹ The difficulty has come in determining when the Clause applies in a given case. Since Crawford v. Washington, the Supreme Court has held that the Confrontation Clause applies only in cases involving a certain subset of out-of-court statements which could be considered equivalent to “bear[ing] testimony” in court.² Such so-called “testimonial” statements of declarants not testifying at trial are “admitted only where the declarant is unavailable, and only where the defendant has had a prior opportunity to cross-examine.”³ However,

¹. U.S. CONST. amend. VI. The right to confront also applies to states under the Fourteenth Amendment. See Pointer v. Texas, 380 U.S. 400, 403 (1965); see also David L. Faigman et al., Gatekeeping Science: Using the Structure of Scientific Research to Distinguish Between Admissibility and Weight in Expert Testimony, 110 NW. U. L. REV. 859, 876 (2016).
³. Id. at 59.
**CONFRONTATION’S MULTI-ANALYST PROBLEM**

Crawford and its progeny have not fully defined what statements are “testimonial.”

A particular challenge for courts over at least the last decade-plus has been the degree to which the Confrontation Clause applies to forensic reports, such as those presenting the results of a DNA, toxicology, or other CSI-type analysis. Should use of forensic reports entitle criminal defendants to confront purportedly “objective” analysts from the lab producing the report? If so, which analyst or analysts? For forensic processes which require multiple analysts, should the prosecution be required to produce each and every analyst involved in handling the sample, participating in the testing process, or making any type of even minor representation contained in the report? Although the Supreme Court has had several occasions to opine on the application of the Confrontation Clause to forensic reports, and although such precedent suggests criminal defendants enjoy at least some right to confront a forensic analyst, a great deal of uncertainty persists as to which analyst or analysts must be produced in cases involving multiple analysts.

A certiorari petition considered by the Supreme Court in March 2021—Chavis v. Delaware—could have permitted the Court to address this multi-analyst problem. In Chavis, the prosecution was permitted to offer the results of forensic DNA analysis—produced by a

4. See infra Part II. “Testimonial” statements would seem to include “out-of-court written or oral statements meant or understood to provide some form of evidence for use at trial, especially if made solemnly and to a state actor or agent.” Ronald J. Coleman & Paul F. Rothstein, *A Game of Katso and Mouse: Current Theories for Getting Forensic Analysis Evidence Past the Confrontation Clause*, 57 Am. Crim. L. Rev. 27, 27 (2020) [hereinafter *A Game of Katso and Mouse*].

process involving multiple analysts—through the testimony of a single lab analyst. This testifying analyst’s report and testimony relied on her conclusion that other analysts at the lab had performed their work properly, but her conclusion was based on a review of such other analysts’ entries in case files rather than on personal knowledge. The Delaware Supreme Court found that this did not violate the Confrontation Clause, and notwithstanding Justice Gorsuch’s dissent, the U.S. Supreme Court denied certiorari. Was the Delaware Supreme Court’s conclusion in Chavis correct, and how should courts handle the multi-analyst problem in future cases?

This Article identifies and discusses six plausible approaches the U.S. Supreme Court may consider in addressing the multi-analyst problem. The remainder of this Article proceeds as follows: Part II provides relevant background on the Confrontation Clause, including the challenge posed by forensic reports; Part III describes the Chavis case and petition; Part IV presents our six approaches for addressing the multi-analyst problem; and Part V concludes and speculates as to which of our six approaches the Supreme Court would be most likely to prefer.

II. CONFRONTATION CLAUSE BACKGROUND

Before Crawford v. Washington, Confrontation Clause cases were analyzed under the regime established in Ohio v. Roberts. Under Roberts, a non-testifying declarant’s hearsay statement could only be admitted against a criminal defendant if the declarant was unavailable and the statement bore “adequate indicia of reliability.” Crawford overruled Roberts and placed the focus on whether a given statement was “testimonial.”

8. Id. at 1081.
9. Id. at 1095.
12. Ohio v. Roberts, 448 U.S. 56, 66 (1980); see also Paul F. Rothstein & Ronald J. Coleman, Confronting Memory Loss, 55 GA. L. REV. 95, 100 (2020) [hereinafter Confronting Memory Loss] (“Prior to Crawford, courts were guided in Confrontation Clause cases by Ohio v. Roberts.”).
A. The “New” Interpretation of the Confrontation Clause

In *Crawford*, Michael Crawford was tried for attempted murder and assault, and the state attempted to use his wife’s tape-recorded statements as evidence against him. The wife had made the statements during a police interrogation, but she did not testify at trial due to the State of Washington’s marital privilege rules. Crawford argued that admission of her recorded statements violated his Confrontation Clause rights, but the wife’s recorded statements were nevertheless admitted and played for the jury.

Justice Scalia, writing for the Court, determined that admission of the recorded statements violated the Confrontation Clause. He considered the Sixth Amendment’s text, lengthy history of confrontation rights, and prior Supreme Court precedent and advanced two conclusions regarding the Confrontation Clause: (1) The Clause only applied to so-called “testimonial” statements, and (2) use of the “testimonial” statements made by a declarant not appearing at trial was impermissible unless the declarant was “unavailable” and the defendant had some prior opportunity to cross-examine the declarant.

Justice Scalia reasoned that the primary evil at which the Clause was directed was the civil law style of criminal procedure, and in particular its using *ex parte* examinations against the accused. Such practices were exemplified by the “notorious” Sir Walter Raleigh treason trial, in which out-of-court evidence from Raleigh’s alleged accomplice, Lord Cobham, was used against Raleigh at trial, and the judges refused Raleigh’s demand that Cobham appear. The Clause’s text, itself, also applied to “witnesses,” meaning those who “bear testimony.” Accordingly, the Confrontation Clause applied only to what Justice Scalia referred to as “testimonial” statements: a certain class of out-of-court statements which are the functional equivalent of in-

17. *Id.*
18. *Id.* at 68–69.
19. *Id.* at 40–60.
20. *Id.* at 50.
21. *Id.* at 44. Said Justice Scalia:
   Through a series of statutory and judicial reforms, English law developed a right of confrontation that limited these abuses. For example, treason statutes required witnesses to confront the accused ‘face to face’ at his arraignment. Courts, meanwhile, developed relatively strict rules of unavailability, admitting examinations only if the witness was demonstrably unable to testify in person. Several authorities also stated that a suspect’s confession could be admitted only against himself, and not against others he implicated. *Id.* at 44–45 (citations omitted).
22. *Id.* at 51; cf. Jeffrey L. Fisher, Essay, *Crawford v. Washington: The Next Ten Years*, 113 MICH. L. REV. FIRST IMPRESSIONS 9, 10 (2014) (“The testimonial approach starts from the premise that the Confrontation Clause is not a rule of evidence but rather one of criminal procedure.”).
court testimony.23 Justice Scalia left setting out a “comprehensive definition of ‘testimonial’” for “another day” but noted that whatever its definition, it applied to police interrogations and prior testimony at a former trial, before a grand jury, and at a preliminary hearing.24 On the facts of the case, Justice Scalia found that admission of Crawford’s wife’s statements without the opportunity for cross-examination violated the Confrontation Clause.25

Chief Justice Rehnquist, in an opinion joined by Justice O’Connor, decried the Court’s overruling of Roberts and “adoption of a new interpretation of the Confrontation Clause [that] is not backed by sufficiently persuasive reasoning to overrule long-established precedent.”26 He believed that the new interpretation was unnecessary for deciding the case and that the Court had “cast[ ] a mantle of uncertainty over future criminal trials.”27 The Chief Justice noted that while the Court chose not to provide a comprehensive definition for “testimonial,” state and federal prosecutors needed answers now—not months or even years from now—on what the term covers aside from the specific examples the Court had enumerated.28

23. Crawford, 541 U.S. at 51–52. The Court noted as follows:

Various formulations of this core class of “testimonial” statements exist: “ex parte in-court testimony or its functional equivalent—that is, material such as affidavits, custodial examinations, prior testimony that the defendant was unable to cross-examine, or similar pretrial statements that declarants would reasonably expect to be used prosecutorially,” “extrajudicial statements . . . contained in formalized testimonial materials, such as affidavits, depositions, prior testimony, or confessions,” “statements that were made under circumstances which would lead an objective witness reasonably to believe that the statement would be available for use at a later trial[.]” These formulations all share a common nucleus and then define the Clause’s coverage at various levels of abstraction around it. Regardless of the precise articulation, some statements qualify under any definition—for example, ex parte testimony at a preliminary hearing.

24. Id. at 68; accord Natasha Crawford, Williams v. Illinois: Confronting Experts, Science, and the Constitution, 64 MERCER L. REV. 805, 810 (2013). These, according to Justice Scalia, were the “modern practices with closest kinship to the abuses at which the Confrontation Clause was directed.” Crawford, 541 U.S. at 68.

25. Id. at 68–69.

26. Id. at 69 (Rehnquist, C.J., concurring); see generally Erwin Chemerinsky, Assessing Chief Justice William Rehnquist, 154 U. PA. L. REV. 1331, 1353 (2006) (“In Crawford v. Washington, the Court changed the law, overruled precedent, and provided more protections under the Confrontation Clause of the Sixth Amendment by limiting hearsay testimony that could be used against criminal defendants.”).

27. Crawford, 541 U.S. at 69 (Rehnquist, C.J., concurring). The Chief Justice noted that in his view, “[i]n the Court’s distinction between testimonial and nontestimonial statements, contrary to its claim, is no better rooted in history than our current doctrine.” Id.

28. Id. at 75.
After *Crawford*, the Court would attempt to devise an approach for determining when a given statement would be testimonial. That approach came to focus on the statement’s objective primary purpose.

**B. The Primary Purpose Test**

The Court has come to rely on analyzing the objective primary purpose of a statement to determine whether such statement should be considered testimonial. The Court developed this test in *Davis v. Washington* and *Michigan v. Bryant*, and has since applied it in cases like *Ohio v. Clark*.

In *Davis*, the Court created an “emergency” exception to the class of testimonial statements. *Davis* called upon the Court to rule on two consolidated appeals: (1) *State v. Davis*, which concerned the state seeking to admit statements made to a 911 operator before police arrived on the scene; and (2) *Hammon v. State*, which concerned the state seeking to admit statements made by an alleged victim after police arrived on the scene and the alleged perpetrator appeared under control. Justice Scalia authored the Court’s opinion and stated as follows:

> Without attempting to produce an exhaustive classification of all conceivable statements—or even all conceivable statements in response to police interrogation—as either testimonial or nontestimonial, it suffices to decide the present cases to hold as follows: Statements are nontestimonial when made in the course of police interrogation under circumstances objectively indicating that the primary purpose of the interrogation is to enable police assistance to meet an ongoing emergency. They are testimonial when the circumstances objectively indicate that there is no such ongoing emergency, and that the primary purpose of the interrogation is to establish or prove past events potentially relevant to later criminal prosecution.

Applying this standard, the Court found that the statements to the 911 operator in *State v. Davis* were nontestimonial since “the circum-

29. Jeffrey Bellin, *The Incredible Shrinking Confrontation Clause*, 92 B.U. L. REV. 1865, 1867 (2012) (“As ambitious as the case was, *Crawford* only mapped out the rough contours of the long-awaited Confrontation Clause revolution, leaving a number of important questions ‘for another day.’”).
33. *See generally Davis*, 547 U.S. at 822.
37. *Id.* at 817, 822. For purposes of its decision, the Court considered the 911 operator in *State v. Davis* an agent of law enforcement. *See id.* at 823 n.2.
stances of [the declarant’s] interrogation objectively indicate[d] its primary purpose was to enable police assistance to meet an ongoing emergency” and the declarant was not simply “a weaker substitute for live testimony at trial.”38 In contrast, the statements in Hammon were testimonial since “the circumstances [indicated] that the interrogation was part of an investigation into possibly criminal past conduct,” no emergency was in progress, and the statements were “an obvious substitute for live testimony.”39

Justice Thomas wrote an opinion concurring in part and dissenting in part, criticizing the Court’s adoption of the primary purpose test.40 In addition to the test being hard for the courts to apply, Justice Thomas felt that it characterized as “testimonial,” and thus inadmissible, evidence that bore little resemblance to the type of evidence the Court had previously determined was targeted by the Confrontation Clause.41 Justice Thomas set out his formality and solemnity view, pursuant to which “statements regulated by the Confrontation Clause must include ‘extrajudicial statements . . . contained in formalized testimonial materials, such as affidavits, depositions, prior testimony, or confessions.’”42 He also previewed the so-called “mixed motives” problem—which would be discussed further in Bryant—by stating as follows:

In many, if not most, cases where police respond to a report of a crime, whether pursuant to a 911 call from the victim or otherwise, the purposes of an interrogation, viewed from the perspective of the police, are both to respond to the emergency situation and to gather evidence. Assigning one of these two “largely unverifiable motives,” primacy requires constructing a hierarchy of purpose that will rarely be present—and is not reliably discernible. It will inevitably be, quite simply, an exercise in fiction.43

In Bryant, the Court further developed its primary purpose approach and sought to address the mixed motives problem. Bryant con-

38. Id. at 828 (internal quotation marks omitted) (quoting United States v. Inadi, 475 U.S. 387, 394 (1986)). The Court noted that in cases like Sir Walter Raleigh’s and others, “the ex parte actors and the evidentiary products of the ex parte communication aligned perfectly with their courtroom analogues. [The State v. Davis declarant’s] emergency statement does not. No ‘witness’ goes into court to proclaim an emergency and seek help.” Id.
39. Id. at 829–30 (Thomas, J., concurring in part and dissenting in part).
40. Id. at 834.
41. Id.
42. Id. at 836 (citation omitted). Justice Thomas would come to repeat this formality and solemnity view in future cases, but it has, so far, not gained much traction with the other Justices. E.g., Michigan v. Bryant, 562 U.S. 344, 378–79 (2011) (Thomas, J., concurring).
43. Id. at 839 (internal citations omitted) (alterations in original). As will be discussed further below, the mixed motives problem arises where, for instance, an interrogator has more than one motivation in asking questions and a declarant has more than one motivation in answering such questions or otherwise making statements. Bryant, 562 U.S. at 367–69 (2011).
cerned attempted use of statements made by an alleged victim to police who found the victim mortally wounded in the parking lot of a gas station. The declarant-victim did not appear at trial, since he had passed away, but the police officers who had spoken to the victim on the scene testified as to what the victim had told them. Justice Sotomayor, writing for the Court, built upon the *Davis* principles:

> When, as in *Davis*, the primary purpose of an interrogation is to respond to an “ongoing emergency,” its purpose is not to create a record for trial and thus is not within the scope of the [Confrontation] Clause. But there may be *other* circumstances, aside from ongoing emergencies, when a statement is not procured with a primary purpose of creating an out-of-court substitute for trial testimony. In making the primary purpose determination, standard rules of hearsay, designed to identify some statements as reliable, will be relevant. Where no such primary purpose exists, the admissibility of a statement is the concern of state and federal rules of evidence, not the Confrontation Clause.

The Court also noted that the situation in *Bryant* was different from that in *Davis* and thus required further clarification of the emergency exception from *Davis*:

> We now face a new context: a nondomestic dispute, involving a victim found in a public location, suffering from a fatal gunshot wound, and a perpetrator whose location was unknown at the time the police located the victim. Thus, we confront for the first time circumstances in which the “ongoing emergency” discussed in *Davis* extends beyond an initial victim to a potential threat to the responding police and the public at large.

In making the determination of whether the primary purpose of a given interrogation would be to assist an ongoing emergency, the Court said it would “objectively evaluate the circumstances in which the encounter occurs and the statements and actions of the parties.”

The Court recognized the mixed motives problem, pursuant to which interrogators might have more than one motivation in asking questions and declarants might have more than one motive in making statements. It stated that in many circumstances, the primary pur-

44. *Id.* at 348.
45. *Id.* at 348–50.
46. *Id.* at 358–59 (alterations in original).
47. *Id.* at 359.
48. *Id.*
49. *Id.* at 367–69. Said the Court:

> Police officers in our society function as both first responders and criminal investigators. Their dual responsibilities may mean that they act with different motives simultaneously or in quick succession. Victims are also likely to have mixed motives when they make statements to the police. During an ongoing emergency, a victim is most likely to want the threat to her and to other potential victims to end, but that does not necessarily mean that the victim wants or envisions prosecution of the assailant. A victim may want the
pose would be best ascertained by looking at the contents of questions and answers. By taking the combined approach, the Court reasoned, problems arising from looking only to one participant—such as the mixed motives problem—could be ameliorated. On the facts of Bryant, the Court determined that the emergency exception applied, and the victim’s statements were nontestimonial.

Justice Thomas authored a concurring opinion, again relying on his formality and solemnity view. He determined that the statements lacked sufficient formality and so would not be testimonial.

Justice Scalia dissented, charging the Court with having reached a “patently incorrect conclusion on the facts” and having “distort[ed] our Confrontation Clause jurisprudence.”

Id. at 368–69 (internal citation omitted).

50. Id. at 367–68. The Court provided an “extreme” example:

[I]f the police say to a victim, “Tell us who did this to you so that we can arrest and prosecute them,” the victim’s response that “Rick did it” appears purely accusatory because by virtue of the phrasing of the question, the victim necessarily has prosecution in mind when she answers.

Id. at 368.

51. Id.

52. Id. at 377–78. Justice Kagan did not take part in the consideration or decision in Bryant. Id. at 378.

53. Id. at 378–79 (Thomas, J., concurring). Justice Thomas also again criticized the Court’s primary purpose test. Id. at 379.

54. Id. at 379–80 (Scalia, J., dissenting); see also David Crump, Overruling Crawford v. Washington: Why and How, 88 NOTRE DAME L. REV. 115, 132–37 (2012) (discussing issues with the primary purpose test and arguing that Bryant “is a compelling illustration of the unworkability that is built into the Crawford rationale”); Richard D. Friedman & Jeffrey L. Fisher, The Frame of Reference and Other Problems, 113 MICH. L. REV. FIRST IMPRESSIONS 43, 45 (2014) (“We agree that it is confusing to speak of an actor’s primary purpose ‘objectively considered.’ Purpose is a subjective matter. But this aspect of the problem would disappear if the Court spoke, as we believe it should, in terms of reasonable anticipation—rather than purpose—of prosecutorial use.” (emphasis in original)). Justice Ginsburg wrote a separate dissenting opinion, which agreed with portions of Justice Scalia’s dissent. Bryant, 562 U.S. at 395 (Ginsburg, J., dissenting). She also emphasized that had the issue been properly tendered in Bryant, she would have considered whether the dying declarations exception survived the Court’s recent Confrontation Clause jurisprudence. Id.

55. Id. at 381 (Scalia, J., dissenting). Justice Scalia noted that in Crawford and Davis, the statements were testimonial when viewed from any perspective, and he believed the same was true in Bryant. Id.
strongly disagreed with the Court’s combined approach and instead believed it was the declarant’s intention which should count. Justice Scalia proclaimed himself “at a loss to know how” the Court’s approach would ameliorate the mixed motives problem since adding the mixed motives of police officers to the mixed motives of declarants would only compound the problem. He also, among other things, blasted the Court’s new “expansive exception to the Confrontation Clause for violent crimes” and its “resurrected interest in reliability.”

56. Id. According to Justice Scalia:

For an out-of-court statement to qualify as testimonial, the declarant must intend the statement to be a solemn declaration rather than an unconsidered or offhand remark; and he must make the statement with the understanding that it may be used to invoke the coercive machinery of the State against the accused. That is what distinguishes a narrative told to a friend over dinner from a statement to the police. The hidden purpose of an interrogator cannot substitute for the declarant’s intentional solemnity or his understanding of how his words may be used.

Id. (internal citations omitted).

57. Id. at 383. In this regard, Justice Scalia noted as follows:

Now courts will have to sort through two sets of mixed motives to determine the primary purpose of an interrogation. And the Court’s solution creates a mixed-motive problem where (under the proper theory) it does not exist—viz., where the police and the declarant each have one motive, but those motives conflict. The Court does not provide an answer to this glaringly obvious problem, probably because it does not have one.

Id.; see also Crump, supra note 54, at 132–34 (“Because the state of mind of a declarant may include mixed motives, it is only by focusing on the primary purpose of the statement that the court can achieve consistent results and . . . avoid appearing as a collection of amateur mind-readers.”).

58. Bryant, 562 U.S. at 388, 392 (Scalia, J., dissenting). Noted Justice Scalia:

Because Bryant posed a continuing threat to public safety in the Court’s imagination, the emergency persisted for confrontation purposes at least until the police learned his “motive for and location after the shooting.” It may have persisted in this case until the police “secured the scene of the shooting” [two-and-a-half] hours later. (The relevance of securing the scene is unclear so long as the killer is still at large—especially if, as the Court speculates, he may be a spree killer.) This is a dangerous definition of emergency. Many individuals who testify against a defendant at trial first offer their accounts to police in the hours after a violent act. If the police can plausibly claim that a “potential threat to . . . the public” persisted through those first few hours, (and if the claim is plausible here it is always plausible) a defendant will have no constitutionally protected right to exclude the uncross-examined testimony of such witnesses. His conviction could rest (as perhaps it did here) solely on the officers’ recollection at trial of the witnesses’ accusations.

Id. at 388–89 (internal citations omitted).

59. Id. at 388–92. In terms of reliability, Justice Scalia argued,

Reliability tells us nothing about whether a statement is testimonial. Testimonial and nontestimonial statements alike come in varying degrees of reliability. An eyewitness’s statements to the police after a fender-bender, for example, are both reliable and testimonial. Statements to the police from one driver attempting to blame the other would be similarly testimonial but rarely reliable.

2021] CONFRONTATION’S MULTI-ANALYST PROBLEM 175
More recently, in Clark, the Court considered the primary purpose approach in the child abuse context. Darius Clark had sent his girlfriend “away to engage in prostitution” and said he would care for her children while she was gone. One day later, a teacher noticed, among other things, red marks on the girlfriend’s three-year-old son, and the son identified Clark as the abuser. The teacher alerted authorities through a child abuse hotline. At trial, the prosecution introduced the son’s statements to his teachers, and Clark was found guilty on several counts of felonious assault. The question for the Court was whether admission of the boy’s statements when he was unavailable to be cross-examined violated the Confrontation Clause.

Justice Alito, for the Court, determined that, since neither the teachers nor the boy had the primary purpose of assisting in the prosecution of Clark, the boy’s statements did not violate the Confrontation Clause and were admissible. Justice Alito noted that, because at least certain statements to individuals other than law enforcement officers conceivably could raise Confrontation Clause concerns, the Court would refrain from adoption of a categorical rule excluding such statements from Confrontation Clause protection. However, such statements, according to the Court, were “much less likely” to be found testimonial. The Court considered the boy’s statements in Clark nontestimonial since (1) they were made to his teachers, not law enforcement; (2) they occurred in connection with an ongoing emergency of suspected child abuse; (3) there was no indication that the conversation’s primary purpose was to gather evidence to prosecute Clark; (4) “statements by very young children [ ] rarely, if ever, implicate[d] the Confrontation Clause”; and (5) there was “strong evidence” that statements made in similar circumstances to those in Clark were admitted at common law. As to this last point, the Court

Id. at 392 (emphasis in original).

61. Clark, 576 U.S. at 240. Clark was his girlfriend’s pimp. Id.

62. Id. at 241. The son had apparently referred to Clark by his nickname of “Dee” in the identification. Id. Additional injuries were subsequently discovered. Id.

63. Id. at 241–42.

64. Id. at 242.

65. Id. at 240, 246–47. The son did not testify because the trial court found him incompetent to testify. Id. at 241–42. Under Ohio law, “children younger than 10 years old are incompetent to testify if they ‘appear incapable of receiving just impressions of the facts and transactions respecting which they are examined, or of relating them truly.’” Id. (citation omitted).

66. Id. at 240. The Court found Clark’s arguments to the contrary unavailing. Id. at 247–50.

67. Id. at 246.

68. Id.

69. Id. at 246–48.
noted that the primary purpose test was a necessary—but not sufficient—condition for Confrontation Clause exclusion since the Clause did “not prohibit the introduction of out-of-court statements that would have been admissible in a criminal case at the time of the founding.”

Justice Scalia authored a concurring opinion, which Justice Ginsburg joined. He wrote separately to “protest the Court’s shoveling of fresh dirt upon the Sixth Amendment right of confrontation so recently rescued from the grave in [Crawford].” He took issue with, for instance, the Court’s characterization of Crawford and with the suggestion that the primary purpose test was a necessary, but not sufficient, condition. Justice Scalia did emphasize his agreement with the Court’s refusal to determine two questions unnecessary to the Court’s holding:

what effect Ohio’s mandatory-reporting law has in transforming a private party into a state actor for Confrontation Clause purposes, and whether a more permissive Confrontation Clause test—one less likely to hold the statements testimonial—should apply to interrogations by private actors.

Still, Justice Scalia concluded that the statements in Clark would be nontestimonial pursuant to the normal test for police interrogations. Justice Thomas also concurred and stated he would not have applied the primary purpose test in Clark. Instead, he would apply the same test for statements to law enforcement agents as he applies to private persons: “assessing whether those statements bear sufficient indicia of solemnity to qualify as testimonial.” He concluded that the son’s statements did not bear the requisite indicia of solemnity and were nontestimonial.

Even following Clark, a great deal of uncertainty remains in the application of the primary purpose test. However, one of the most
difficult issues the Supreme Court has had to face in the Confrontation Clause context is the challenge presented by forensic reports.

C. The Forensic Reports Challenge

The application of the Confrontation Clause to forensic reports has proved particularly divisive in the U.S. Supreme Court. The Court considered this issue in a series of three cases: (1) Melendez–Diaz v. Massachusetts; 80 (2) Bullcoming v. New Mexico; 81 and (3) Williams v. Illinois. 82 We refer to this series of cases as the “Melendez–Diaz Trilogy.”

In Melendez–Diaz, Luis Melendez–Diaz had been convicted on drug charges for selling cocaine. 83 At trial, the state entered into evidence seized bags allegedly containing narcotics along with three “certificates of analysis”; these certificates reflected the results of forensic analysis showing the substance in the bags contained cocaine, and they had been sworn before a notary public pursuant to state law. 84 Melendez–Diaz raised a Confrontation Clause objection, arguing that Crawford required the forensic analysts to testify at trial, but his objection was overruled. 85 After appeals, the Supreme Court agreed to hear the case. 86

Justice Scalia, for the Court, held that admitting the certificates was a violation of the Confrontation Clause. 87 For Justice Scalia, deciding the case required “little more” than applying the Court’s holding in Crawford. 88 The Court determined that the certificates at issue were “quite plainly affidavits” and had “little doubt” they fell “within the

---

(2) Whose purpose should be considered more significant—a declarant or a questioner—if their purposes are materially different?
(3) What does it mean that the purpose should be determined “objectively” from the standpoint of a “reasonable person” under the same circumstances?
(4) Could volunteered statements without interrogation constitute a Confrontation Clause violation?
(5) And should a court break statements down into component parts so that each part may be separately scrutinized under the primary purpose test?

Paul F. Rothstein, A Comment on the Supreme Court’s Decision in Ohio v. Clark, CASETEXT (June 19, 2015), https://casetext.com/analysis/a-comment-on-the-supreme-courts-decision-in-ohio-v-clark [https://perma.cc/3URQ-UVAE] [hereinafter Comment on Clark].

core class of testimonial statements” described in Crawford. The Court also found that the analysts were “witnesses” for Confrontation Clause purposes, and absent unavailability and a prior opportunity for cross-examination, Melendez–Diaz had a right to confront them at trial.

Justice Thomas authored a concurring opinion, again reiterating his formality and solemnity view. In the instant case, he agreed with the Court’s opinion that the certificates were affidavits and that they were testimonial.

Justice Kennedy was joined by Chief Justice Roberts and Justices Alito and Breyer in the dissent. Justice Kennedy charged the Court with having “[swept] away” a long established rule under which scientific analysis could be admitted without the analyst who produced the analysis testifying. Most concerning, according to Justice Kennedy, was that the Court had made no attempt to acknowledge the differences between conventional witnesses and laboratory analysts performing scientific tests. The dissent considered “ordinary” or conventional witnesses—such as those in Crawford and Davis—the targets of the Confrontation Clause. It argued that the Court’s ruling was “divorced from precedent, common sense, and the underlying purpose of the [Confrontation] Clause” and had the “vast potential to disrupt criminal procedures that already give ample protections against the misuse of scientific evidence.”

89. Melendez–Diaz, 557 U.S. at 310–311 (quotation marks omitted). The Court noted that the certificates were “functionally identical to live, in-court testimony,” and not only were they created under circumstances leading an objective witness to reasonably believe they would be available to be used at trial, but their sole purpose under Massachusetts state law was to offer “prima facie evidence.” Id. The Court also assumed the analysts would have been aware of the certificates’ evidentiary purpose since it was reprinted on the certificates themselves. Id. at 311.

90. Id. at 311.
91. Id. at 329–30 (Thomas, J., concurring).
92. Id. at 330.
93. Id. (Kennedy, J., dissenting).
94. Id.
95. Id.
96. Id. at 330–31. Justice Kennedy noted that the word “analyst” does not appear in the Constitution, nor is there any accepted definition of it. Id. at 332; see also Andrew W. Eichner, The Failures of Melendez–Diaz v. Massachusetts and the Unstable Confrontation Clause, 38 AM. J. CRIM. L. 437, 454 (2011) (“Not only does the [Court’s Melendez–Diaz] opinion fail to answer the critical question of how to comprehensively define ‘testimonial’ as left open by Crawford, but the holding also declares that ‘analysts’ who submit scientific affidavits for the purposes of a trial are witnesses giving testimonial statements under the Sixth Amendment without actually defining the characterizing traits that dictate exactly who falls within that category.”). Justice Scalia and the majority were unpersuaded that scientific analysts who create reports should be treated differently than conventional witnesses for confrontation purposes. See Melendez–Diaz, 557 U.S. at 315–24.
97. Id. at 331–32 (Kennedy, J., dissenting).
Importantly, the dissent also argued, among other things, that the Court’s ruling did not make clear who among a string of analysts involved in a test would be required to testify. The dissenters offered the example of a routine drug test involving four individuals: (1) an individual who prepares the sample, puts it in a machine, and retrieves the printout from the machine (often a graph); (2) an individual who interprets the graph; (3) an individual who calibrates the machine and certifies it is in working order; and (4) an individual such as a director who certifies that any subordinates followed procedures. Requiring even one such analyst to testify would “disrupt if not end many prosecutions,” and if all were required to testify, the Court had, “for all practical purposes, forbidden the use of scientific tests in criminal trials.”

The majority opinion in the case responded to the dissent’s critique regarding the involvement of multiple analysts:

Contrary to the dissent’s suggestion, we do not hold, and it is not the case, that anyone whose testimony may be relevant in establishing the chain of custody, authenticity of the sample, or accuracy of the testing device, must appear in person as part of the prosecution’s case. While the dissent is correct that “[i]t is the obligation of the prosecution to establish the chain of custody,” this does not mean that everyone who laid hands on the evidence must be called. As stated in the dissent’s own quotation, “gaps in the chain [of custody] normally go to the weight of the evidence rather than its admissibility.” It is up to the prosecution to decide what steps in the chain of custody are so crucial as to require evidence; but what testimony is introduced must (if the defendant objects) be introduced live. Additionally, documents prepared in the regular course of equipment maintenance may well qualify as nontestimonial records.

This question of which analyst must testify would be partially addressed in the second case in the Melendez–Diaz Trilogy: Bullcoming.

98. See id. at 332.

(2010), https://harvardlpr.com/online-articles/the-confrontation-clause-and-the-ongoing-fight-to-limit-melendez-diaz/ (While Melendez–Diaz stated that admission of a forensic report requires accompanying testimony by an analyst, the Court did not specify which analyst, or analysts, would be required to testify—although both the majority and the dissent noted the importance of this issue.”); Grabbing the Bullcoming, supra note 5, at 535–38 (providing example of typical toxicology test involving up to five individuals).
101. Melendez–Diaz, 557 U.S. at 311 n.1 (emphasis added and internal citations omitted). Justice Scalia also responded to the dissent’s dire predictions by arguing that the Confrontation Clause could not be “disregard[ed] . . . at our convenience” and by doubting those dire predictions. Id. at 325.
In *Bullcoming*, Donald Bullcoming had been arrested for driving while intoxicated, and the prosecution sought to use a lab report at trial certifying that Bullcoming’s blood alcohol concentration (“BAC”) exceeded the relevant threshold.\(^{102}\) The BAC analysis underlying the lab report utilized a gas chromatograph machine, and operation of the machine required specialized knowledge and training.\(^{103}\) At trial, rather than calling the analyst who signed the certification as a witness, the prosecution instead offered testimony from a different analyst.\(^{104}\) This testifying analyst had familiarity with testing procedures at the lab but did not observe or participate in the actual test on Bullcoming’s sample.\(^{105}\) The New Mexico Supreme Court considered the BAC analysis testimonial in light of *Melendez–Diaz* but determined that the testimony of the testifying analyst was sufficient for the Confrontation Clause.\(^{106}\) First, the court reasoned that the analyst who certified the report was a “mere scrivener” who had simply transcribed results from the machine.\(^{107}\) Second, the court found that the qualified expert witness who testified could serve as a “surrogate” witness for the analyst who certified the report.\(^{108}\) The U.S. Supreme Court granted certiorari and reversed the New Mexico Supreme Court.\(^{109}\)

Justice Ginsburg, writing for the Court, determined that admission of the report was a violation of the Confrontation Clause.\(^{110}\) It was impermissible, said the Court, to admit a testimonial statement of one individual (the certifying analyst) through the trial testimony of a separate individual (the testifying analyst).\(^{111}\) The certifying analyst was more than a “mere scrivener” since he made several representations regarding the sample not revealed by the machine-produced data.\(^{112}\) Moreover, the “surrogate” testimony of the testifying analyst was insufficient since it could not reveal what the certifying analyst observed or knew about the actual test or testing process employed.\(^{113}\) Nor could the surrogate testimony uncover any “lapses or lies” by the cer-

\(^{111}\) Id. at 657–58. This is so absent unavailability and a prior opportunity for cross-examination, of course. Id. at 657.

\(^{112}\) Id. at 659–60.

\(^{113}\) Id. at 661.
Finally, the Court considered the assertions in the BAC report testimonial, notwithstanding that the report was unsworn.\(^{115}\)

The same four Justices who had dissented in *Melendez–Diaz* also dissented in *Bullcoming*.\(^{116}\) Writing again for the dissent, Justice Kennedy noted that some of its principal objections to the Court’s underlying theory had been set out in its *Melendez–Diaz* dissent, so there was no need to repeat them.\(^{117}\) The dissent also felt that—whether or not one agreed with *Melendez–Diaz*—it was wrong to extend such holding to cover the situation in *Bullcoming*.\(^{118}\) The dissent charged that, before its *Bullcoming* opinion, the Court had never found that the Confrontation Clause would bar admission of scientific findings where an employee from the relevant lab authenticated the findings, testified on the lab’s practices and methods, and was cross-examined at trial.\(^{119}\)

The dissent also took time to emphasize that the information in the report resulted from a scientific process involving multiple participants’ acts, including (1) receiving the sample; (2) recording its receipt; (3) storing the sample; (4) placing it into the testing device; (5) transposing the test results’ printout onto the report; and (6) reviewing the results.\(^{120}\) The record revealed, according to the dissent, that the role of the certifying analyst in *Bullcoming* was “no greater than that of anyone else in the chain of custody.”\(^{121}\) The dissent further charged,

> It is not even clear which witnesses’ testimony could render a scientific report admissible under the Court’s approach. *Melendez–Diaz* stated an inflexible rule: Where “analysts’ affidavits” included “testimonial statements,” defendants were “entitled to be confronted

---

114. *Id.* at 661–62. The Court found it significant that the certifying analyst had been put on unpaid leave, and the testifying analyst lacked knowledge of the reasons for that. *Id.* at 662. The Court also emphasized that there was no assertion that the testifying analyst held any “independent opinion” as to Bullcoming’s BAC. *Id.*

115. *Id.* at 664–65. In a portion of Justice Ginsburg’s opinion not constituting the opinion of the Court, Justice Ginsburg also rejected arguments “that unbending application of the Confrontation Clause to forensic evidence would impose an undue burden on the prosecution.” *Id.* at 665.

118. *Id.* (noting that “because [the testifying analyst in *Bullcoming*] was not the analyst who filled out part of the form and transcribed onto it the test result from a machine printout, the Court finds a confrontation violation”).

119. *Id.* at 675. The dissent also, among other things, criticized the Court for permitting certain principles—such as solemnity—to “weave[ ] in and out of the *Crawford* jurisprudence” and for fashioning an approach under which it was “not even clear which witnesses’ testimony could render a scientific report admissible.” *Id.* at 678–79.

120. *Id.* at 676.

121. *Id.*
with the analysts” themselves. Now, the Court reveals, this rule is either less clear than it first appeared or too strict to be followed. A report is admissible, today’s opinion states, if a “live witness competent to testify to the truth of the statements made in the report” appears. Such witnesses include not just the certifying analyst, but also any “scientist who . . . perform[ed] or observe[d] the test reported in the certification.”122

The dissent noted that the Court in Melendez–Diaz had insisted its opinion did not “require everyone in the chain of custody to testify” but had then “qualified that ‘what testimony is introduced must . . . be introduced live.’”123 According to the dissent:

This could mean that a statement that evidence remained in law-enforcement custody is admissible if the statement’s maker appears in court. If so, an intern at police headquarters could review the evidence log, declare that chain of custody was retained, and so testify. The rule could also be that the intern’s statement—which draws on statements in the evidence log—is inadmissible unless every officer who signed the log appears at trial. That rule, if applied to Bullcoming, would have conditioned admissibility of the report on the testimony of three or more identified witnesses. In other instances, 7 or even 40 witnesses could be required. The court has thus—in its fidelity to Melendez–Diaz—boxed itself into a choice of evils: render the Confrontation Clause pro forma or construe it so that its dictates are unworkable.124

Justice Sotomayor authored a concurrence in which she, among other things, emphasized the limitations of the Court’s opinion.125 Specifically, Justice Sotomayor articulated four “factual circumstances” not presented in Bullcoming, which implied that she might theoretically have come out differently had any such circumstances been present.126 First, Bullcoming was not a case in which the prosecution had suggested an alternative purpose for the BAC report.127 Second, Bullcoming did not present the situation of a “supervisor, reviewer, or someone else with a personal, albeit limited, connection to the scientific test” taking the stand.128 Third, Bullcoming was not a case in which the expert witness was asked to provide her independent opinion regarding underlying testimonial reports which were not,

123. Id. at 679–80 (emphasis in original).
124. Id. at 680 (internal citations omitted); see also John Rafael Peña Perez, Confronting the Forensic Confirmation Bias, 33 YALE L. & POL’Y REV. 457, 466 (2015) (“Melendez–Diaz and Bullcoming created line-drawing problems because anywhere from six to twelve analysts could be involved with the procedures of a single forensic test.”).
125. Bullcoming, 564 U.S. at 668 (Sotomayor, J., concurring).
126. See id. at 668, 672–74.
127. Id. at 672. For instance, the prosecution had not argued the report was necessary for Bullcoming’s medical treatment. Id.
128. Id. at 672–73.
themselves, admitted. Fourth, Bullcoming did not present a situation in which the prosecution sought to simply introduce machine-generated results, such as a gas chromatograph’s printout. Justice Sotomayor also emphasized that the Court’s opinion did not mean that everyone noted on the report needed to testify.

In Williams—the final case in the Melendez–Diaz Trilogy—the Court was asked to consider a case quite similar to Justice Sotomayor’s third hypothetical in Bullcoming: “an expert witness . . . asked for [an] independent opinion about [an] underlying testimonial report[ ]” not itself admitted. The defendant, Sandy Williams, had been convicted of rape after a bench trial. During the trial, the prosecution had called Sandra Lambatos, an expert, to testify that a DNA profile, which was produced by Cellmark, an outside laboratory, matched a DNA profile that the state’s police laboratory produced using a sample of the defendant’s blood. The Cellmark report was never admitted, nor was it shown to the factfinder. Lambatos did not read from, or quote, the Cellmark report, and she never identified it as the source of opinions she expressed. Lambatos also provided an explanation of the notations on certain documents which were admitted as business records, testifying that, according to the records, swabs from the victim had been sent to, and received from, Cellmark. Lambatos did not make any other statement offered for the purposes of identification of the sample used to derive the profile or for purposes of establishing how Cellmark tested or used the sample. Nor had Lambatos vouched for the accuracy of Cellmark’s profile. On cross-examination, Lambatos did admit that she had not conducted or observed the vaginal swab testing and that she relied on the Cellmark DNA profile for her testimony.

Williams contended that the expert’s testimony violated the Confrontation Clause. According to the Court’s plurality opinion, Williams’s main argument was that “the expert went astray when she

129. Id. at 673 (noting Federal Rule of Evidence 703 explained “that facts or data of a type upon which experts in the field would reasonably rely in forming an opinion need not be admissible in order for the expert’s opinion based on the facts and data to be admitted”).
130. Id. at 673–74. For a more detailed discussion of the state of the law before and after Bullcoming, see generally Grabbing the Bullcoming, supra note 5, at 518–24.

referred to the DNA profile provided by Cellmark as having been produced from semen found on the victim’s vaginal swabs.”

Justice Alito wrote the plurality opinion, which the other Melendez–Diaz dissenting Justices joined.\textsuperscript{143} The plurality found no Confrontation Clause violation in Lambatos testifying for two independent reasons.\textsuperscript{144} First, out-of-court statements related by an expert solely for purposes of explaining assumptions on which the expert’s opinion rested were not offered for their truth.\textsuperscript{145} Justice Alito stated as follows:

\begin{quote}
[T]he Cellmark report was not introduced into evidence. An expert witness referred to the report not to prove the truth of the matter asserted in the report, \textit{i.e.}, that the report contained an accurate profile of the perpetrator’s DNA, but only to establish that the report contained a DNA profile that matched the DNA profile deduced from petitioner’s blood. Thus, . . . the report was not to be considered for its truth but only for the “distinctive and limited purpose” of seeing whether it matched something else. The relevance of the match was then established by independent circumstantial evidence showing that the Cellmark report was based on a forensic sample taken from the scene of the crime.\textsuperscript{146}
\end{quote}

Second, even if the Cellmark report had been admitted, there would still be no Confrontation Clause violation since such report “was not prepared for the primary purpose of accusing a targeted individual.”\textsuperscript{147} According to the plurality, the Cellmark report’s primary purpose “was to catch a dangerous rapist who was still at large, not to obtain evidence for use against petitioner, who was neither in custody nor under suspicion at that time.”\textsuperscript{148} Indeed, the plurality noted that those at Cellmark could not possibly have known the profile would inculpate Williams or anyone else who had a DNA profile in the database.\textsuperscript{149} Importantly, Justice Alito noted, among other things, that since multiple technicians often work on each profile, “it [was] likely that the sole purpose of each technician [was] simply to perform his or her task in accordance with accepted procedures.”\textsuperscript{150}

\begin{thebibliography}{99}
\item \textsuperscript{142} Id.

\item \textsuperscript{149} Id. at 84–85. Justice Alito pointed out that the position of the Cellmark technicians was not unique and that laboratory technicians asked to work on DNA profiles “often ha[d] no idea what the consequences of their work w[ould] be.” Id. at 85.
\item \textsuperscript{150} Id. He also mentioned that “the knowledge that defects in a DNA profile may often be detected from the profile itself provides a further safeguard.” Id.
\end{thebibliography}
Justice Thomas authored a concurring opinion. He believed that the Cellmark statements had been offered for their truth but that the report was insufficiently formal to be testimonial. Justice Thomas stated that he “share[d] the dissent’s view of the plurality’s flawed analysis.”

Justice Breyer also wrote separately to emphasize that he would have permitted additional briefing on a question not sufficiently treated by the plurality or the dissent: “How does the Confrontation Clause apply to the panoply of crime laboratory reports and underlying technical statements written by (or otherwise made by) laboratory technicians?” In that context, “what, if any, are the outer limits of the ‘testimonial statements’ rule set forth in [Crawford]?" He noted that under “well-established” evidentiary principles, an expert is entitled to rely on out-of-court inadmissible statements as a basis for the forming of her expert opinion if such statements are of a kind experts in the field would normally rely on, and the prosecution need not enter such out-of-court statements for their truth. In speaking of how the dissent would abandon this “well-established rule,” Justice Breyer noted the following:

Once one abandons the traditional rule, there would seem often to be no logical stopping place between requiring the prosecution to call as a witness one of the laboratory experts who worked on the matter and requiring the prosecution to call all of the laboratory experts who did so. Experts—especially laboratory experts—regularly rely on the technical statements and results of other experts to form their own opinions. The reality of the matter is that the introduction of a laboratory report involves layer upon layer of technical statements (express or implied) made by one expert and relied upon by another. Hence my general question: How does the Confrontation Clause apply to crime laboratory reports and underlying technical statements made by laboratory technicians?

151. Id. at 102–03 (Thomas, J., concurring).
152. Id. at 103–04.
153. Id. at 103. Justice Thomas concluded as follows:

The Cellmark report lacks the solemnity of an affidavit or deposition, for it is neither a sworn nor a certified declaration of fact. Nowhere does the report attest that its statements accurately reflect the DNA testing processes used or the results obtained. The report is signed by two “reviewers,” but they neither purport to have performed the DNA testing nor certify the accuracy of those who did. And, although the report was produced at the request of law enforcement, it was not the product of any sort of formalized dialogue resembling custodial interrogation.

Id. at 111 (internal citations omitted).
154. Id. at 104 (Breyer, J., concurring).
155. Id. at 86.
156. Id.
157. Id. at 88.
158. Id. at 89.
He appended an outline of “the way that a typical modern forensic laboratory conducts DNA analysis” and discussed the following hypothetical example built upon an illustrative case raised by the dissent:

Assume that the admissibility of the initial laboratory report into trial had been directly at issue. Who should the prosecution have had to call to testify? Only the analyst who signed the report noting the [DNA] match? What if the analyst who made the match knew nothing about either the laboratory’s underlying procedures or the specific tests run in the particular case? Should the prosecution then have had to call all potentially involved laboratory technicians to testify? Six to twelve or more technicians could have been involved. Some or all of the words spoken or written by each technician out of court might well have constituted relevant statements offered for their truth and reasonably relied on by a supervisor or analyst writing the laboratory report. Indeed, petitioner’s amici argue that the technicians at each stage of the process should be subject to cross-examination.

Relatedly, Justice Breyer asked, “[t]o what extent might the ‘testimonial statements’ requirement embody one or more (or modified versions) of the[] traditional hearsay exceptions”? He stated that prosecutors, defense attorneys, and judges needed to know what the Constitution required, and he noted that treatise writers and lower courts offered a variety of solutions, some more “readily compatible with Crawford than others.” In the absence of any additional brief-

---

159. Id. at 99–102 (internal citations omitted). According to Justice Breyer’s appendix:

As many as six technicians may be involved in deriving the [DNA] profile from the suspect’s sample; as many as six more technicians may be involved in deriving the profile from the crime-scene sample; and an additional expert may then be required for the comparative analysis, for a total of about a dozen different laboratory experts. Each expert may make technical statements (express or implied) during the DNA analysis process that are in turn relied upon by other experts. The amici dispute how many of these experts the Confrontation Clause requires to be subject to cross-examination.

160. Id. at 100. The appendix provides a sample process for a profile of a suspect’s sample and crime scene sample, each consisting of six steps: (1) evidence examination; (2) extraction; (3) quantification; (4) amplification; (5) electrophoresis; and (6) report. Id. at 100–102 (providing brief descriptions of each step). After the profile processes are complete, an analyst makes a comparison of the two electropherograms and profiles or reports, and “prepares her own report setting forth her conclusions about the DNA match.” Id.

161. Williams, 567 U.S. at 91 (Breyer, J., concurring).

162. Id. at 91–92. Justice Breyer noted, for instance:

The New Wigmore . . . lists several nonexclusive approaches to when testifying experts may rely on testing results or reports by nontestifying experts (i.e., DNA technicians or analysts), including: (1) “the dominant approach,” which is simply to determine the need to testify by looking [at] “the quality
ing, Justice Breyer sided with the dissenting views in *Melendez–Diaz* and *Bullcoming* and joined the plurality opinion. 163

Justice Kagan was joined by Justices Scalia, Ginsburg, and Sotomayor in the dissent. 164 Justice Kagan emphasized that prior Court precedent had held that if the prosecution wished to introduce results of forensic testing, it had to afford the defense an “opportunity to cross-examine an analyst responsible for the test.” 165 According to the dissent, cross-examining the analyst was particularly likely to reveal whether vials had been switched, tests incompetently run, samples contaminated, or results recorded inaccurately. 166 Under the Court’s Confrontation Clause precedent, the dissent considered *Williams* “an open-and-shut case” in which Williams was not afforded his confrontation rights. 167 The dissent also attacked the Court for its inability to settle on a rationale for finding no Confrontation Clause violation. 168 Justice Kagan pointed out that five Justices had specifically rejected each aspect of the plurality’s reasoning and that the result was “five votes to approve the admission of the Cellmark report, but not a single good explanation.” 169

*Williams* represents the Supreme Court’s last major opinion on forensic reports and the Confrontation Clause. Following *Williams*—

of the nontestifying expert’s report, the testifying expert’s involvement in the process, and the consequent ability of the testifying expert to use independent judgment and interpretive skill”; (2) permitting “a substitute expert to testify about forensic science results only when the first expert is unavailable” (irrespective of the lack of opportunity to cross-examine the first expert); (3) permitting “a substitute expert” to testify if “the original test was documented in a thorough way that permits the substitute expert to evaluate, assess, and interpret it”; (4) permitting a DNA analyst to introduce DNA test results at trial without having “personally perform[ed] every specific aspect of each DNA test in question, provided the analyst was present during the critical stages of the test, is familiar with the process and the laboratory protocol involved, reviews the results in proximity to the test, and either initials or signs the final report outlining the results”; (5) permitting the introduction of a crime laboratory DNA report without the testimony of a technician where the “testing in its preliminary stages” only “requires the technician simply to perform largely mechanical or ministerial tasks . . . absent some reason to believe there was error or falsification”; and (6) permitting introduction of the report without requiring the technicians to testify where there is a showing of “genuine unavailability.”

or analysts must testify. The _Chavis_ petition currently pending before the Supreme Court could permit further clarification in this area.

### III. _Chavis_: The Recent Multi-Analyst Petition

In _Chavis v. Delaware_, Dakai Chavis had been convicted of second degree burglary of a ground-floor apartment. During the investigation, police had concluded that the burglar had entered through a bedroom window. The police had also obtained a DNA sample from the apartment window and sent that sample to Bode Cellmark Forensics ("Bode Cellmark"), an out-of-state lab, for analysis. During a search of Chavis’s residence, his mouth was swabbed for DNA, and that sample was also sent to Bode Cellmark. At trial, Sarah Siddons, an analyst from Bode Cellmark, testified that the sample from the bedroom window at the scene of the burglary (referred to as the "crime scene" or "evidence" sample) matched the sample from Chavis (referred to as the "reference" or "known person" sample).

Several analysts from Bode Cellmark had handled both the "crime scene" and "known person" samples and performed steps in the process on them. Siddons performed certain steps in the analysis process of both samples, but she did not witness or participate in all of them. Siddons, among other things, confirmed that the two samples matched and, since she was not involved in certain steps that other analysts performed, "reviewed the case files for both [samples] . . . and confirmed that Standard Operating Procedures were followed."

175. _Id._ at 1082.

176. _Id._ at 1081–82. Bode Cellmark is “a private laboratory in Lorton, Virginia that specializes in forensic DNA testing.” _Id._ at 1082. In collecting the sample, “an evidence-detection specialist used a DNA collection kit supplied by Bode to process the suspected point of entry (a window) at the crime scene, wiping the area of interest with both wet and dry swabs.” _Id._ at 1083. The sample was placed in a sealed envelope and, as far as the court knew, was delivered to the outside lab without incident. _Id._

177. _Id._ at 1081–82. The detective obtained Chavis’s DNA sample “using a collection method known as buccal swabbing, by scraping the inside of Chavis’s cheeks with a Q-tip-like swab to collect skin cells.” _Id._ at 1083. The sample was placed in a sealed envelope and, as far as the court knew, was delivered to the outside lab without incident. _Id._ It should be noted that the “manner in which the investigating officers collected the crime-scene DNA sample and Chavis’s reference sample and delivered those samples to Bode [Cellmark] [wa]s not at issue here.” _Id._

178. _Id._ at 1081–86.

179. _Id._ at 1081.

180. _Id._ at 1081–86 (describing process in respect of each sample and noting relevant analysts).

181. _Id._ at 1086 (internal quotation marks omitted).
Satisfied that the other analysts had performed earlier steps in accordance with Bode Cellmark’s standard operating procedures, and did so competently, Siddons authored a report, which contained the expert opinion she offered at trial.\textsuperscript{182}

Before trial, the state had moved \textit{in limine} to allow introduction of Bode Cellmark’s DNA-testing analysis through the testimony of only Siddons and without the need to produce other Bode Cellmark analysts.\textsuperscript{183} The state also argued that, under Delaware Rule of Evidence 703,\textsuperscript{184} and as an expert, Siddons could “rely on facts and data provided by the other analysts in rendering her opinion.”\textsuperscript{185} Chavis countered that, among other things, Siddons’s assurances that the other analysts performed their analyses competently was insufficient to meet the Confrontation Clause.\textsuperscript{186} Notwithstanding Chavis’s opposition, the court determined that the only “testimonial statements” in Bode Cellmark’s DNA-analysis results were those by Siddons.\textsuperscript{187} As such, Siddons was the only witness who testified in support of the results and conclusions of Bode Cellmark’s DNA testing at trial.\textsuperscript{188}

At trial, Siddons testified in detail regarding the testing steps taken by non-testifying analysts but did not recount any conclusions reached, or statements made, by any such analysts.\textsuperscript{189} Siddons did explain as follows:

[S]he was able to generate one DNA profile from the two evidence samples and a profile from the reference sample. And according to [her], “the male profile obtained from the evidence sample was a match to the male profile from [Chavis’s] reference sample,” matching at all fifteen loci. Siddons’s written report, which was admitted into evidence, noted that “[t]he probability of randomly selecting an unrelated individual with this DNA profile at 15 of 15 loci tested is approximately . . . 1 in 26 quintillion in the U.S. African American population.”\textsuperscript{190}

On appeal, Chavis argued, among other things, that the DNA evidence’s introduction violated his rights under the Confrontation Clause because the prosecution failed to present all analysts who had conducted the DNA analysis.\textsuperscript{191} The Supreme Court of Delaware noted that the parties disagreed as to whether the entries the non-testifying analysts made in the case files regarding their work—upon

\textsuperscript{191}. \textit{Id.} at 1081.
which Siddons relied in generating her report and offering her testimony—were testimonial.\textsuperscript{192} Chavis argued that Siddons made explicit and implicit testimonial statements that Siddons relied upon and relayed to the jury.\textsuperscript{193} The state countered that the non-testifying analysts’ work was not testimonial for several reasons, including (1) “many of the ‘processes for generating DNA profiles [were] automated’”; (2) “the DNA profiles [were] self-verifying because the DNA profiles themselves would have reflected any errors” that were “committed during the DNA testing’s preliminary stages”; (3) the implicit statements by the non-testifying analysts, upon which Siddons relied in her testimonial affidavit, “were insufficiently formal to themselves qualify as testimonial statements”; and (4) Siddons was entitled to rely upon the entries of the non-testifying analysts in the case files because such entries were “facts or data . . . of a type reasonably relied upon by experts in the particular field in forming opinions or inferences upon the subject,” and they thus “need not be admissible in evidence in order for the opinion or inference to be admitted.”\textsuperscript{194}

After considering U.S. Supreme Court precedent, as well as precedent from lower courts, the Supreme Court of Delaware concluded that the entries in the case files from the non-testifying analysts were not testimonial since such entries “did not take the form of statements” that were “designed to serve as a substitute for in-court testimony against Chavis.”\textsuperscript{195} As such, there was no Confrontation Clause violation.\textsuperscript{196} In connection with the U.S. Supreme Court precedent, the Delaware Supreme Court noted that none of the Melendez-Diaz Trilogy was on point in resolving the present case.\textsuperscript{197} The court stated, among other things:

Here, an expert, Siddons, testified to the results of a forensic analysis, but in doing so, relied upon information that experts in her field typically rely upon—case files by other testing analysts who manipulate the DNA samples in order to prepare them for the expert, but who do not themselves analyze the result. Because these other analysts are not testifying as to the final result of the forensic analysis, it is not clear whether their work is testimonial under Melendez-Diaz, which dealt with certificates attesting to the results of the forensic testing. Nor is Siddons a surrogate expert as in Bullcoming—she was herself involved in the preparation and analysis of the two DNA samples. And there is no testimony as to a hypothetical here

CONFRONTATION’S MULTI-ANALYST PROBLEM

[as in Williams]—Siddons worked on both DNA samples and testified as to the results of both.\footnote{198}

However, the court found that Bullcoming and Melendez–Diaz pointed to an “indicator” as to when a statement will be testimonial: “the purpose of the statement in proving an essential element of the crime.”\footnote{199}

The Delaware Supreme Court found its conclusion consistent with its own precedent and precedent from other states.\footnote{200} For instance, the court “tend[ed] to agree” with other states that have reached the conclusion “that analysts who only manipulate the DNA sample and who state that they have followed standard operating procedures in doing so are not making testimonial statements.”\footnote{201}

The Delaware Supreme Court’s opinion continued that, in Chavis, it could not be said that the manipulation of the samples by the non-testifying analysts, or their case file entries, were testimonial.\footnote{202} That the “primary purpose” of their entries was not to substitute for trial testimony or provide evidence “against” Chavis was demonstrated by the fact that they were not offered as trial evidence.\footnote{203} The court emphasized that, based on the available record, the court could not be sure what the statements even were.\footnote{204} It could infer such statements concerned whether the non-testifying analysts followed standard operating procedures, but such statements (i.e., that the analysts “examined and manipulated the DNA swabs in a particular manner”) would not provide testimony “against” Chavis, as is required by the Confrontation Clause.\footnote{205}

Nor, according to the court, would the relevant entries have been offered in order to “show that Chavis committed an act that was an element of the crimes with which [he] was charged.”\footnote{206} Although the DNA profile—which was the “end result” of the combined work of all

\footnote{198} Id. (emphasis in original). The court noted that Siddons performed the quantification, amplification, and electrophoresis steps in connection with the “crime scene” and “known person” samples, in addition to confirming the match. \footnote{Id. at 1085–86.}

\footnote{199} Id. at 1091 (emphasis added). The court noted as follows:

Regrettably, the case files produced by the nontestifying analysts, which Siddons relied upon and which Chavis seems to claim contain the nontestifying analysts’ out-of-court-statements, are absent from the record. But assuming that we could conjure up those statements despite their absence, we could not go so far as to presume that they include assertions of fact tending to prove an essential element of the crimes.

\footnote{Id. (citation omitted). The court found Chavis “falls somewhere between” Williams and Bullcoming; and, unlike in those cases, the testifying analyst in Chavis was “involved in the testing of both DNA samples and . . . certified the results.” \footnote{Id. at 1092.}}

\footnote{200} Id. at 1091–94.

\footnote{201} Id. at 1093.

\footnote{206} Id.
the analysts—was offered to prove the burglar’s identity, “the intermediary steps taken do not themselves prove—or aim to prove—anything.”207 Unable to identify any testimonial statements by the non-testifying analysts, the court determined that Chavis’s Confrontation Clause claim must fail.208

The court stated that this did not mean that the non-testifying analysts’ statements were irrelevant to the opinion Siddons offered.209 To the contrary:

Siddons acknowledged that the other analysts’ adherence to standard operating procedures and their entries in the case files to that effect were essential to her conclusion. But just because a declarant makes an out-of-court statement that may have some relevance to a fact at issue in a criminal trial does not make that declarant a “witness against” the defendant within the meaning of the Sixth Amendment.210

On September 4, 2020, Chavis filed a certiorari petition for U.S. Supreme Court review.211 The Chavis petition, among other things, purported to ask the same question Justice Breyer raised in Williams: “Which analysts must the prosecution call to testify when more than one analyst was involved in testing” the forensic evidence introduced at trial against the defendant?212 It argued that, while an answer to the question presented has never been clear, Williams made the answer less clear and “cast doubt on the precedent” for state and federal courts.213 Chavis argued that, unlike in Williams, the DNA report and testimony in Chavis were entered for their truth and that there was “no issue” of the report’s accusatory nature.214 According to Chavis, when the Delaware Supreme Court found no testimonial statements by the non-testifying analysts, it had ignored that Siddons’s report and testimony contained three testimonial statements—two of which were hearsay—on which she relied and which had been introduced to establish the element of identification215:

In her lab report, Siddons asserts that the reference sample from which the one profile was generated came from the buccal swab of

213. *Id.* at 15–16.
214. *Id.* at 24.
215. *Id.*
Chavis argued that by the time Siddons retrieved the tubes which contained extracted DNA, she was accessing evidence that she could not identify as being provided by law enforcement. Without the non-testifying analysts’ representation, Siddons would not know the “identity” of the samples she used to generate profiles that she compared in the case. Siddons, therefore, incorporated the testimonial statements of the non-testifying analysts as to the samples’ identification, but she then testified to the profiles’ identification as a fact, certifying their truth in her report. Accordingly, Chavis asserted that a “straightforward application” of Bullcoming required the Delaware Supreme Court to conclude that each analyst responsible for a testimonial statement in the report should have been produced.

On March 8, 2021, the U.S. Supreme Court denied certiorari. Justice Gorsuch dissented from the denial of certiorari, noting he “disent[ed] for the reasons set out in [his opinion dissenting from denial of certiorari in] Stuart v. Alabama.” In his opinion dissenting from denial of certiorari in Stuart, which was joined by Justice Sotomayor, Justice Gorsuch had referred to the “various opinions [in Williams as] hav[ing] sown confusion in courts across the country” and called for greater “clarity” in the law.

IV. ADDRESSING THE MULTI-ANALYST PROBLEM

Cases such as Chavis and Justice Breyer’s statements in Williams make clear that, notwithstanding the Melendez-Diaz Trilogy, the multi-analyst problem has not yet been resolved. In this Part, we will

216. Id. at 24–25 (internal citations omitted).
217. Id. at 25.
218. Id.
219. Id.
220. Id. at 26. The petition argued as follows:
[B]ecause of the confusion created by Williams, the court’s focus veered toward Siddons’ independent judgement and participation in the process rather than on the testimonial nature of the hearsay statements contained in her report and testimony that was introduced into evidence, who made those statements and whether Chavis was able to confront those individuals.

Id. Chavis also argued that resolving the issue presented in Chavis was important to the administration of justice and that Chavis was a good vehicle to resolve it. Id. at 26–29 (asserting that “[o]ne analyst’s assurances at trial regarding the actions of the other analysts is insufficient to satisfy a defendant’s right to confront and cross-examine those analysts”).
222. Id. (Gorsuch, J., dissenting).
set out six plausible approaches that the Court might consider in addressing this problem.

We note at the outset that our analysis here rests upon several important assumptions. First, we assume, unless and until the Court states otherwise, that *Crawford* and the *Melendez–Diaz* Trilogy remain binding precedent. We note at the outset that our analysis here rests upon several important assumptions. First, we assume, unless and until the Court states otherwise, that *Crawford* and the *Melendez–Diaz* Trilogy remain binding precedent. Second, and flowing from our first assumption, we assume that where testimonial statements are contained in a forensic report and that report is entered into evidence at trial, the accused will generally have the right to confront at least one forensic analyst. Third, we assume that the Court will find that not all analysts in a multi-analyst forensic process need to appear. Indeed, we believe that the Supreme Court—at least as constituted before Justices Gorsuch, Kavanaugh, and Barrett joined the Court—has been searching for a means of mitigating the impact of *Crawford* in forensic report cases and would prefer to limit the number of analysts who must testify. Fourth, and finally, we assume that the Court would gener-

---

224. For instance, the Court could always decide to overrule *Crawford*, but that is beyond the scope of our discussion here. See *Confronting Memory Loss*, supra note 12, at 124 n.189 (noting the possibility of overruling *Crawford*); Crump, supra note 54, at 115, 150 (discussing “overruling of *Crawford*”).

225. It would be highly difficult logistically to produce each and every analyst, and the Court’s opinion in *Melendez–Diaz* emphasized that not all analysts need to testify. See *Melendez–Diaz v. Massachusetts*, 557 U.S. 305, 311 n.1 (2009). Even the late Justice Scalia, one of the great proponents of the right to confront, has noted in a different confrontation context that the “Confrontation Clause guarantees only an opportunity for effective cross-examination, not cross-examination that is effective in whatever way, and to whatever extent, the defense might wish.” United States v. Owens, 484 U.S. 554, 559 (1988) (citation and internal quotation marks omitted). Although *Owens* pre-dates *Crawford*, we will assume *Owens* continues to have relevanc. See *Confronting Memory Loss*, supra note 12, at 120.

226. See *Unwrapping the Box*, supra note 5, at 512–13; Crump, supra note 54, at 150 (“The Court’s most recent confrontation decision [in *Williams*] shows, in operation, the coalition that can overrule *Crawford*—and arguably, this decision does, in fact, overrule it.”). The *Melendez–Diaz* dissenters (Chief Justice Roberts and Justices Kennedy, Breyer, and Alito) constituted the plurality in *Williams*, suggesting that but for precedent, those four Justices may not even have believed a single analyst must testify in order to admit forensic reports consistent with the Confrontation Clause. See *Unwrapping the Box*, supra note 5, at 512–13; *Melendez–Diaz*, 557 U.S. at 330; Williams v. Illinois, 567 U.S. 50, 55 (2012) (plurality opinion). If the plurality had not been able to use its two theories for why the Confrontation Clause did not bar admission of the evidence—i.e., the “not-targeted-person” and “not-for-truth” theories—they might have suggested another theory, such as one based on reliability. See *Unwrapping the Box*, supra note 5, at 512–13 (noting reliability is also mentioned in *Bryant*). Indeed, the dissent in *Williams* suggested that the plurality “desire[d] to limit *Melendez–Diaz* and *Bullcoming* in whatever way possible.” Williams, 567 U.S. at 141 (Kagan, J., dissenting); see also Arons, supra note 5, at 736. Evidence of the Court’s desire to reduce the impact of *Crawford* may also be drawn from the more recent case of *Clark*. Although not a forensic reports case, *Clark*’s majority opinion advances the relatively novel theory that the primary purpose test is not wholly determinative, noting for instance, that the Confrontation Clause does not bar statements which would have been admissible at the founding. *Comment on Clark*, supra note 78; Ohio v. Clark, 576 U.S. 237, 246 (2015) (“We have recognized that the Confrontation Clause does not prohibit the introduction of out-of-court statements that would have been admissible
ally favor a bright-line-type approach—which is easier for lower courts to apply—rather than some type of multi-factor balancing test.\footnote{See Confronting Memory Loss, supra note 12, at 121 n.181 (expressing belief that “the Court would prefer a bright-line approach [as to a different Confrontation Clause issue] due to [the Court’s] criticism of the subjectivity of the Roberts reliability approach” and due to criticism of the “primary purpose” test’s subjectivity).}

A. **Interim Communications Not Testimonial Approach**

One approach that the Court could adopt would be to find that express or implied statements by interim analysts in a forensic process chain are nontestimonial. We refer to this as the “Interim Communications Not Testimonial Approach.”

Under this approach, for instance, the analyst asserting a match between the DNA of the accused and the DNA that was found at the crime scene would normally need to testify. Similarly, the initial analyst or analysts in the chain—who, for instance, can more easily testify as to the source of the samples—would need to testify. In contrast, interim analysts merely making oral or written statements to a subsequent analyst in the forensic process chain would normally not be required to testify.

The rationale for not requiring interim analyst testimony would be that statements to a subsequent analyst in the chain—perhaps concerning what a given analyst has found or done when passing on a sample to the next analyst—would be considered nontestimonial. This approach would presume that these interim statements would normally not be made for the primary purpose of use as evidence at trial and instead would primarily be used for other purposes, such as producing a quality and accurate reading, reflecting what has been done or not done, providing helpful background information, ensuring chain of custody, or noting whether certain lab procedures have been in a criminal case at the time of the founding.”). This theory greatly expands upon the potential dying declaration exception mentioned in a footnote in Crawford, and it might constitute a partial “escape hatch” from the primary purpose test in future cases. Comment on Clark, supra note 79; see Clark, 576 U.S. at 246. In Crawford, the Court stated as follows:

This is not to deny . . . that “[t]here were always exceptions to the general rule of exclusion” of hearsay evidence. Several had become well established by 1791. But there is scant evidence that exceptions were invoked to admit testimonial statements against the accused in a criminal case. Crawford v. Washington, 541 U.S. 36, 56 (2004) (internal citations omitted) (emphasis in original). However, in footnote 6, the Crawford Court recognized an exception for dying declarations. Id. at 56 n.6 (“The one deviation we have found involves dying declarations. The existence of that exception as a general rule of criminal hearsay law cannot be disputed. Although many dying declarations may not be testimonial, there is authority for admitting even those that clearly are. We need not decide in this case whether the Sixth Amendment incorporates an exception for testimonial dying declarations. If this exception must be accepted on historical grounds, it is sui generis.”) (internal citations omitted).
followed. In some circumstances, an interim analyst may not even be aware of why a test is being done. For instance, in a given DNA test, the analysts working on the samples may not know if their work will be used for a murder investigation, paternity test, or to match remains in a mass grave from wartime. In other circumstances, interim analysts may be aware that their statements—or the forensic process of which they are a part—will be used as evidence or in an investigation. However, the individual oral or written statements of such interim analysts would likely still not be for a primarily testimonial purpose. It could also be found that statements of at least certain interim analysts are insufficiently formal to invoke the protections of the Confrontation Clause.

The Interim Communications Not Testimonial Approach could be adapted to fit different definitions of testimonial that the Court may ultimately prefer, particularly: (1) the standard definition: having the “primary purpose” of establishing or proving “past events potentially relevant to later criminal prosecution”; and (2) Justice Alito’s enhanced definition in Williams, which seemingly required the statement to be specifically accusatory of the accused; and (3) the definition of the Delaware Supreme Court in Chavis: “the purpose of the statement in proving an essential element of the crime.” Indeed, the court in

---

228. Subsequent analysts in the forensic chain may assume the work of a prior analyst was accurate, but such subsequent analysts would not actually be asserting this. Such an approach may be seen as consistent with Federal Rule of Evidence 703 and related state analogues as well as with Williams. In fact, the situation under the Interim Communications Not Testimonial Approach may be seen as easier for the Court than the situation in Williams in certain instances since under the Interim Communications Not Testimonial Approach, the interim statements themselves would generally be nontestimonial.

229. See supra Part II (discussing formality and solemnity view of Justice Thomas).

231. See A Game of Katso and Mouse, supra note 4, at 53; Williams v. Illinois, 567 U.S. 50, 58 (2012) (plurality opinion) (“The report was produced before any suspect was identified. The report was sought not for the purpose of obtaining evidence to be used against petitioner, who was not even under suspicion at the time, but for the purpose of finding a rapist who was on the loose. And the profile that Cellmark provided was not inherently inculpatory.”). Justice Alito’s approach would, in certain cases—such as when no perpetrator has been identified—require less analysts to testify. Indeed, in a case where no suspect is identified or even contemplated, perhaps the Court would simply find that no analyst need testify. See A Game of Katso and Mouse, supra note 4, at 53 (discussing Williams’s plurality opinion).

232. Chavis v. Delaware, 227 A.3d 1079, 1091–92 (Del. 2020), cert. denied, 141 S. Ct. 1528 (2021). In a separate part of the opinion, the Delaware Supreme Court al- luded to a seemingly slightly different formulation, when it found that the non-testifying analysts were not testifying to the “final result” of the analysis, meaning it was unclear that their work was testimonial under Melendez-Diaz, a case the court noted concerned certificates which attested to the “result” of forensic analysis. Id. We will assume that this “final result” formulation was intended to be consistent with—rather than distinct from—the Delaware Supreme Court’s “essential element” formulation. Even if the “final result” formulation were distinct, a version of the Interim Communications Not Testimonial Approach could be fashioned to fit it. Under an Interim...
CONFRONTATION’S MULTI-ANALYST PROBLEM  

Chavis seemingly suggested that statements by analysts relating to adherence to protocols or standard procedures—or to the absence of any irregularities—may be nontestimonial.233

Under the Interim Communications Not Testimonial Approach, it would be necessary to identify who is an interim witness not requiring production. We do not believe the Court would find it practical to require proof—perhaps by affidavit—of what each analyst’s primary purpose was in a given case.234 Instead, we assume the Court would adopt a more structured approach for lower courts to utilize. For instance, under an approach using the standard definition of “testimonial,” the Court could set a presumption that the final analyst in the chain—e.g., the ultimate analyst who asserts a match between the alleged killer’s DNA and the DNA from the crime scene—and the first person in the chain—e.g., the analyst responsible for checking the integrity of the packaging and origin of the sample(s)—would need to testify. The Court could then set a presumption that the statements of all other analysts—i.e., the interim analysts—would normally be nontestimonial. Finally, the Court could determine that, if the defense is able to show any statement from an interim analyst had a primary testimonial purpose, such interim analyst would then need to be produced.235

Communications Not Testimonial Approach adapted to either Chavis formulation, we anticipate less analysts would need to testify in certain cases than would need to under an approach fitted to the standard definition for testimoniality. We also note that either Chavis formulation goes too far in narrowing the confrontation right in non-forensics cases. For example, imagine police were investigating a murder case allegedly stemming from the defendant’s obsession with the victim. Suppose the prosecution sought to use a declarant’s statement made to police that the declarant saw the defendant’s car in the parking lot of the victim’s office several times. This statement would be used as a circumstantial step in the murder case—i.e., it would not be stating a “final result” or an “essential element”—and so this circumstantial link in the chain of evidence could be excluded from coverage.

233. Id. at 1091 (“Even Chavis only posits that the non-testifying analysts’ statements relate to their adherence to testing protocols and the absence of irregularities (following standard operating procedures and not seeing any evidence of taint or contamination)—he does not argue that those statements in and of themselves were used to prove his identity or any other element of the crimes he was charged with.”). Thus, the court noted, statements of analysts that they examined or manipulated DNA swabs in a certain manner would not be considered to have provided testimony “against” the defendant, as required by the Confrontation Clause. Id. at 1093. Under a Chavis approach, while a DNA profile may help prove the identity of an alleged criminal, intermediary steps in the process do not prove—or seek to prove—anything. Id.

234. The primary purpose test is also an objective test, meaning the motivation of the speaker, listener, and/or solicitor of the statement may be relevant. Moreover, the problem of “mixed motives” may impose further difficulties in determining a statement’s primary purpose. See supra Part II.

235. In this connection, the Court could allow the defense discovery of all the interim papers so that the defense could investigate whether anyone in the chain had a primarily testimonial purpose.
B. Hypothetical Assumption Approach

A second approach the Court could take would be to build upon Justice Alito’s plurality opinion in *Williams* and find that a testifying expert is merely basing her opinion on the hypothetical assumption that statements of the non-testifying analysts are truthful. We refer to this as the “Hypothetical Assumption Approach.”

Under this approach the Court would find that a testifying analyst is not making any type of assertion that the statements of any other analysts are true. This way—consistent with *Williams* and Federal Rule of Evidence 703—there would be no need for the prosecution to produce any of those other analysts. This approach would be best handled through use of a hypothetical question to the testifying expert.²³⁶

Consistent with this approach, the prosecution would still need to independently prove that the testifying expert’s assumption is true in order for the fact finder to accept the expert’s opinion at trial. For instance, to take an example based on *Chavis*, a testifying expert who handled a match between two DNA profiles might be assuming that one sample came from the crime scene and the other from the accused. It would fall to the prosecution to actually prove the source of these samples. Similarly, an expert testifying about a report finding a certain substance on accused’s person was methamphetamine may be assuming that the sample of the substance came from the accused. The prosecution would still need to prove that such assumption was correct.

As a matter of evidence, however, the only way for the prosecution to prove such non-testifying analysts’ statements are true may be calling each relevant analyst to testify. This would mean that, as a practical matter, in many cases the Hypothetical Assumption Approach may not appreciably reduce the number of analysts who actually must testify at trial. If it so chose, the Court could seek to help mitigate this by recognizing a routine practice-type argument—pursuant to Federal Rule of Evidence 406—to the effect that forensic reports out of a specific lab have always produced accurate results.²³⁷ More specifically, for instance, if a testifying analyst assumed that an interim analyst had followed lab procedures in calibrating an apparatus, it might be possible to introduce evidence—perhaps through testimony and relevant business records—showing that such procedure was always or habitually followed by the lab or analyst in calibrating the apparatus.²³⁸

²³⁷. See *FED. R. EVID.* 406 (“Evidence of a person’s habit or an organization’s routine practice may be admitted to prove that on a particular occasion the person or organization acted in accordance with the habit or routine practice. The court may admit this evidence regardless of whether it is corroborated or whether there was an eyewitness.”)
²³⁸. In addition, Justice Alito, in *Williams*, suggested that circumstantial evidence—the fact that a sample was sent to the lab in the circumstances in *Williams* and
C. More Than Surrogate Approach

A third approach could be for the Court to permit a single analyst—who is more than the “surrogate” witness discussed in Bullcoming—to testify. We refer to this as the “More Than Surrogate Approach.”

We have previously argued that it may already be sufficient to offer the testimony of a single forensic analyst so long as such analyst is considerably more than a “surrogate” witness and certainly not a mere “conduit” for admission of un-confronted hearsay. In determining whether a given analyst would meet the Confrontation Clause under this approach, we believe at least three factors may be relevant. First, it may be relevant how prominently the report was used at trial, that is, whether it was introduced or extensively mentioned. Second, it may be relevant to consider the degree to which the testifying expert is exercising her own judgment in constructing her opinion, including the thoroughness of her review of the statements of other analysts and her involvement in the specific process at issue, laboratory conducting the process, and other processes of like kind. Third, it may be relevant the degree to which the testifying analyst permits the accused to fully cross-examine the entire forensic analysis.

The ideal testing analyst under the More Than Surrogate Approach might be extremely closely connected to the testing process and the lab at issue, be able to testify to extensive steps of internal validation and an intensive review and analysis of the other analysts’ work, and be capable of affording the accused a sufficient opportunity to cross-examine her regarding all the steps in the forensic process. The analyst should also offer an independent opinion based at least in part on her own analysis and not simply act as a conduit for admitting hearsay. Although qualifying as a testifying analyst under this approach may be difficult, if the Court were to set clear criteria on who would be a sufficient testifying analyst, labs could adjust accordingly. Once labs understood the criteria, they could begin to designate at the outset of a process who would be the testifying analyst—should one be needed—and ensure that such person meets relevant criteria. Clear criteria would also allow other local stakeholders to better prepare for trial.

was later returned, and the fact that the lab’s test results squared with the victim’s identification of the culprit—apparently could solve the requirement of independent proof for both the source problem (i.e., where the sample came from) and the internal validity problem (i.e., the following of protocols). See Williams, 567 U.S. at 74–77.

239. See A Game of Katso and Mouse, supra note 4, at 54–55 (discussing approach in United States v. Katso, 74 M.J. 273, 273 (C.A.A.F. 2015)).

240. Id.

241. Id.

242. Id. It is unclear that the testifying expert in Chavis would sufficiently meet these criteria.

243. Id.

244. Id.
D. Segment Representative Approach

A fourth approach the Court might consider would be to require production of at least one representative analyst for each identified segment of a forensic process. We refer to this as the “Segment Representative Approach.”

We can imagine two versions of this approach: (1) a version based on “discrete phases” in a forensic process (with each phase being referred to as a “segment”); or (2) a version based on a set “number of analysts” (with such set number of analysts being referred to as a “segment”). As to the version based on discrete phases, Justice Breyer’s explanation of a typical DNA analysis in the appendix to his Williams opinion may be illustrative. That analysis involved multiple steps in preparing the suspect’s sample’s profile, multiple steps in preparing the crime scene sample’s profile, and then a step for comparison between the two profiles to reach a conclusion on whether they match.\(^{245}\) The Court could identify work on the suspect’s sample as one segment, work on the crime scene sample as a second segment, and work on the match as a third segment. Under the discrete phases version of the Segment Representative Approach, if the prosecution were seeking to utilize the results of the analysis in Justice Breyer’s appendix against an accused, the prosecution would be required to produce at least one analyst associated with the suspect sample’s segment of the analysis, at least one associated with the crime scene sample’s segment of the analysis, and at least one analyst involved in conducting the analysis to check for a match between the two samples. One key challenge with this version—which might make the Court less likely to adopt it—would be enumerating sufficient guidance on what should constitute a segment such that the guidance would work for the many variations of forensic processes.\(^{246}\) As to the number of analysts version of the Segment Representative Approach, the Court could, for instance, decide that a segment consisted of five forensic analysts. This would mean that, while it would be possible for one analyst to testify on behalf of herself and at most four other analysts, if six analysts were involved, then at least two analysts from the group of analysts would need to testify. The theory under this version of the approach being that the greater the number of analysts a given analyst is representing, the greater the likelihood that the testifying analyst will be unable to afford an accused a sufficient opportunity to confront relevant evidence. One important challenge with this version

\(^{246}\) Connected to this, the Court may find it challenging to determine how granularly it wants to define a segment. In principle, many intermediate steps—such as checking in a sample, preparing the sample, and interpreting relevant data—could be considered segments. If the Court did adopt a discrete phases version of this approach, we assume the Court would seek to define segments very broadly such that the number of analysts who must testify would be limited.
would be setting an appropriate limit on the number of analysts constituting a segment. It would be particularly difficult to set a standing number appropriate for the many different types of forensic tests and analyses. The Court could attempt to fashion several standing rules based on set criteria—such as the difficulty of the type of analysis involved, the likelihood of error for such type of analysis, and the average overall number of analysts involved in a typical analysis of like kind—but it would be difficult for the Court to do so without resorting to the sort of case-by-case balancing we assume the Court would generally seek to avoid.

In some ways, this Segment Representative Approach—either version—would be a related approach to the More Than Surrogate Approach since each representative analyst would be a type of “more than surrogate” for her or his segment. Also, as in the More Than Surrogate Approach, each representative would still need to satisfy Court-adopted criteria to be a sufficient representative. We assume such criteria would be similar to those we discussed in connection with the More Than Surrogate Approach. However, the Segment Representative Approach is still distinct from the More Than Surrogate Approach. Under the discrete phases version of this approach, for instance, an analyst who merely conducted the comparison between two DNA profiles—without being involved in preparing either profile—could not, alone, meet the Confrontation Clause even if she otherwise met the criteria set out in our discussion of the More Than Surrogate Approach. Similarly, under the number of analysts version of this approach, an analyst who met all the criteria, but who was only one of ten analysts involved in the analysis—assuming the Court set a limit of five analysts for a segment—could not meet the Confrontation Clause.

In practice, under either version of this approach, it is still possible that a single individual could be a sufficient representative and that such expert’s testimony alone could be sufficient. For instance, under the discrete phases version, the expert in Chavis seems to have been involved in each segment of the relevant DNA analysis—assuming the Court defined the segments as suspect’s sample, crime scene sample, and match. If such expert could have fully satisfied the other Court-adopted criteria—which it is not clear to us she could—her testimony alone might have been sufficient. Under the number of analysts version, if there were only four total individuals involved in an analysis—and assuming the Court had set a limit of five analysts for a segment and all other criteria were met—one analyst alone could be sufficient.

Consistent with our recommendation under the More Than Surrogate Approach, the best way to make this approach workable would be for the Court to set out clear criteria as to what would constitute a relevant segment—either discrete phases of a process or a set number of analysts—and also as to who will be a sufficient testifying represen-
tative. Labs could use the criteria to pre-designate segment representatives, and other local stakeholders could likewise use it to better prepare.

E. Important Analyst Approach

A fifth approach the Court might consider would be to require production of only the most important analyst or analysts. We refer to this as the “Important Analyst Approach.”

We believe that there are at least two ways that importance could be judged. First, the Court could seek to set out in the abstract what roles in a forensic process would be deemed important. Under this version of the approach, we suspect that the Court would assign importance based on the general significance of individual roles in forensic analysis. We assume, for instance, that the most likely candidates for general importance would be the first and last analysts in a forensic chain. The last analyst in a chain—like the testifying analyst in Chavis—may be the most obvious example of an important witness since she is the one actually responsible for the match between the profiles from the accused and the crime scene.247 Without her match, the analysis of the other analysts would not have much value in a case. Interim analysts, in contrast, would likely not be deemed important because they may generally be involved with mere chain of custody or other intermediate processes. However, chain of custody is still important to a case because if the two samples are not from the crime scene and the accused, respectively, the ultimate analyst’s conclusion as to any match is meaningless. As such, we suspect that the Court would also deem the first analyst in a chain important. Perhaps the Court could set a presumption that the first and last analysts in a chain are important and then afford the defendant the right to demonstrate that other analysts in the specific process involved were also important.

Under a second version of the Important Analyst Approach, the Court could decide that, rather than setting out a presumption as to which analysts would be important in the abstract, a specific determination should be made in each individual case based on the specific process and facts involved. This might entail looking at various factors in the specific case, such as which analysts’ statements feature prominently or which statements are more central to the specific case. We assume, however, that the Court might disfavor such a case-by-case approach.

For any version of this approach, it would be extremely helpful if the Supreme Court could offer clear guidance on which analyst or analysts would be deemed important. Clear guidance is especially helpful in the context of this approach since “important” may be seen

as an even more subjective concept than those described in connection with certain other of our approaches.

F. Actual Evidence Approach

A sixth approach the Court might consider is to determine what is the actual evidence at issue in a given case: the testifying expert or the work of other analysts who are not produced. We refer to this as the “Actual Evidence Approach.”

Under this approach, a court would need to determine what the evidence really is. This could be accomplished by, for instance, asking who is predominantly speaking in the case. In making this determination, the Court would likely need to adopt a set of factors to consider, some of which may be like those suggested in connection with the More Than Surrogate Approach. First, the Court might consider how much independent judgment the testifying expert put into her opinion. Second, the Court might consider how much actual participation the expert witness had in the forensic process. Third, the Court could consider whether the report itself is being offered, or if not, whether material from the report that the testifying expert would not personally know will be extensively mentioned. Fourth, the Court might consider the degree to which the offered testimony—or final argument—rests upon material in the report that the testifying expert does not personally know. Fifth, and finally, the Court could consider how much independent evidence the prosecution offers on the material from the report that the testifying expert does not personally know.248

The prime downside to this approach is that a case-by-case, balancing determination is all but assured, and it would be rather indeterminate and somewhat unpredictable how a court would come out. Even so, perhaps criteria would evolve.

Before closing, we note that our six approaches are not necessarily mutually exclusive, and the Court could choose to fashion a rule that utilizes more than one such approach or combines approaches.249 We also want to emphasize that the Court may find certain legal rights or principles cut across or underlie more than one of our approaches. Particularly, consider the following three. First, the right to compul-

---

248. For instance, a testifying expert—such as the one in Chavis—might not have personal knowledge of the source of the original samples from the accused and the crime scene. If the prosecution does not offer much independent evidence of such items in the report, then the prosecution would be seen as relying primarily upon the report (i.e., the non-testifying analysts’ statements) to prove them (i.e., for their truth), rather than as mere assumptions of the testifying expert (i.e., mere hypotheticals) in illuminating the testifying expert’s own independent opinion.

249. For example, if the Court were to adopt one of our approaches that would require at least certain specific analysts to attend (such as our “Interim Communications Not Testimonial Approach”), it might also want to adopt an approach that allows for the contingency that a substitute may be needed for one of the required analysts (such as our “More Than Surrogate Approach”). See infra Part IV.A, IV.C.
sory process is found in the U.S. Constitution’s Compulsory Process Clause, which ensures that “[i]n all criminal prosecutions, the accused shall enjoy the right . . . to have compulsory process for obtaining witnesses in his favor.” In theory, the Court could determine that excusing certain witnesses in a forensic chain is justifiable because the defendant might retain the right to call such witnesses pursuant to the Compulsory Process Clause. The Court has previously found that the defendant’s compulsory process right to subpoena a witness does not excuse the prosecution from producing the witness under the Confrontation Clause. However, assuming at least certain sufficient analysts need to be produced under one of our six approaches, the Court could theoretically find that the compulsory process right justifies not requiring production of additional witnesses in a forensic chain. Second, the principle of formality may cut across or underlie our approaches. Certain leading cases have referenced formality of the offered statement as indicia of “testimoniality,” as evinced most prominently in Justice Thomas’s opinions. It may be that the Court finds certain types of witnesses—such as witnesses playing extremely limited or tangential roles in forensic tests—do not provide sufficiently formal statements such that they need to testify. Third, and finally, consider the principle of unavailability. As previously noted, Crawford stands for the proposition that a non-testifying declarant’s testimonial statements are admitted only “where the declarant is unavailable, and only where the defendant has had a prior opportunity to cross-examine.” Drawing upon the principle of unavailability, the Court could condition use of one or more of our approaches on some finding of analyst unavailability. This might mean that any such approach could only be used if certain analysts in the chain are not available to testify. For instance, the Court might determine that all analysts in a forensic chain must generally testify, but if certain analysts are unavailable, use of the “More Than Surrogate Approach” or “Segment Representative Approach” would then become justified. The Court could also go further and excuse witnesses even if our approaches would otherwise require their production if the prosecution could show genuine unavailability of witnesses. However, we do not believe the Court would find unavailability excuses all analysts, and

250. U.S. CONST. amend. VI.  
251. See Melendez–Diaz v. Massachusetts, 557 U.S. 305, 324 (2009) (“Respondent asserts that we should find no Confrontation Clause violation in this case because petitioner had the ability to subpoena the analysts. But that power—whether pursuant to state law or the Compulsory Process Clause—is no substitute for the right of confrontation.”).  
252. See supra Part II.  
254. See infra Part IV.C, IV.D.
we think the prosecution would still need to produce a critical mass of sufficient analysts.\textsuperscript{255}

V. Conclusion

The purpose of this Article is to identify and discuss six plausible approaches the U.S. Supreme Court may consider in addressing the multi-analyst problem. Since we assume the Court would prefer not to have all analysts testify—and indeed, would prefer to minimize the number of analysts required—we suspect that the approaches we have suggested in this Article are the most plausible. If we had to speculate which of these six approaches the Court would be most likely to prefer, we believe some form of the Interim Communications Not Testimonial Approach would be favored.

Requiring any forensic analyst to testify may be burdensome for labs and law enforcement, and increasing the number of analysts required for testimony would correspondingly compound the difficulty.\textsuperscript{256} Nevertheless, the degree of confrontation afforded defendants by the Constitution cannot necessarily turn upon cost or convenience. Courts and commentators have suggested means of mitigating the burden on law enforcement when forensic analysts must appear, such as use of notice-and-demand statutes, retesting, or even video testimony.\textsuperscript{257} We believe that one of the most important things the Supreme Court could do would be to set some guidance on which analyst within the multi-analyst chain must testify. If courts, labs, and local stakeholders know an approach in advance of trial, this should help reduce costs and uncertainty or at least allow relevant stakeholders to be better prepared. As Justice Gorsuch expressed more generally about confrontation rights in forensics cases post-Williams, the Court “owe[s] lower courts struggling to abide our holdings more clarity than we have afforded them.”\textsuperscript{258}

\textsuperscript{255} Although compulsory process, formality, and unavailability could each theoretically underlie separate approaches, we have not presented them as such since we find them less plausible as standalone approaches than the other six. In particular, because we find it unlikely that the Court would excuse all analysts consistent with Crawford and the Melendez–Diaz Trilogy, we still think a separate approach would be needed to determine which type and how many witnesses must testify. Accordingly, we think compulsory process, formality, and unavailability are best considered as potential glosses on an approach rather than the approach itself.
