The Case for Iterative Statutory Reform: Appraisal and the Model Act

Robert B. Thompson*

Appraisal may be the Model Business Corporation Act’s most distinctive and creative corporate law product in the Act’s 60 year history.¹ This right of shareholders to require the corporation to pay them the fair value of shares upon some mergers or other fundamental changes does not seem a likely candidate for a statutory success story. It is a policy provision that does not exist widely outside the United States,² its initial purpose has essentially disappeared, its statutory language is the most convoluted of any section of a corporations code, and its history has been a series of statutory and judicial steps to gut its provisions.³ Yet through a series of changes, beginning in the late 1970s and early 1980s and continuing through revisions in 1999 and 2006, the MBCA has shown the value that can come from an ongoing revision process of corporate law. It took several efforts to produce a remedy directed toward conflict of interest rather than providing liquidity and there were missteps along the way. Yet the result has brought coherence to a topic where it has been sorely lacking; the product seems to have staying power even though not yet widely adopted by the states. This article examines how this shift came about looking first at the challenges that have long plagued appraisal statutes and then evaluating the product that has resulted from the MBCA approach.

* Professor of Law, Georgetown University Law Center.

¹ Distinctive” is used here to characterize the efforts of the Model Business Corporation Act that differ from Delaware, the other primary source of corporate statutes in America. “Creative” is used here to identify statutory provision that differ from what went before in both substance and importance. My list of most important Model Act provisions would include the following: (1)appraisal; (2) the involuntary dissolution/oppression statute in subchapter C of chapter 14; (3) the distributions provisions of Chapter 6; (4) the standards of conduct/standards of liability approach of Subchapter C of chapter 8; (5) the indemnification provisions of subchapter E of chapter 8; (6) the conflicting interest provisions of Subchapter F of chapter 8; (7) the demand/derivative suit procedures of chapter 7, subchapter D; (8) exculpation in §2.02(b)(4); (9) majority voting in §10.22; and (10) shareholder bylaws in §2.09. In the last three, for example, MBCA has followed Delaware’s lead; in the middle four, changes were done in conjunction with Delaware or building on Delaware precedents or changes. See e.g. Gorris, Hamermesh & Strine, this symposium. discussing the overlap between the MBCA and Delaware. It is the first three where the MBCA has made its most distinctive contribution.

² See Reinier Kraakman et al., The Anatomy of Corporate Law at 202 (2d ed 2009) (European jurisdictions have never turned to appraisal rights as a general remedy although Germany and Italy provide remedies that resemble appraisal; Japan also has an appraisal remedy).

³ See the discussion in Part I below.
I. The Challenges Presented to Law Reformers by the Traditional Appraisal Statutes

The appraisal process has long appeared dysfunctional to commentators and many judges. In one sense this is because there is no longer a social consensus behind the law's original purpose that a merger or other fundamental change should be a trigger to permit individual shareholders to demand that the corporation repurchase their stock, a liquidity that investors in the corporate form usually lack. The array of appraisal avoidance techniques receiving legal sanction has grown over the decades in topsyturvy ways that have undermined any coherent functioning of the appraisal process or an understanding of its purposes. An even larger contribution to this dysfunctionality is that as this liquidity use of appraisal has diminished to the point of invisibility, appraisal has grown dramatically in a different transactional context where shareholders are guaranteed liquidity for their investment, but need protection against the conflict of interest of those in control of the corporation who are setting terms at which the minority shareholders must exit. The traditional procedures of the appraisal statute, originally intended to make it harder for shareholders choosing to get out, now work to exacerbate the difficulty of minorities being forced out of the enterprise on terms set by the majority. Legislators have been slow to update appraisal statutes, and courts, even if more attuned to the need to keep corporate law current, have been uneven in the extent to which they have captured this fundamental shift.

A. The Decline of the Traditional Liquidity Function of Appraisal Statutes

Appraisal statutes appeared in state statutes at the time that general incorporation statutes first gave majority shareholders in corporations a clear route to approve a merger or other fundamental change by less than a unanimous shareholder vote. These statutes provided minority shareholders the ability to exit from an enterprise

4. See, e.g. Bayless Manning, The Shareholder’s Appraisal Remedy: An Essay for Frank Coker, 72 Yale L. J. 223, 241 (1962) (indiscriminate application of appraisal is pernicious); Ernest L. Folk, III, The Delaware General Corporation Law: A Commentary and Analysis 373 (1972) (appraisal of decreasing importance; “would not be surprising to see it eliminated altogether.”)

5. Appraisal is an outlier among corporations policies in terms of what it seeks to accomplish. Most statutory provisions reflect the core corporate characteristics of centralized control, majority rule, and entity permanence. Corporate decisions are left to the board of directors, and majority shareholders can control the board. Minority shareholders must go along with these centralized decisions and usually have no right to require the corporation to return their money until the board chooses to do so. In contrast to this approach, appraisal permits an individual shareholder who dissents from a decision made by the directors and the majority of shareholders to obtain the fair value of the shares from the corporate treasury.

when the majority owners fundamentally shifted the entity’s business;\(^7\) the remedy provided, as continues to be common today, that the minority would receive the value at the time just before the merger exclusive of any change due to the merger, thus preserving the investment value as it existed prior to the change to which the minority objected.\(^8\)

Concern over the adverse impact on the continuing business from the corporation having to shrink the size of its capital by giving back cash to dissenters was visible early on in the appraisal context and grew over the twentieth century.\(^9\) The statutes contained (and still contain) a series of strict procedural requirement that a dissenting shareholder must complete to “perfect” dissenters rights.\(^10\) These statutes were strictly construed so that if a shareholder missed one or more of these steps, the shareholder lost the right to appraisal and was relegated to the consideration specified in the merger.\(^11\)

Over the twentieth century the law moved more firmly in the direction that one who invests in a corporation has agreed to business decisions being made by the directors elected by the majority of shareholders, even for changes previously seen as fundamental.\(^12\) Private planners achieved success in using alternative structures of business deals to avoid statutory appraisal rights.\(^13\) A sale of assets was treated differently under early corporations statutes at least on the buyer’s side, where such deals were permitted to be done by the action of the acquiring board alone without shareholder voting or dissenter’s rights.\(^14\) Yet, it is fairly easily to combine the acquiring corporation’s purchase of all of the assets of a target company in exchange of cash or other consideration with the dissolution of the target company and the distribution of the consideration from the corporate treasury to the target shareholders such that the transaction is the financial equivalent of a merger. Delaware courts have refused to apply the de facto merger doctrine to such a deal, thus permitting planners to structure

\(^9\) See Manning, supra note 4 at 41 (“Every extension of the appraisal remedy increases the burdens on the going enterprise.”)

\(^10\) See e.g. Del. Code Ann. tit. 8 §262(d).

\(^11\) See cases cited at Exit supra note 6 at 40, note 175).

\(^12\) Shlensky v. Wrigley, 237 N.E.22d 776 (Ill. Ap. 1968) (“Every one purchasing or subscribing for stock in a corporation impliedly agrees that he will be bound by the acts and proceedings done or sanctioned by a majority of the shareholders or by the agents of the corporation duly chosen by such majority, within the scope of powers conferred by the charter” quoting Wheeler v. Pullman Iron & Steel Co., 32 N.E. 420, 423 (Ill. 1892).)

\(^13\) See e.g. George S. Hills, Consolidation of Corporations by Sale of Assets and Distribution of Shares, 19 Cal. L. Rev. 349, 350 (1931) (stating it was fashionable to use statutory sale of assets rather than consolidation or merger); Folk, supra note 4 at 318 (“prior to 1967, the merger technique was a second choice for Delaware corporate counsel”).

\(^14\) See e.g. Del. Code Ann. tit. 8 §271.
their transaction so as to avoid appraisal rights.\textsuperscript{15} There are some cases outside of Delaware that apply the de facto merger doctrine when planners have gone further so as to use a purchase of assets form in an “upside down” transaction – where the formal buyer (whose shareholders would normally lack appraisal rights) are giving up so many shares as consideration for the assets being acquired that the effective result is that the acquiring company is really being purchased without the availability of appraisal rights.\textsuperscript{16}

Using the sale of asset form has become less necessary since the acceptance of the triangular merger form of acquisition.\textsuperscript{17} In a triangular merger, the acquiring corporation sets up a wholly owned subsidiary, usually funds the subsidiary with stock of the parent, and then causes the subsidiary to merge with the target under a regular statutory merger. Pursuant to the usual merger requirement, shareholders of each constituent entity vote and get appraisal. Since only the newly formed subsidiary and the target are parties to the merger, shareholders of the parent are denied any appraisal rights.\textsuperscript{18}

Eventually, legislatures approved broadened exceptions to appraisal, excluding the rights from surviving corporations in the merger without the need to resort to the sale of asset form or a triangular merger. In some states that follow the language of the post-1999 MBCA, no surviving shareholders have appraisal rights; in Delaware and states using earlier versions of the Model Act, shareholders of surviving corporations retain appraisal rights for deals where the number of outstanding shares increases by more than 20%.\textsuperscript{19} The lessened rights for the shareholders of a surviving corporation than the disappearing company could be supported if there was a noticeable difference in the risk of the two sets of shareholders such that there was a greater need for legal protection of one set more than the other. Professor Ron Gilson provided an explanation for why that might be so: shareholders in the surviving corporation continue to have access to a variety of market and private ordering constraints on their managers to align the interests of the manager and shareholder, but in the disappearing corporation, managers are in a “final period” without continuing monitoring from those sources such that additional legal protection could be appropriate.\textsuperscript{20}

\textsuperscript{15} Hariton v. Arco Electronics, Inc., 188 A.2d 123 (Del. 1963) (sale of assets statute and merger statute are independent and of equal dignity).

\textsuperscript{16} Applestein v. United Board & Carton Corp., 159 A. 2d 146 (N.J. Ch, 1960) (“while United appears to be acquiring Interstate, the converse is probably more true in practical effect. We cannot blind ourselves to the realities…”); Farris v. Glen Alden Corp. 143 A.2d 25, 31 (Pa. 1958) (“we will not blind ourselves to the realities of the transaction…Glen Alden does not in fact acquire List, rather List acquires Glen Alden, and under [the statute] the right of dissent would remain with the shareholders of Glen Alden.”) See also Terry v. Penn Central Corp., 668 F.2d 188, 194 n. 7 (3d Cir. 1981) (rejecting de facto merger doctrine under Pennsylvania law, but leaving open the possibility of a different result if the transaction was structured as a minnow swallowing a whale.)

\textsuperscript{17} Similarly, planners of an acquisition can structure an acquisition as a sale of the target’s assets to the acquiring company instead of a merger. Under usual state law, only the shareholders of the selling company receive voting rights and appraisal rights in such a structure.

\textsuperscript{18} There is only one shareholder of the subsidiary, the parent corporation, and pursuant to usual rules of corporations law the parent’s board decides how the subsidiary votes on the merger and if it wants to exercise appraisal rights. The answer to the last question is, of course, no.

\textsuperscript{19} See Del. Code Ann. tit 8, §262(b)(1).

\textsuperscript{20} Ronald J. Gilson, The Law and Finance of Corporate Acquisitions 579 (1986).
The judicial acceptance of triangular mergers, judicial reluctance to apply the doctrine of de facto merger, and the spread of statutes providing an explicit denial of appraisal rights for shareholders of the surviving firm means that appraisal rights will only exist for the surviving firm if the planners want them to exist. In effect it is an optional not a mandatory rule.

As to the target company being acquired, the same freedom to avoid appraisal has not been accorded by the doctrines just discussed. There has, however, been a significant pullback from the availability of appraisal on the target corporation side because of market out exceptions that now appear in Delaware, the Model Act, and a large majority of states. Under these provisions, a shareholder of a corporation whose shares are traded in an active market does not get appraisal if receiving merger consideration that is also actively traded stock. This is partially consistent with a liquidity function in that the law does not need to provide that liquidity if the market already does it.

So what we are left with is that appraisal regularly is not provided to shareholders of a surviving company in a merger and is not provided to target companies if there is an alternative liquid market. Shareholders of non-public target companies who get non-liquid consideration remain protected by appraisal. This ends up being a fairly small area of coverage for appraisal and one that does not seem worth the effort that the statute requires. There is, however, one more group that gets appraisal. As discussed below, some shareholders who receive liquid consideration in the form of cash for their shares still receive appraisal, reflecting a policy that has nothing to do with liquidity and everything to do with conflict of interest, even though that is not stated in the Delaware statute.

B. The Rise of Appraisal in a Cash Out Merger Setting as a Remedy for Majority Conflict and Oppression of Minority Shareholders

A second core cause of dysfunctionalism in appraisal statutes is that at the same time there has been a decrease in the traditional exit-providing function for fundamental corporate changes, there has been a dramatic surge in appraisal being used in the opposite factual context where shareholders are assured liquidity in the merger but have reason to question how the amount was determined. Private planners took advantage of changes in corporations statutes in the 1960s that for the first time allowed cash as consideration for mergers as well as stock or other securities. Even more importantly, in corporations where there already existed a majority shareholder, planners put forward, and courts permitted, deals with merger terms that specified that cash would be paid only to minority shareholders so that they were effectively forced out

---

of the business. These shareholders had appraisal rights, either in Delaware because of an exception to the market out that excluded cash deals or in other states where there was no market out. Yet appraisal had terms unfavorable to a minority shareholder in such a situation. The definition of valuation, as of the day before the merger, encouraged majorities to time a merger when the stock was undervalued and to exclude synergies that might be created by the merger. The procedural requirements worked to insure that some percentage of minority shareholders would not pursue their appraisal rights and be left with the terms provided in the merger. In effect the original procedural rules that had been included to prevent minorities from taking advantage of majorities when the minority was seeking to exit had now been flipped and were positioned to disadvantage minorities when the majority was forcing them to exit. Majority shareholders, seeing the advantages that appraisal offered in minimizing the costs of acquiring the minority, have benefitted from holdings that appraisal should be the exclusive remedy.

The switch in the context in which appraisal was used was dramatic. In the decade after the Weinberger decision (discussed below) the number of appraisal cases increased dramatically over the previous decade. More than eighty per cent of those cases involved cash out mergers confirming the shift that had occurred in the appraisal context. At this point, some courts, but certainly not all, sought to address the discontinuity of appraisal in this new context. Weinberger v. UOP, Inc., the still classic 1983 Delaware case, is a prominent example. There a 51% majority shareholder had accomplished a merger that forced the minority out of the entity on terms chosen by the majority. After a report done by two officers of the parent (who also served as directors of the subsidiary) described the synergies that could flow from such a combination and the advantages “of ousting the minority at a price range of $21 to $24 per share”, the

24 See Del. Code Ann. tit. 8 §262(b)(2) market out does not apply if shareholders are required to accept anything other than four types of permitted consideration. Cash is not one of the named non-appraisal generating types of consideration (unless given in lieu of fractional shares). That is to say the four named types of consideration exhaust the non-appraisal generating consideration. Any other consideration, including cash in a cash out, is appraisal-generating.
25 See e.g. Green v. Santa Fe Indus., Inc. 533 F. 2d 1283, 1298, n. 4 (2d Cir. 1976) (“In short, the controlling shareholders have every incentive to freeze out the outsiders since, even if the appraisal system functions perfectly, by the terms of the statute, the insider alone captures all of the prospective gains associated with the merger”) rev’d on federalism grounds, 430 U.S. 462 (1977).
26 See e.g. Stringer v. Car Data Systems, Inc., 841 P.2d 1183 (Ore. 1992) (plaintiff could only pursue appraisal for claim that shares were worth 50 times the amount of the consideration specified in the merger); Yeager v. Paul Semonin Co., 691 S.W.2d 927 (Ky. App. 1985) (allegation that transaction was for sole purpose of freezing out minority shareholders does not state claim for fraud or illegality to support remedy beyond appraisal.)
27 Seligman reported 19 state court appraisal cases in the ten years leading up to the Weinberger decision in 1983. Joel Seligman, Reappraising the Appraisal Remedy, 52 Geo. Wash. L. Rev. 829, 829 n.3 (1984) Thompson, surveying appraisal cases in the decade that followed Weinberger, found 103 reported cases covering 80 separate transactions. See Exit supra note 6 at 25.
28 Only 6 of the 80 transactions involved two independent companies merging. See Exit supra note 6 at 27, Table 1.
29 457 A.2d 701 (Del. 1983).
merger went through at $21 per share.\textsuperscript{30} The Court found that the merger did not meet the test of fairness. In the process it threw out then existing Delaware law that relied exclusively on a mechanistic “Delaware block” method to determine fair value in an appraisal context and inserted in its place, “a more liberal approach [that] must include proof of value by any techniques or methods which are generally considered acceptable in the financial community.”\textsuperscript{31}

The court was very direct as to the deficiencies of the existing “clearly outmoded” Delaware appraisal process, and declared “it is time we...bring our law current.”\textsuperscript{32} Its most specific change was to significantly narrow the statutory provision that value must exclude “any element of value arising from the accomplishment or expectation of the merger.” This is the part of the traditional appraisal statute, drawn from its origins in providing liquidity that is most out of place in a statute used in a cash-out setting, a phrasing that would easily facilitate the statute being used oppressively against minority shareholders. The court declared this clause to be “a very narrow exception” excluding only “projections of a speculative variety” and permitting a wide variety of elements of future value, which are known or susceptible of proof as of the date of the merger.\textsuperscript{33} The result was to adapt the appraisal statute to the new context without legislative action required.\textsuperscript{34}

The opinion suggested that appraisal, as modernized, would be the usual or even exclusive remedy for a cash-out merger but it also provided that in times of conflict appraisal would be inadequate and fiduciary duty examination via a focus on fair dealing and fair price would be appropriate.\textsuperscript{35} Subsequent Delaware opinions have confirmed the result that in regular mergers where there is a conflict of interest, Delaware shareholders have a choice of appraisal or fiduciary duty;\textsuperscript{36} thus, fiduciary duty remains available to permit minority shareholders to seek relief based on fiduciary duty in contexts where they feel appraisal might be inadequate.\textsuperscript{37} In short form mergers, where the controlling shareholder already owns 90% or more of the outstanding stock, Delaware’s statute makes appraisal exclusive, but the Delaware courts have graphed several fiduciary duty-type protections onto the bare bones of the statute to make the statutory protection more like what has evolved for breaches of fiduciary duty under common law.\textsuperscript{38}

\textsuperscript{30} See 457 A.2d at 708, particularly item 3 in the outline of the benefits expected to flow from the merger.
\textsuperscript{31} 457 A.2d at 713.
\textsuperscript{32} 457 A.2d at 712.
\textsuperscript{33} 457 A.2d at 713.
\textsuperscript{34} The Court relied on the statutory reference to take into account “all relevant factors”, 457 A.2d at 714. That term, while new to the statute, was a part of existing Delaware case law. See e.g. Sterling v. Mayflower Hotel Co., 93 A.2d 107, 114 (Del. 1952).
\textsuperscript{35} 457 A.2d at 714.
\textsuperscript{36} See e.g. Kahn v. Lynch Commun., Inc. 638 A.2d 1110 (Del. 1994).
\textsuperscript{37} See e.g. In re Emerging Communications, Inc. Shareholders Litigation, 2004 WL 1305745 (Del.) (discussing appraisal and breach of fiduciary duty claims in a cash out setting).
Outside of Delaware, states have split on when appraisal is the exclusive remedy, or the appropriateness of discounts for lack of marketability or for minority status, or the appropriateness of considering alleged majority misconduct in appraisal, or the procedural terms are for determining value. The result is that the degree to which appraisal protects minorities or is a vehicle of majority misuse varies from state to state. There remains not just diversity, but real confusion in the application of appraisal.

C. The Extent of Appraisal’s Dysfunctional Nature Illustrated

The dysfunctional nature of appraisal has been compounded because the statutory language is among the most confusing of all corporations statutes. Take Delaware’s appraisal statute as an example. It begins with a simple (and broad) declarative statement in section 261(b) that appraisal rights are available for shareholders in both of the constituent corporations to a merger, a straightforward declaration of the world circa the early 1900s. Subsection 261(b)(1) immediately asks readers to reverse direction by removing appraisal for publicly traded shares. After an easy to overlook semi-colon, a second exception is tucked into the same paragraph removing appraisal for shareholders of the surviving corporation so long as its shareholders don’t get to vote on the merger as determined by section 251(f). A review of the shareholder voting requirements in Section 251 reveals that subsection (c) begins with a global requirement for voting by shareholders of both corporations in a merger, but then (f) reverses that rule if three conditions are met. The most relevant of the three is the last one removing a vote if the number of shares to be issued in the merger does not exceed 20% of the previously outstanding shares. Thus to this point, two exceptions have been made available by the statute, the first that potentially applies to both acquiring and target corporations whose shares are publicly traded and the second

39 See e.g. Fleming v. International Pizza Supply Co., 676 N.E. 2d 1051 (Ind. 1997) (appraisal exclusive even in conflict transaction; statute strongly favors majority rule and finality of corporate transactions). See generally, F. Hodge O’Neal & Robert B. Thompson, O’Neal & Thompson’s Oppression of Minority Shareholders and LLC Members (Rev. 2d ed) at §§5.33.
40 See Stanton v. Republic Bank of South Chicago, 581 N.E. 2d 678, 682 (Ill. 1991) (upholding trial court discount for both). Most courts have rejected such discounts. See, MBCA §13.04(4) (iii) (defining fair value to exclude discounts for lack of marketability and minority status); American Law Institute, Principles of Corporate Governance §7.22; See generally Oppression supra note 40 at §5.32.
43 Del. Code Ann. tit 8 §262(b)(1) (defined by the statute to be shares traded on a national securities exchange or held of record by more than 2000 shareholders).
44 Del. Code Ann. tit. 8 §251(f).
which is only going to apply to shareholders of the corporation surviving a merger. Since surviving corporations with publicly traded shares are already covered by the first or “market out” exception, the real impact of the second clause is to preserve appraisal for shareholders of non-public surviving corporations who, pursuant to the terms of the merger plan, have issued shares surpassing 20% of their preexisting total.

It would be possible to argue that 262(b) and 262(b)(1) as to surviving corporations in a merger reflect a definition of which transaction are so fundamental as to generate the exit right for shareholders of a surviving corporation i.e. those that would reflect a substantial change to their enterprise, as measured by a 20% dilution of their ownership position. But that would be an illusion. Planners can avoid appraisal rights for these shareholders simply by structuring the deal as a triangular merger between the target company and a wholly owned subsidiary of the acquiring company. The complexity (and mandatory appearance) of the statute does nothing to guarantee appraisal for any surviving corporation shareholder beyond what planners may voluntarily choose to provide.

That leaves the possible impact on shareholders of the disappearing corporation. The language of section 262(b) and 262(b)(1) suggests that shareholders of disappearing corporations, too, will lose appraisal if they have liquidity in the form of a market for their shares. But subsection 261(b)(2) then requires an additional 180 degree turn. Its initial clause, “Notwithstanding paragraph (1)” suggests it will reverse both exceptions in (1)—the market out and the out for surviving corporation shareholders without a vote--but parsing the words that follow reveals the subsection only applies to shareholders of the disappearing company (i.e. “holders…required by the terms of an agreement of merger…to accept” specified consideration for their shares. Since shareholders of the surviving company will continue to hold their existing shares, they will not be covered by this clause and cannot regain appraisal rights.

Section 262(b)(2) is written to reinstates appraisal rights for shareholders of the disappearing corporation if they are required to accept any consideration except four named kinds of consideration. In other words, after requiring two 180 degree reversals of direction, the statute defines the coverage in the negative, requiring readers to make one additional reversal of position. Thus, the four named kinds of consideration are consideration that a shareholder can be required to accept and get no appraisal. They include shares of the surviving corporation, shares of another corporation if it is publicly held, cash (but only in lieu of fractional shares), or any combination of the first three. The crucial substantive effect derives from the consideration outside this list, those unnamed forms which are “appraisal-generating” consideration. Cash is the most important of the “appraisal-generating” consideration, a choice that is a bit bizarre given

46 Stock exchange listing requirements can require a shareholder vote in a triangular setting because of inclusion of “any transaction or series of related transactions” increasing the number of outstanding shares by 20%. See New York Stock Exchange Listed Company Manual §312.03(c). But such a requirement does not provide appraisal rights which turn on voting entitlement under the state statute, §251.
47 Del. Code Ann. tit. 8 §262(b)(2).
that in the earlier period appraisal was triggered to provide shareholders liquidity. The most common place that cash is used in mergers today is in the cash-out context where an existing majority shareholder is forcing the minority owners out of the entity on terms chosen by the majority. This, of course, is a classic conflict of interest context, which is a legitimate basis for legal intervention, but not one described in the Delaware statute or one that is part of the historical justification for appraisal or one that the procedural and substantive rules of the statute reflect very well.

Outside of a conflicted transaction, there remain two examples in Delaware where the shareholder of a disappearing company can pursue appraisal. In an arm’s length merger where two independent sets of managers have negotiated a merger plan, a shareholder who disagrees with the terms that its management negotiated and its majority shareholders approved can pursue a judicial valuation alternative if: (1) the disappearing company is a non-public corporation; or (2) the disappearing company is a public company and the planners have provided that cash is the consideration to be used. In the second category, if the consideration is stock of the acquiring company or even stock of a third party public company, the shareholders lose their appraisal remedy. A statute providing that shareholders of a public company engaged in a non interested merger transaction should have appraisal rights when they get cash, but not when they get shares retains a shred of the historic liquidity function of appraisal, but one that planners can easily avoid in most deals if they are worried about liquidity by not using cash.

Overall this statute is as far from “plain English” as a statute can get and is the strongest argument for the need for Delaware to update its corporations code. The value of continuity of statutory language, structure and numbering is insufficient to trump such a warren of confusion. Even if one were to correctly follow the operation of the statute thorough the twists and turns, the result is to provide appraisal rights in a series of transaction that cannot be explained by reference to a coherent policy. The statute does little more than provide a lucrative opportunity for Delaware lawyers to explain what the statute means and suggest ways around it. That seems a weak reed to support the continuity of this structure.

The actual litigation of appraisal claims only furthers the dysfunctionality argument. The proceedings are often long and expensive and results seem somewhat random. Consider the well-known case of Cede & Co. v. Technicolor, Inc. Technicolor had long been an icon in the movie business, an early pioneer in adding color to movies; but by the 1980s had faced increasing competition in that business and declining prospects overall. Management implemented an ill-advised diversification into one-hour photo locations leading to a decline in its stock from $22.13 to less $8.37 over 16 months. At that point an outsider bidder (Ronald Perelman who would gain fame for his takeovers

48 Bayless Manning compared a shareholder's appraisal remedy to having an Irish sweepstakes ticket: “not earned, unrelated to their work, usually worth nothing, and once in a great while a windfall.” Manning, supra note 4 at 261-262. The recent experience, outside of the interested transaction settings, seems little different.

49 See, e.g. 684 A. 2d 289 (Del 1996), one of dozens of reported decisions in this case.
of Revlon and other companies) offered to buy the shares for more than a 100% premium. Management and the board of directors (with no connection to Perelman) eventually agreed to an acquisition as did 85% of the shareholders who tendered their shares for the specified premium. As set out in the deal structured between the parties, the acquirer followed the tender offer with a cash-out merger providing the remaining shareholders the same $23 cash price. One shareholder, who had purchased when the stock traded at around $10, sought a value even higher than the handsome premium negotiated by independent managers and accepted by an overwhelming majority of shareholders. Litigation lasted for more than 20 years. During that time two chancellors of Delaware conducted separate valuation proceedings as part of lengthy trials, one valuing the shares at $21.60 and the other at $21.98, each below the consideration offered in the deal, so that the shareholders would have been worse off for their two decades of litigation. At this point, the Delaware Supreme Court, applied procedural rules to apply a financial assumption of the initial chancery valuation to the second chancellor’s valuation, producing a new value exceeding $28, a result that finally provided the plaintiff a higher judicial valuation than the market and disinterested corporate actors had produced 20 years before.\textsuperscript{50} Litigation such as this does little to refute the aura of dysfunctionality about appraisal.

II. The Promise of the MBCA Approach to Ongoing Statutory Revision

At the time the Model Business Corporation Act was first published in 1950, appraisal had not moved beyond its roots of blanket coverage for shareholders of both companies in a merger and strict requirements for perfection of appraisal rights. The common law developments of de facto merger and the lawyerly innovations of triangular mergers described above occurred beyond the range of the statute. The MBCA did adopt a market out exception in 1969 but then fairly quickly retreated from that change.\textsuperscript{51}

The first stirrings of reform occurred in 1978 with a series of amendments that reflected the growth of squeeze out possibilities in cash out mergers. For the first time, the company was required to pay its estimate of fair value at the time of the transaction as opposed to being able to deny shareholders any money until the conclusion of litigation.\textsuperscript{52} More of the burden of litigation was shifted to the corporation, requiring it to bring the litigation, to provide advance notice to the shareholders, to provide a copy of

\textsuperscript{50} The interest award was even more amazing. At an earlier point in time, the chancery court applied an interest rate of 10.32% to apply through the 1990 ruling. The Supreme Court applied this interest through an additional 15 years (which was a period of lower inflation) with the result that plaintiffs recovered interest that was eight times their principal.

\textsuperscript{51} See, Alfred F. Conard, Amendments of Model Business Corporation Act Affecting Dissenters’ Rights (Sections 73, 74, 80 and 81), 33 Bus. Law. 2587, 2595-2596 (1978) (the committee that deleted the market out in 1977 noted that the exception for surviving corporations with less than a 20% change in their stock outstanding addressed the context where the need for the stock market exception was strongest.)

\textsuperscript{52} See Conard, supra note 51.
the statute, and in most circumstances to pay the costs of the proceedings.\textsuperscript{53} These changes were incorporated into the 1984 “Revised” act, the largest structural change in the Act’s history and one which spurred a larger number of states to reform their corporations code. As a result, the earlier appraisal reforms gained a wider footing in the states that is still visible today; the 1984 platform remains the most common format for state appraisal statutes.\textsuperscript{54}

The MBCA’s appraisal chapter was completely revised in 1999.\textsuperscript{55} The 1999 language caught up to the developments of the prior thirty years in terms of significantly narrowing the transactions giving rise to appraisal. Shareholders in surviving corporations no longer had appraisal, not just for transactions in which the dilution of their shares was less than 20%, but even for changes of the largest magnitude.\textsuperscript{56} Narrowing also occurred on the target side with the reinsertion of a market out exception.\textsuperscript{57} At the same time, the 1999 changes made some improvements relevant to minority shareholders who had been squeezed out against their will in a cash out merger. Fair value was defined to remove the exclusion for value created by the merger;\textsuperscript{58} discounts for lack of marketability or minority status (which had limited value received by minority shareholders in a number of cases) were forbidden, and the statute was expanded to provide interest.\textsuperscript{59}

The American Law Institute’s Principles of Corporate Governance, a fifteen year project that concluded in the early 1990s, put conflict of interest at the center of its appraisal analysis, providing support for some of the MBCA’s 1999 changes just discussed.\textsuperscript{60} Yet, the MBCA’s move from a traditional liquidity-providing statute to one focused on conflict of interest was not yet fully formed. Conflict of interest was mentioned somewhat indirectly as an exception to the market out exception to appraisal rights for target company shareholders.\textsuperscript{61} Fiduciary duty challenges to conflicted cash-outs were made more difficult in that the exclusivity of appraisal was actually made stronger with removal of language in the 1984 MBCA that had been used as the basis to expand recovery beyond appraisal.\textsuperscript{62}

\begin{footnotesize}
\begin{enumerate}
\item See Conard, supra note 51.
\item The Model Business Corporation Act Annotated (4\textsuperscript{th} Ed.) reports the MBCA as the basis for corporations statutes in 30 states. Of those, two-thirds rely on the 1984 statute as the basis for their law in the appraisal area and 10 use the two later sets of amendments.
\item See supra note 51 at ix.
\item Mod. Bus. Corp. Act §13.02.
\item 55 Bus. Law. 405 (1999).
\item The pre 1999 MBCA language qualified the exclusion for value created by the merger “unless the exclusion would be inequitable.” Such a clause was the principal vehicle permitting courts in a cash out merger setting to shape fair value to prevent misuse by majority shareholders. The changes to fair value in some sense serve a similar function, but there was no longer a specific pointer to courts to take into account conflict of interest.
\item 55 Bus. Law. 405 (1999).
\item See, e.g. American Law Institute, Principles of Corporate Governance: Analysis and Recommendations (1993) §7.22(c), Comment c (appraisal “to assist shareholders to police conflicts of interest”). Another prominent source of reform in appraisal was California’s statute which provided both broader appraisal rights and alternative rights for conflict transactions. See Cal. Corps. Code §§1300, 1312(b).
\item 55 Bus. Law. 405 (1999).
\item See the discussion in note 58. See generally, 55 Bus. Law. 405 (1999).
\end{enumerate}
\end{footnotesize}
The 2006 changes make clear the shift of appraisal away from liquidity toward fiduciary duty policing of conflict of interest. A conflicting interest transaction was for the first time included in the definition section.\textsuperscript{63} The market out section received much clearer language specifying that all conflicting transactions continued to have appraisal even in public companies.\textsuperscript{64} The exclusivity of appraisal does not apply to an interested transaction unless there has been a "cleansing action" as specified in the general conflict of interest sections of subchapter F of chapter 8.\textsuperscript{65}

With these most recent changes, it is clearer than it has ever been that the appraisal context is more about conflict of interest than liquidity. Appraisal will now only apply to a few arm’s length transactions, consistent with the decades long move to accepting majority decision-making in those settings. Valuation standards and some procedural changes have been made so that when appraisal is used in conflict transactions the historical biases from the liquidity setting will not work to penalize minority shareholders who have been squeezed out.

In contrast to these dramatic changes, Delaware during the same period has made more than a dozen statutory changes to its statute, but none have been large.\textsuperscript{66} Instead Delaware has relied on its case law in an effort to bring its law current. Valuation was changed by UOP as discussed earlier,\textsuperscript{67} discounts have been precluded by other decisions,\textsuperscript{68} exclusivity of appraisal cabined by a combination of UOP and Kahn,\textsuperscript{69} common law protections added to short form mergers have considerably expanded protection against majority overreaching in that context.\textsuperscript{70} The substance in Delaware clearly reflects the new context for appraisal; Delaware judges understand it, but legislatures and judges elsewhere still don’t always get it.

The current MBCA is better positioned to communicate clearly the legal approach to appraisal. The statutory approach, informed by the guidance in the official comments, sets out the core principles behind the statute:

\begin{enumerate}
\item Appraisal (the right for an individual shareholder to require the corporation to pay a judicially determined fair value of the shares) exists only for fundamental changes and only for the subset of fundamental changes where “uncertainty” about the fair value of the shares casts doubt on the fairness of the transaction.\textsuperscript{71}
\end{enumerate}

\begin{itemize}
\item \textsuperscript{63} Model Bus. Corp. Act §13.01 (5.1).
\item \textsuperscript{64} Model Bus. Corp. Act §13.02.
\item \textsuperscript{65} Model Bus. Corp. Act §13.40.
\item \textsuperscript{66} The most significant change has been three amendments to address interest, now providing a presumption of an interest rate that is 5% over the Federal Reserve Board’s discount rate.
\item \textsuperscript{67} Weinberger v. UOP, Inc. 457 A. 2d 701 (Del. 1983).
\item \textsuperscript{68} Cavalier Oil. Co. v. Harnett, 564 A.2d 1137 (Del. 1989).
\item \textsuperscript{69} Weinberger v. UOP, Inc. 457 A. 2d 701 (Del. 1983); Kahn v. Lynch Communications, Inc, 638 A.2d 1110 (Del. 1994).
\item \textsuperscript{70} See cases discussed in note 42, supra.
\item \textsuperscript{71} 3 MBCA Annotated (4th Ed) at 13-7. Otherwise shareholders are relegated to the usual protections of voting, gatekeepers and the various markets.
\end{itemize}
(2) Uncertainty is sufficiently reduced (for purposes of removing the need to provide shareholders this additional remedy beyond the usual protections provided by voting, gatekeepers, markets etc.) so long as shareholders can sell their shares in a market that is liquid and reliable.\textsuperscript{72}

(3) Liquidity is measured by the efficiency of the market; reliability is measured by the absence of conflict.\textsuperscript{73}

The last point (conflict) is the most important and easiest to apply. What it means is that shareholders can use appraisal to receive a judicial determination of value when the directors and majority shareholders push them out in an interested transaction. Shareholders are not forced to accept terms set by an interested party.\textsuperscript{74}

The liquidity point is not as clear. As set out in the Model Act it means that in an arm’s length (non-conflicted) transaction, shareholders can use appraisal to receive a judicial determination of value when directors/majority shareholders implement a transaction and the corporation is non-public. Shareholders who have a non-liquid investment are not forced to go along with the majority into a changed investment.

But this is where the current Model Act approach loses a bit of coherence. This liquidity protection for shareholders with non-publicly traded shares extends only to the disappearing corporation in the merger, not the surviving corporation. It could be that the statute’s drafters have implicitly accepted the final period argument that shareholders of the surviving corporation are sufficiently protected because their managers and directors make that deal knowing they will continue to be subjected to voting, gatekeepers and market constraints that will discipline their choices, but that the managers of the disappearing company are in a final period such that they will ignore the discipline from those forces and make a bad deal for shareholders (albeit one approved by a majority) such that an additional legal remedy is needed in the form of appraisal. Such a distinction practically disappears (although maintained by the statute) in a “merger of equals” context where two entities of similar size combine in a way that seeks to preserve the managers, directors, and employees of both even if the legal form is to have one entity merge into the other. The MBCA gives an extra legal protection to one group of shareholders in this deal but not the other. Similarly if planners have structured an upside-down transaction where the ostensible surviving corporation is

\textsuperscript{72} Id at 13-26.
\textsuperscript{73} Id at 13-27.
\textsuperscript{74} There is an anomaly in the Model Act which is difficult to square with this approach in that the 2006 language seems to exclude from appraisal a short form merger (permitted by MBCA Section 11.05) in a publicly traded company, which is clearly an interested transaction. The 2006 MBCA provides a market out unless the transaction is an interested transaction, in which case appraisal will be available. “Interested transaction” is defined by new §13.01 (5.1) to mean a “corporate action described in 13.02(a), other than a merger pursuant to §11.05, involving an interested person…” Since the short form is excluded, the market out will apply so that appraisal will not be available where a controlling shareholder owns more than 90% of the shares, the remaining shares are traded on a public market, and the parent implements a short form merger on terms that the minority thinks is unfair. In this setting Delaware says that appraisal is exclusive, with various procedural qualifications to insure price is fair. See e.g. Glassman v. Unocal Exploration Co., 777 A.2d 242 (Del. 2001); Berger v. Pubco Corp., 976 A.2d 132 (Del. 2009). Under the MBCA, the opposite seems to be the case in that there would be no appraisal.
actually issuing enough shares that its shareholders will lose effective control to the ostensible disappearing company, the Model Act would not provide relief (absent a return of de facto doctrine which the statute and comments do not mention.) At one point in discussing which types of amendments to the articles of incorporation should trigger appraisal, the Official Comment concedes that such line-drawing is arbitrary and then provides appraisal for no amendments except for reverse stock splits (which reflects concern over conflicts of interest.) A similar conclusion about the arbitrary nature of appraisal in non-interested transactions more generally seems appropriate.

The largest drawback to the MBCA approach is that the states have been slow to adopt it. Two have adopted the 2006 approach. Only eight more have yet implemented even the 1999 changes with its partial embrace of the conflict context. Twenty continue to follow the 1984 Model Act that ill-equips judges to coherently deal with appraisals in a conflict context. Clearly one disadvantage of an iterative approach to statutory reforms is the small number of states that are willing to revisit their corporations code on a recurring basis. It took three tries for the Model Act to get this far and the result is that the 30 states that use the MBCA format are scattered across a spectrum between liquidity and conflict so that their judges don’t always get the full picture. Most of the remaining states have a market out exception but few of the more recent innovations that reflect the modern context in which appraisal contests arise.

Conclusion

Societal views as to when it is appropriate to let shareholders require their corporation to provide liquidity when undertaking fundamental changes and the extent to which majorities can force minorities out of corporation in a form of eminent domain have changed dramatically over the last century. We have seen two different models as to how law responds to such changes in the underlying economy and society. Delaware has left its statute essentially static for more than four decades and relied upon its courts to make fundamental changes in the application of the words. The Model Business Corporation Act has, through a series of suggested changes to the statutory language, dramatically reshaped the legal rules and explained its new approach.

In its current language, the Model Act has made enormous strides toward an effective remedy for the modern “conflict” context of appraisal. A legitimate question is whether appraisal does anything that fiduciary duty, the traditional common law

---

regulator of conflict of interest, could not do if there were no appraisal chapter. To some extent the appraisal statutes are a codified conflict of interest procedure that could become the basis for a more general conflicts statute. Delaware cases show the essential overlap between appraisal actions and common law fiduciary duty claims for entire fairness.\textsuperscript{77} The dispersion of statutory language in MBCA jurisdictions illustrates the continuing importance of judicial interpretations even when statutes are regularly reformed. But most importantly, the changes to the Model Act prevent the historical appraisal language and its outdated applications from distorting its application in the modern context of cash out mergers and provide a more coherent framework for addressing appraisal as a part of corporate governance in the modern corporation.
