I. Introduction  

The United States’ National Security Strategy (“NSS”), issued in May 2010, articulates an expansion in U.S. interests that stems from the end of the Cold War. Departing from a policy of industrial growth and military containment in response to geopolitical threats, U.S. national security is now defined in terms of a wide range of potential risks that the country faces. 

The NSS, for instance, ties the economy, education, immigration, infrastructure, science and innovation, alternative forms of energy, health care, and reductions in the federal deficit to U.S. national security.¹ It calls for a “seamless coordination among Federal, state, and local governments to prevent, protect against, and respond to threats and natural disasters.”² A “whole of government approach” will integrate the skills and capabilities of the country’s military and civilian institutions, including, inter alia, merging the staffs of the National Security Council

². Id. at 2.
(“NSC”) and Homeland Security Council. In addition to foreign policy and international military concerns, the NSC will now also focus on trade, travel, organized crime, domestic intelligence gathering and dissemination, terrorism, public health, and natural disasters.

The NSS is not alone in its rather expansive view of U.S. national security. The Quadrennial Defense Review (“QDR”), for example, issued in February 2010, cites threats related to the global commons, cybersecurity, climate change, and energy. The Quadrennial Intelligence Community Review (“QICR”), issued in January 2009, proclaims the dawn of a new era, requiring a “fundamental transformation of the national security establishment.” It identifies seven key variables underlying the unique threats now faced by the United States: political and military, social and cultural, demographic and health, domestic environment, innovation and technology, energy and environment, and economic and financial.

What these and other articulations share in common is a significantly expanded view of what constitutes U.S. national security—one which differs not just from
that which dominated during the Cold War, but also from any point in U.S. history. This is not the first shift in how the country has looked at its security interests. It is, however, by far the most expansive. And it is beginning to find root in the law, with significant constitutional implications.

This Article argues that the current expansion represents the fourth and most troubling epoch in the evolution of the country’s approach to national security, one that raises concern about the distribution of power within the U.S. constitutional structure. It suggests that each epoch resulted in alterations to the domestic and foreign affairs structures of the federal government—components generally considered to lie in different realms, but, in fact, equally important in conceptions of U.S. national security.

The Article begins by considering what, exactly, is meant by “national security.” It posits a Hamiltonian definition—the laws and policies directed at protecting the national government in its efforts to aid in the common defense, preserve public peace, repel external attacks, regulate commerce, and engage in foreign relations. National security is thus rooted in concepts directly related to national sovereignty.

The Article then returns to the Founding and suggests that the first epoch, which extended from 1776 to 1898, was marked, primarily, by the drive to Union and, secondarily, by the goals of establishing international independence and building the country’s economic strength. The Civil War represented a reversion to Union as the core of American national security, with recourse to international independence and economic growth following the defeat of the Confederate States.

The Spanish-American War brought the first epoch to a close, leading to the second era, from approximately 1898 to 1930, in which U.S. national security expanded to include a formative agenda in the global environment. The United States would no longer be content to react to foreign developments; it would seek to shape the international arena. Domestically, the government sought to limit the growing strength of private sources of power. Tensions between the goals of the first age (international independence and economic growth) and those of the second (engagement and dominance over potential rivals for domestic authority) resulted in power struggles between the federal branches of government.

During the third epoch, which reached from the 1930s to 1989, national security became the United States’ overriding interest, rendering all other concerns subservient. The economy, education, housing, health care, civil rights—all these became seen through a new lens, gaining for national security a privileged position within the domestic discourse. Glimmers of this epoch first appeared with the country’s near-simultaneous entry into World War I and the domestic introduction of

9. The Federalist No. 23 (Alexander Hamilton) (“The principal purposes to be answered by union are these—the common defense of the members; the preservation of the public peace as well against internal convulsions as external attacks; the regulation of commerce with other nations and between the States; the superintendence of our intercourse, political and commercial, with foreign countries.”), available at http://www.constitution.org/fed/federa23.htm.
measures meant to counter the threat of totalitarianism. It was during this rise of totalitarianism in the 1930s, however, that the age took hold. World War II and the advent of the Cold War narrowed the focus to one form of threat. Containment of communism—particularly with respect to the Soviet Union and its expansionist designs—became the overriding goal. As a matter of foreign policy, the country emphasized military engagement and development aid, while focusing at a domestic level on fostering closer relationships among industry, science, and political institutions. Strides in the domestic civil rights arena also became an important response to Soviet allegations of democratic injustice.

The fourth and most recent epoch in the evolution of U.S. national security emerged in 1989 with the fall of the Berlin Wall. National security dominates the domestic discourse as it did during the third epoch, making it the United States’ most powerful institutional engine. Risks, broadly defined, have become folded into the national security framework. Emphasis is now placed on the effects that may result should any of the anticipated risks become manifest. The intent of bad actors, either state or non-state actors, matters only within the context of responding to the specific threat. As a practical matter, this means that actor-less threats, such as pandemic disease, are now treated as matters of national security. Under the approach of the fourth epoch, global security—the security interests of other countries and regions—has become intertwined with U.S. national security. The line between foreign and domestic has begun to fade. Moreover, areas outside the traditional national security framework, such as climate change, public health, drugs, and criminal law, have been drawn into the national security infrastructure. Perhaps most significantly, executive branch authorities have rapidly expanded, raising a number of constitutional concerns.

II. DEFINING U.S. NATIONAL SECURITY

The first question in any historical exposition of the United States’ approach to national security is: What, exactly, is meant by “national security”?

One approach might be to begin by exploring usage of the term itself. As a historical matter, some scholars argue that such a course may be inadvisable—not least because the term is primarily a creature of the twentieth century. This is the position taken by Professor Ernest May. According to this view, the National Security Act of 1947 signals the beginning of a new age. Professor Harold Koh largely agrees, anchoring modern usage of the term in the National Security Act of 1947. Thus, he similarly dates the use of the term to the mid-twentieth century
and, specifically, to the start of the Cold War. 14

These claims, however, overlook earlier usage. During the Constitutional Convention, according to James Madison’s notes, Oliver Ellsworth remarked that a national government would help to secure national security. 15 This function lay at the core of the new structure of government under the Constitution: the national government could only embrace such objects of a more general nature than those pursued by the states. 16 The very purpose of the Convention was to address the shortcomings of the Articles of Confederation, foremost amongst which was its failure to produce security against foreign invasion. 17

Mark Shulman, who provides a thoughtful analysis of the origins of the National Security League, similarly suggests that the positions etched out by May and Koh fall short. He points to debates held at Yale in the 1790s, where Yale undergraduates considered whether “National Security depend[s] on fostering Domestic Industries?” 18 Indeed, throughout the remainder of the eighteenth century and into the nineteenth century, similar discussions marked the contours of America’s national interests. 19 By 1853, Franklin Pierce in his Inaugural Address discussed national security in the light of the Compromise of 1850. 20 One year later, in response to information received that citizens were preparing to send a military expedition to invade Cuba, the President issued a proclamation, warning that the decision to invade would undermine U.S. national security. 21 Shortly thereafter, reflecting on the French Revolution, articles appearing in the newspapers tied the impact of the National Security Act of 1947 and the evolution of associated authorites, see DOUGLAS T. STUART, CREATING THE NATIONAL SECURITY STATE: A HISTORY OF THE LAW THAT TRANSFORMED AMERICA (2008) and AMY ZEGART, FLAWED BY DESIGN: THE EVOLUTION OF THE CIA, JCS, AND NSC (1999).

16. Id.
19. See, e.g., Victor S. Clark, The Influence of Manufactures Upon Political Sentiment in the United States from 1820–1860, 22 AM. Hist. Rev. 58, 58, 63 (1916) (explaining how political leaders, such as Thomas Jefferson and John C. Calhoun, framed debates about protecting domestic manufactures in national security terms).
20. See President Franklin Pierce, Inaugural Address (Mar. 4, 1853), in INAUGURAL ADDRESSES OF THE PRESIDENTS OF THE UNITED STATES 115, 122 (Bicentennial ed. 1989) [hereinafter INAUGURAL ADDRESSES] (highlighting the threat to “national security” presented by the conflict over slavery and suggesting, “We have been carried in safety through a perilous crisis. Wise counsels, like those which gave us the Constitution, prevailed to uphold it. Let the period be remembered as an admonition, and not as an encouragement, in any section of the Union, to make experiments where experiments are fraught with such fearful hazard.”).
21. See Invasion of Cuba—The President’s Proclamation, N.Y. DAILY TIMES, June 1, 1854, at 1 (stating the government claims a right and duty to interfere with the proposed invasion to protect the “honor of its flag, the rights of its citizens, the national security and the preservation of the public tranquility”).
concept of national security to national fraternity.\textsuperscript{22} During the Civil War, the term “national security” was bandied about in justification for each side’s position—with slavery and the dangerous influences of wealth cited in the North, and northern invasion highlighted by the South, as undermining national security.\textsuperscript{23}

“National security” is thus not a creature of the twentieth century.\textsuperscript{24} Despite its appearance throughout history and its use in relation to statutory authorities, however, “national security” is rarely defined. The National Security Act of 1947, for instance, refers to “national security” more than 100 times; yet nowhere does it define the term.\textsuperscript{25} The Foreign Intelligence Surveillance Act of 1978 similarly refers to “national security” nearly a dozen times in a manner of some consequence.\textsuperscript{26} It uses the term, for example, in relation to placing matters within the purview of the Foreign Intelligence Surveillance Court (“FISC”), determining who can certify an application to FISC, and authorizing \textit{in camera} and \textit{ex parte} proceedings.\textsuperscript{27} Attorney General determination of a national security threat allows officials to secretly search and seize property—effectively waiving notice otherwise required under the Fourth Amendment.\textsuperscript{28} Despite the work being done by this concept, however, no definition is provided. Nor does the omnibus 2001 USA PATRIOT Act define the term—despite more than two dozen references to it and the significant expansion of executive power premised upon matters falling within its purview.\textsuperscript{29} Myriad other statutory examples present themselves.\textsuperscript{30}

\item \textsuperscript{22} See L. Kossuth, \textit{Letters from L. Kossuth: American Interference in European Affairs—Prospects of Revolution The Peace Question, &c.}, N.Y. DAILY TIMES, Jan. 21, 1856, at 4 (“[T]he principle of national fraternity is more than a philanthropic emotion . . . it is the only true basis of national security . . . .”).
\item \textsuperscript{23} See, e.g., The Republican Party and Our Relations with Mexico, N.Y. TIMES, Mar. 29, 1860, at 2; Sympathy with the South, N.Y. TIMES, Dec. 10, 1859, at 4; The Am. Abolition Soc’y, The Anniversaries, N.Y. DAILY TIMES, May 15, 1857, at 1; Ex-Secretary Guthrie’ s Return to Louisville—His Address, N.Y. DAILY TIMES, Mar. 27, 1857, at 2.
\item \textsuperscript{24} See supra note 10 and accompanying text.
\item \textsuperscript{27} See, e.g., 50 U.S.C. § 1803(e) (2006 & Supp. 2010) (“[T]he court . . . shall adopt and, consistent with the protection of national security, publish procedures for the review of petitions . . . .”); 50 U.S.C. § 1804(a)(6) (2006 & Supp. 2010) (“a certification [by] an executive branch official or officials designated by the President from among those executive officers employed in the area of national security or defense . . . .”); 50 U.S.C. § 1806(f) (2006 & Supp. 2008) (“[T]he United States district court in the same district as the authority, shall, notwithstanding any other law, if the Attorney General files an affidavit under oath that disclosure or an adversary hearing would harm the national security of the United States, review in camera and ex parte the application, order, and such other materials relating to the surveillance as may be necessary . . . .”); see also 50 U.S.C. § 1845(f) (2006) (similar to 1806(f)).
\item \textsuperscript{28} 50 U.S.C. § 1825(b) (2006 & Supp. 2008).
\item \textsuperscript{29} Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act (USA PATRIOT Act) of 2001, Pub. L. No. 107-56, § 412, 115 Stat. 272, 350–52 (codified at 8 U.S.C. § 1226(a)). Of particular note is section 505: Miscellaneous National Security Authorities, which significantly expands “National Security Letters” to include a broader range of information and organizations
\end{itemize}
On the rare occasion statutory definitions appear, the term is understood broadly.\textsuperscript{31} According to the current Classified Information Procedures Act, for instance, national security involves matters related to the “national defense and foreign relations of the United States”—an amorphous description, open to wide interpretation.\textsuperscript{32} Where statutes provide definitions of the term linked to other activities, those definitions prove similarly broad. In the amended National Security Act, for instance, the term “intelligence related to national security” refers to all intelligence, regardless of the source from which derived and including information gathered within or outside the United States, that—

(A) pertains, as determined consistent with any guidance issued by the President, to more than one United States Government agency; and
(B) that involves—
   (i) threats to the United States, its people, property, or interests;
   (ii) the development, proliferation, or use of weapons of mass destruction; or
   (iii) any other matter bearing on United States national or homeland security.\textsuperscript{33}

from which information can be obtained via administrative subpoena absent prior judicial approval. See \textit{id.} at § 505.

30. See, e.g., 8 U.S.C. § 1226a (2006) (giving the Attorney General the authority to detain an alien where the Attorney General has reasonable grounds to believe that the alien “is engaged in any . . . activity that endangers the national security of the United States,” without defining what constitutes “national security”); American Recovery and Reinvestment Act of 2009, Pub. L. No. 111-5, 123 Stat. 115 (referring to items related to the national security interests of the United States, as well as the authority to exclude posting contractual or other information when necessary to protect national security, without specifying what precisely is meant by the term); Omnibus Appropriations Act of 2009, Pub. L. No. 111-8, 123 Stat. 524 (allocating funding for “activities related to national security” without specifying the meaning of the term); Enhanced Partnership with Pakistan Act of 2009, Pub. L. No. 111-73, 123 Stat. 2060 (giving the Secretary of State the authority to waive certain limitations where the Secretary determines and certifies “that it is in the national security interests of the United States to do so,” without defining the term); Department of the Interior—Appropriation, Pub. L. No. 111-88, 123 Stat. 2904 (2009) (requiring “An assessment of any risk to the national security of the United States or its citizens,” without specifying what is meant by national security); Supplemental Appropriations Act, Pub. L. No. 111-212, 124 Stat. 2302 (2010) (authorizing the President to access additional funding for assistance to Afghanistan, Iraq, and Pakistan, where he finds and certifies “that exercising the authority of this section is necessary to protect the national security interests of the United States but not defining the term); National Aeronautics and Space Act Pub. L. No. 111-314, 124 Stat. 3328 (2010) (“The Administrator shall establish such security requirements, restrictions, and safeguards as the Administrator deems necessary in the interest of the national security,” without defining the term).

In similar manner, the Federal Information Security Management Act of 2002, which provides government-wide rules for information security, defines “national security system” as any system:

(i) the function, operation, or use of which—
   (I) involves intelligence activities;
   (II) involves cryptologic activities related to national security;
   (III) involves command and control of military forces;
   (IV) involves equipment that is an integral part of a weapon or weapons system; or
   (V) subject to subparagraph (B), is critical to the direct fulfillment of military or intelligence missions; or
(ii) is protected at all times by procedures established for information that have been specifically authorized under criteria established by an Executive order or an Act of Congress to be kept classified in the interest of national defense or foreign policy. 34

The effect is rather circular: material is classified because it is interpreted by officials as being related to national security, even as national security data is defined as material that has been classified.

Executive branch articulations prove equally broad. Consider the George W. Bush Administration’s directive governing the design of the National Security Council: “National security,” the document stated, “includes the defense of the United States of America, protection of our constitutional system of government, and the advancement of United States interests around the globe.” 35 Exactly what constituted national defense was nowhere explained, nor were limits proposed for the U.S. interests in question.

Precise meaning of the term, if anything, has become even more elusive. President George W. Bush’s five-page National Security Presidential Directive 1 referred to “national security” thirty-three times without offering any definition. 36 The Obama Administration overwrote Bush’s national security presidential directives, replacing them with presidential policy directives. 37 Presidential Policy Directive 1 (“PPD-1”), which addresses the National Security Council, refers to

36. See id.
“national security” thirty-three times but nowhere defines it.\(^{38}\) The Obama Administration’s first Presidential Study Directive similarly stopped short of defining the phrase, although it did state that the concept should be thought of coincident with “homeland security.”\(^{39}\) The logic stemmed from a broad concept of risk: both “national security” and “homeland security” reflect policies “designed to keep our country secure and our citizens safe.”\(^{40}\)

The Supreme Court, for its part, has recognized national security as a compelling interest, and one with regard to which, in certain settings, deference should be given to the political branches.\(^{41}\) In Korematsu v. United States, for instance, the Court, applying strict scrutiny for the first time, upheld the detention of American citizens: national security proved a compelling government interest.\(^{42}\) In Haig v. Agee, the Court echoed its earlier decision, stating that it was “‘obvious and unarguable’ that no governmental interest is more compelling than the security of the Nation.”\(^{43}\) It lay at the core of federal responsibilities—it was the very purpose of the federal government.\(^{44}\) In Holder v. Humanitarian Law Project, the Court again deferred to the executive branch.\(^{45}\) The political and highly variable nature of the interest at stake often underlies such decisions.\(^{46}\) This is the consideration at

---

\(^{38}\) See id.

\(^{40}\) Id. at 2.

\(^{41}\) Even as he denied President Truman the authority to seize steel mills on U.S. soil, for instance, Justice Jackson wrote in Youngstown Sheet & Tube Co. v. Sawyer, “I should indulge the widest latitude of interpretation to sustain [the President’s] exclusive function to command the instruments of national force, at least when turned against the outside world for the security of our society.” 343 U.S. 579, 645 (1952).

\(^{42}\) Korematsu v. United States, 323 U.S. 214, 223 (1944) (“[Korematsu was excluded from the Military Area] . . . because the properly constituted military authorities feared an invasion of our West Coast and felt constrained to take proper security measures . . . .”); cf. Hirabayashi v. United States, 320 U.S. 81, 114 (1943) (“[Citizens of a particular racial group] . . . though subject to requirements of national security and military necessity, should at all times be accorded the fullest consideration and respect. When the danger is past, the restrictions imposed on them should be promptly removed and their freedom of action fully restored.” (Douglas, J., concurring)); Michael Klarman, An Interpretive History of Modern Equal Protection, 90 M I C H. L. REV. 213 (1991) (discussing Korematsu and the origins of strict scrutiny). Although these cases are almost universally condemned, they demonstrate the seriousness with which the judiciary views matters of national security.

\(^{44}\) See, e.g., Youngstown, 343 U.S. at 662 (Clark, J., concurring) (concluding the President’s grant of authority is extensive precisely because of the ultimate responsibility to protect the security of the nation).

\(^{46}\) See, e.g., id. at 2711 (“[R]espect for the Government’s factual conclusions is appropriate in light of the courts’ lack of expertise with respect to national security and foreign affairs, and the reality that efforts to confront terrorist threats occur in an area where information can be difficult to obtain, the impact of certain conduct can be difficult to assess, and conclusions must often be based on informed judgment rather than concrete evidence.”); Ashcroft v. al-Kidd, 131 S. Ct. 2074, 2087 (2011) (“The consequences of that deterrence must counsel caution by the Judicial Branch, particularly in the area of national security.”); Winter v. Natural Res. Def. Council, Inc., 555 U.S. 7, 18 (2008) (accordig deference to the President after explicitly finding: “The President determined that continuation of the exercises as limited by the Navy was ‘essential to national security.’”); Boumediene v. Bush, 553 U.S. 723, 802 (2008) (“All that today’s opinion has done is shift responsibility for those sensitive foreign
the heart of the state secrets privilege.  

Even as it has overtly noted the compelling interest involved in national security matters, the Court has acknowledged that the term is frustratingly broad, giving rise to important constitutional concerns. In New York Times Co. v. United States, for example, the Court determined that the government had failed to show that publication of the Pentagon Papers would irreparably harm U.S. national security.  

Justice White wrote that the government conceived of “national security” as giving the President the authority to prevent anything that threatens “grave and irreparable” injury to the public interest.  

For him, such powers were too sweeping.  

Justice Black similarly objected: “The word ‘security’ is a broad, vague generality whose contours should not be invoked to abrogate the fundamental law embodied in the First Amendment.”  

Black continued, “The guarding of military and diplomatic secrets at the expense of informed representative government provides no real security for our Republic.”  

Justice Black’s words echo those of other jurists. In Youngstown Sheet and Tube Co. v. Sawyer, Justice Jackson noted that the President’s power, at least when turned inward, “is not such an absolute as might be implied from that office in a militaristic system but is subject to limitations consistent with a constitutional Republic . . . .”  

Chief Justice Hughes in De Jonge v. Oregon in 1937, a case that questioned whether Oregon’s criminal syndicalism statute fell afoul of Fourteenth
Amendment due process, similarly wrote:

The greater the importance of safeguarding the community from incitements to the overthrow of our institutions by force and violence, the more imperative is the need to preserve inviolate the constitutional rights of free speech, free press and free assembly in order to maintain the opportunity for free political discussion . . . . Therein lies the security of the Republic, the very foundation of constitutional government.\textsuperscript{54}

Justice O’Connor expressed similar unease in \textit{Hamdi v. Rumsfeld}.\textsuperscript{55} At issue was whether the executive could indefinitely detain a U.S. citizen absent basic due process.\textsuperscript{56} Justice O’Connor wrote: “We recognize that the national security underpinnings of the ‘war on terror,’ although crucially important, are broad and malleable.”\textsuperscript{57}

Examining the use of the term, then, while illuminating, fails to reach a more important question: \textit{How, over time, has the United States conceived of its national security interests?} It matters how one thinks about national security, not least because of the tautological risk, which is that if national security is conceived of as primarily economic, political, or military in nature, then one would look at the political, economic, and military laws and policies of the national government in response and find that conceptions of national security depended on the same.

With this caution in mind, I propose to examine the evolution of U.S. national security as \textit{understood by the interests that national security is intended to serve}. That is, I do not adopt a definition based on a specific subject matter, such as foreign relations. Instead, to understand what we mean by “national security” I look to the \textit{object} that is to be secured and the \textit{reason} for its preservation—the purpose for which such object exists.

The former, the object that is to be secured, is the political structure of government. As James E. Baker, Chief Judge of the U.S. Court of Appeals for the Armed Forces, has argued, the reason most definitions center on defense and foreign affairs is precisely because such concepts form the central functions of the State.\textsuperscript{58} At issue is the legitimacy of the governing institutions as intimately linked to their ability to protect the people, preserve the republic, and ensure their own existence—all functions integral to our constitutional design.

But the concept of national security does not end there, for the federal government arises from an underlying \textit{purpose}. One of the strongest articulations comes from Alexander Hamilton, who conceived the purpose of the Union as for “the common defense of the members; the preservation of the public peace as well

\end{itemize}
against internal convulsions as external attacks; the regulation of commerce with other nations and between the States; the superintendence of our intercourse, political and commercial with foreign countries.”

If this is the purpose for which our political structures were formed, a fundamental national interest must be to protect the State so that it may pursue these aims.

Hamilton underscored the importance of military capabilities to the common defense, but he was careful to explain that a broader range of threats may arise:

The authorities essential to the common defense are these: to raise armies; to build and equip fleets; to prescribe rules for the government of both; to direct their operations; to provide for their support. These powers ought to exist without limitation, because it is impossible to foresee or define the extent and variety of national exigencies, or the correspondent extent and variety of the means which may be necessary to satisfy them. For Hamilton, whether there ought to be a central government entrusted with acting in the common defense may be an open question. Once answered in the affirmative, however, the central government must be given the powers “requisite to complete execution of its trust.” In this understanding, it would make little sense to establish a government without providing it with the authority necessary to act on the purposes for which it was created.

For the present discussion, I thus understand national security to be the preservation of the political and constitutional structures in light of the purpose for which they were created. This conception is broader than that historically adopted in international relations or foreign relations, as it extends beyond the exercise of international power. It is part of my argument that U.S. national security cannot be understood solely in light of its external components. It must be considered in relation to the political institution of government itself, as influenced by both domestic and international concerns, that allows the institution to protect its ability to act in accordance with the purpose for which it has been created.

This understanding, however, still leaves unanswered where, precisely, one should look in order to determine how the United States has conceived of its

60. Id. (emphasis in original).

62. Id.
63. Prior to the end of the Cold War, the international relations field did not spend an inordinate amount of time debating what was meant by national security. Instead, the emphasis was almost entirely on military force, with minimal work being done by the term itself. David A. Baldwin, The Concept of Security, REV. INT’L STUD. 5, 9, 23 (1997), http://tau.ac.il/~daniel/pdfs/37.pdf. This led to a rather weak conceptualization of what was meant by national security. See generally BARRY Buzan, People, States and Fear: An Agenda for International Security Studies in the Post-Cold War Era (2nd ed. 1991). Until the end of the Cold War, articles that looked more carefully at the term itself proved few and far apart. See, e.g., Arnold Wolfers, “National Security” as an Ambiguous Symbol, 67 POL. SCI. Q. 483 (1952); Baldwin, supra, at 5–10.
national security interests over time.\textsuperscript{64} For purposes of this Article, I look to the executive branch as a whole, including, \textit{inter alia}, the different institutional arrangements within the executive branch designed to address U.S. national security. I also look to congressional grants of authority, appropriations, and oversight devices as a way to understand how the country has approached the concept of national security over time.\textsuperscript{65}

In this framing, executive articulations of U.S. interests take on a central role. The contours of what the executive can do in this area derive from the right of political institutions to defend themselves and the duties these institutions bear to the sovereign who created them—duties that range from protecting the lives and property of citizens, to ensuring the survival of the Constitution. They also reflect the strong role played by the executive branch with regard to the external affairs of the country.\textsuperscript{66}

\textsuperscript{64} It makes little sense to look broadly at the individuals making up the country to ascertain the approach; there would be as many opinions and variations as there are people. So one is forced to consider the collective—this is inherent in our concept of the people as sovereign. Representative institutions (both state and federal) and the constitutional design thus become the manifestation of U.S. national security interests. Here, the Constitution divides the authorities that constitute the purpose of national government among the federal branches. It is not always clear where the demarcations lie. This was precisely the intent of the Founders. According to Hamilton, the executive branch had a particular role to play in regard to some of the areas central to how I have defined national security—such as in defense of the nation, preserving public peace, repelling external attacks, and engaging in foreign relations. \textit{See} \textit{The Federalist} No. 70 (Alexander Hamilton). The concept of an energetic executive is taken to an extreme by proponents of what Professors Lawrence Lessig and Cass Sunstein refer to as a strong version of a unitary executive. \textit{See} Lawrence Lessig \& Cass Sunstein, \textit{The President and the Administration}, 94 COLUM. L. REV. 1, 2 (1994); Steven Calabresi \& Kevin Rhodes, \textit{The Structural Constitution: Unitary Executive, Plural Judiciary}, 105 HARV. L. REV. 1165, 1165 (1992). This concept of the executive branch is not without its critics. \textit{See}, \textit{e.g.}, Karl Manheim \& Allan Ides, \textit{The Unitary Executive}, L.A. LAWYER, Sept. 2006, at 24. Professors David Barron and Martin Lederman, for instance, acknowledge that there may be a compelling case to be made for a unitary and energetic executive in the realm of the armed forces—an area central to common defense and national security. \textit{See} David J. Barron \& Martin S. Lederman, \textit{The Commander in Chief at the Lowest Ebb—Framing the Problem, Doctrine, and Original Understanding}, 121 HARV. L. REV. 689 (2008). But even here, the original understanding of the President’s authority as Commander in Chief did not preclude other branches from playing a role in war making. \textit{Id.} at 696. As an empirical matter, the legislature has often assumed an active role in setting the terms of battle, as well as the conduct and organization of the armed forces. David J. Barron \& Martin S. Lederman, \textit{The Commander in Chief at the Lowest Ebb—A Constitutional History}, 121 HARV. L. REV. 941, 947 (2008) (“Throughout its history, Congress has in effect rejected the idea that ‘[w]ar is too difficult to plan for with fixed, antecedent legislative rules,’ and has even tried to manage the conduct of particular wars once they were under way by enacting statutes that were, in effect, attempts to second-guess or pretermit the President’s judgments. If anything, the congressional willingness to enact such laws has only increased during the very period in which the abdication paradigm has taken hold.”).

\textsuperscript{65} For the legislative branch, statutory instruments and legislative resolutions offer at least a majoritarian perspective.

\textsuperscript{66} As a constitutional matter, the President is granted considerable foreign affairs authorities in U.S. \textit{CONST. art. II, § 1} (executive power); U.S. \textit{CONST. art. II, § 2, cl. 1} (commander-in-chief authorities); and U.S. \textit{CONST. art. II, § 3} (power to recognize foreign governments). The President’s strong role with regard to foreign affairs has been further recognized by the other branches. \textit{See}, \textit{e.g.}, 6 ANNALS OF CONG. 613 (1800) (“The President is the sole organ of the nation in its external relations, and its sole representative with foreign nations.”); United States v. Curtiss-Wright, 299 U.S. 304, 319 (1936) (“Not only, as we have shown, is the federal power over external affairs in origin and essential character different from that over internal affairs, but participation in the exercise of the
Thus conceived, national security becomes an articulation of U.S. interests, the object of which is the protection of the American political entity, which is itself ordered by the Constitution. Its aims are thus essentially political in nature. The military may be required for the survival of the state as broadly conceived, but it is only one (albeit important) means to the ends. In a constitutional democracy, there are limits on the form such provisions can take without fundamentally altering the constitutional structure and protection of rights within the state.

III. THE FOUR EPOCHS

The guiding principle that I adopt in looking at the evolution of U.S. national security is to consider the laws and policies directed at protecting the national government in its efforts to aid in the common defense, to preserve public peace, to repel internal and external attacks, to regulate commerce, and to engage in foreign relations. With this framing, four major epochs in U.S. history emerge. They can be thought of in terms of concentric circles, each building on the basic tenets of the previous age.

The first age takes Union itself, (i.e., the establishment of the political institution of the national government), as a necessary condition of the country’s existence. To speak of national security at that time was to assume the continuation of the political entity. The Union thus represented the primary and most basic national security interest, upon which further national objectives might be built. To shore power is significantly limited. In this vast external realm, with its important, complicated, delicate and manifold problems, the President alone has the power to speak or listen as a representative of the nation. He makes treaties with the advice and consent of the Senate; but he alone negotiates. Into the field of negotiation the Senate cannot intrude; and Congress itself is powerless to invade it."

67. This articulation helps to explain why there is a pull towards a Machiavellian conception of national security, in which raison d’État may be invoked in justification for a wide range of measures.
68. I recognize that such an understanding embraces constitutionalism, opening the door to arguments that national security ought not to depend on constitutional framing.
69. Whilst any survey of U.S. history runs the risk of gross oversimplification, I nevertheless here attempt to sketch out the dominant shifts that mark the evolution of U.S. national security from the Founding to the present day. The purpose is to attempt to convey a sense of the evolution of history as informed by the country’s national security interests.
70. Although exceptions to the linear progression of U.S. interests can be found, there does appear to be a general trajectory towards further expanding what might be considered the United States’ core national security interests.
up the strength of the Union, a secondary aim—that of international independence and economic growth—could then be adopted.

In his *Farewell Address*, President George Washington laid out the guiding principles for this secondary aim, which endured for more than a century.\(^\text{71}\) Thus, from a very early date, the national government proved willing to act in support of its commercial interests with whatever diplomatic, legal, and military power it could muster.\(^\text{72}\) But when the integrity of the Union was threatened during the Civil War, retreat to the primary aim—preservation of the Union—occurred. Following the war, having settled the most serious challenge to the Union, attention returned to establishing international independence and economic growth. The first epoch thus spanned from the establishment of the Union through the end of the Civil War and Restoration.

The 1898 Spanish-American War proved pivotal, as did industrialization, in ushering in the second epoch. The United States began promoting its interests through formative political, military, and economic engagement in the international arena. This epoch can be seen in evolutionary terms because it rested on the security of having attained the primary and secondary interests of the first epoch: first, Union, and second, international independence and economic growth. Thus, where the primary and secondary interests appeared threatened, the country’s domestic and international response was to act in defense of such interests.

Tension arose during the second epoch in two key areas: First, U.S. international independence was undermined by the degree to which the United States assumed a more energetic role in the international environment—in defense of its commercial interests. Second, the national government’s power was challenged by growth of powerful domestic entities. As a result of these tensions, domestic power struggles ensued.

The third epoch emerged in the 1930s in response to the growth of totalitarianism.\(^\text{73}\) It witnessed the rapid promotion of national security as the overriding national issue, forcing other concerns into a subservient role. The attack on Pearl Harbor solidified this shift, with the Second World War further focusing American designs. No longer would the nation embrace merely a formative approach internationally, but as a political, economic, and military matter, it would assume

\(^{73}\) I reject 1941 as the start of this new era. Part of my argument is that such a demarcation fails to give sufficient weight to the impact of the growth of totalitarianism, and rather too much to the impact of the attack on Pearl Harbor. While it is certainly true that Pearl Harbor further solidified the preeminence of the national security dialogue, it was part of a much broader sweep, the momentum of which stemmed from a response to totalitarian ideology.
global dominance vis-à-vis the communist threat. This required, as a domestic matter, industrial-scientific-political integration and, as a foreign matter, military containment of the U.S.S.R. Notably, this period also witnessed burgeoning development aid to countries needing fortification in their resistance to communism.

We currently find ourselves in the fourth epoch. It arrived with the end of the Cold War and has transformed U.S. national security interests from simply limiting the spread of communism and the influence of the former U.S.S.R. (already a broad reading of U.S. global responsibilities), to balancing competing risks; climate change, pandemic disease, drugs, and organized crime thus find themselves in the same domain as economic vitality, energy, nuclear proliferation, biological weapons, and terrorism. National security persists in its position of dominance, constantly expanding to envelop other issues. The attacks of September 11, 2001 acted, much like Pearl Harbor, in vindicating a shift that had already occurred.

The current approach sidelines the importance of intent, emphasizing instead the potential impact of the threat on the country’s ability to protect its national institutions. Two effects follow. First, actor-less threats have crept into a domain previously reserved for geopolitical concerns. Second, the relative likelihood entailed by the risks thus considered proves less important in earning them a place in the national security infrastructure, than whether such threats (should they become manifest) have the ability to cause major disruptions in the instrument of government. This age is further characterized by the globalization of American interests in a broad range of areas. These disparate risks are serving to significantly strengthen the federal government, and the executive branch in particular, at great constitutional risk.

A. Protecting the Union: 1776–1898

It would be difficult to find a clearer example of a threat to U.S. national security than the Revolutionary War, which marked the Founding and the United States’ immediate efforts to secure its place among nations. The war turned on the question of whether the states would be united as an independent political entity. Once the Union was secured from immediate peril, President Washington charted a course that would enable the country to maintain international independence and to focus on economic growth. These twin secondary aims—international independence and economic growth—became the defining feature of the first epoch, in which the existence of the Union was understood to be a necessary precondition to

74. In dividing history into these epochs, I depart from the traditional International Relations model, which equates foreign policy with national security and thus focuses on three periods: non-intervention through World War I, followed by the rise of the country to a position of hegemony in the course of World War II, and merging into the Cold War. GEORGE C. HERRING, FROM COLONY TO SUPERPOWER: US FOREIGN RELATIONS SINCE 1776, at 6–7 (2008). The central debates stem from the realist school in opposition to the legacies of Wilsonian progressivism.
any other national interest. The twin aims translated abroad into diplomatic outreach, efforts to expand U.S. trade, and the development of military strength to withstand foreign aggression. At home, consideration turned to repaying war debts, strengthening the economy, and enlarging U.S. territory.

American colonists, of course, had been well aware of the importance of diplomacy and foreign relations in the context of military engagements. Benjamin Franklin had himself attempted to prevent war through secret negotiations with the British in 1774. Unsuccessful, it quickly became clear that only through obtaining the support of France and Spain would the New World be able to defeat Great Britain. In November 1775, the Continental Congress thus created the Committee of Secret Correspondence. From this Committee emerged the Model Treaty, which arranged for the colonists to receive weapons and foreign assistance in return for favorable commercial terms. Less than eighteen months after its creation, the Continental Congress renamed the Committee as the Committee for Foreign Affairs. Under the Articles of Confederation, the United States’ interests abroad became integrated into the Department of Foreign Affairs, with the first Secretary for Foreign Affairs taking office in August 1781.

Following the Founding, national security concerns did not abate. The Articles of Confederation failed in significant part because the national government lacked the authorities and resources to protect the Union. The country’s failure to earn the respect of other nations could hardly be ignored: Hamilton lamented, “We may indeed with propriety be said to have reached almost the last stage of national humiliation.” Foreign and domestic debt “contracted in a time of imminent peril for the preservation of our political existence” went unpaid. Foreign powers neglected to surrender American territories. As Hamilton commented, the country could ill protect its national interests: “We have neither troops, nor treasury, nor government.” Absent military might, diplomatic stature, and

commercial success, the country would cease to exist.\textsuperscript{85} 

The Constitutional Convention thus considered creating a national government with the authority necessary to secure the country against foreign aggression and internal dissolution.\textsuperscript{86} The 1787 Constitution strengthened the national government’s control over the military and foreign affairs, as well as over taxation and commerce, thus allowing the government to squarely address its national security interests.\textsuperscript{87} As scholars have long recognized, the great protection against the accretion of too much authority consisted of an intricate structure of separation of powers, checks and balances, federalism, and elections.\textsuperscript{88} 

Debt threatened the existence of the new nation and undermined the possibility of economic growth. President Washington thus wasted little time in calling on federal troops to suppress the Whiskey Rebellion.\textsuperscript{89} Opposition to paying taxes became synonymous with treason.\textsuperscript{90} The executive branch expanded, with President Washington and Vice President John Adams joined by a Secretary of State, Secretary of the Treasury, Secretary of War, and an Attorney General—offices

\textsuperscript{85} The Federalist No. 1 (Alexander Hamilton).
\textsuperscript{86} The Federalist No. 2 (John Jay).
\textsuperscript{87} See id. Foreign affairs divided between the President and the legislature, with the former granted the executive power, the authority to make treaties (with the advice and consent of two-thirds of the Senate), the power to appoint ambassadors and other ministers, and the authority to receive ambassadors. U.S. CONST. art. II, § 1 (Vesting Clause); U.S. CONST. art. II, § 2 (Treaty Clause); U.S. CONST. art. II, § 2, cl. 2 (Appointments Clause); U.S. CONST. art. II, § 3, cl. 3 (Receiving foreign representatives). The President was also apportioned the authorities of Commander in Chief of the Army and Navy, and of the militia, “when called into the actual Service of the United States.” U.S. CONST. art. II, § 2, cl. 1. Congress, in contrast, obtained the power to lay and collect taxes to pay off the national debt and to provide for the common defense and general welfare of the country—an authority central to perceptions of U.S. national security. U.S. CONST. art. I, § 8, cl. 1. In a similar fashion, the legislature obtained the authority to borrow money and regulate commerce with both foreign nations and among the states. U.S. CONST. art. I, § 8, cl. 2; see also U.S. CONST. art. I, § 8, cl. 3. It was given broad authority over the production of money. U.S. CONST. art. I, § 8, cl. 5. The authority to define and punish piracies and offenses was accompanied by the authority to declare war, grant letters of marquee and reprisal, and make rules concerning captures on land and water. U.S. CONST. art. I, § 8, cl. 10 (piracy and offences against the laws of nations); U.S. CONST. art. I, § 8, cl. 11 (power to declare war). Congress could raise and support the army in two-year increments, it could provide and maintain a navy, and it could make rules for the government and regulation of the land and naval forces. U.S. CONST. art. I, § 8, cl. 12 (raise and support armies); U.S. CONST. art. I, § 8, cl. 13 (provide and maintain a navy); U.S. CONST. art. I, § 8, cl. 14 (rules for government and regulation of the land and naval forces). Congress could also call forth the militia in the event of insurrection or foreign invasion. U.S. CONST. art. I, § 8, cl. 15 (calling forth the militia); U.S. CONST. art. I, § 8, cl. 16 (organizing, arming, and disciplining the militia). The Constitution further delegated to the legislature the authority “To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States.” U.S. CONST. art. I, § 8, cl. 17.

\textsuperscript{88} See The Federalist No. 51 (James Madison).
\textsuperscript{89} Thomas P. Slaughter, The Whiskey Rebellion: Frontier Epilogue to the American Revolution 212 (1986).
that emphasized the purpose for which the Union had been sought: foreign relations, economic growth, military strength, and the rule of law.92

In the international arena, President Washington sought to establish American independence.93 When war broke out in 1793 between Britain and France, Washington declared neutrality and warned that any citizen aiding or abetting hostilities against any of the powers involved would be refused U.S. protection.94 British troops, in turn, would be required to withdraw from the United States.95 Nonetheless, the door to international trade stood open. John Jay, despite the Jeffersonians’ misgivings, secured American trade with British colonies in the West Indies.96 Soon afterwards, Thomas Pickney’s treaty with Spain opened navigation on the Mississippi River.97

By the time Washington published his Farewell Address in the Philadelphia Daily American Advertiser in September 1796, the centrality of the Union in maintaining security was firmly established. “The unity of government,” Washington wrote, “which constitutes you one people is . . . now dear to you.”98 He continued, “It is justly so, for it is a main pillar in the edifice of your real independence, the support of your tranquility at home, your peace abroad; of your safety; of your prosperity; of that very liberty which you so highly prize.”99 Although challenges to the Union would undoubtedly arise, and factions threaten, the Union must be maintained.

Washington urged that in its dealings with foreign nations, the United States be independent, avoiding “permanent, inveterate antipathies against particular nations, and passionate attachments for others.”100 The United States’ energies should point towards strengthening the U.S. economy:

[T]he great rule of conduct for us in regard to foreign nations is in extending our commercial relations, to have with them as little political connection as possible. . . . Europe has a set of primary interests which to us have none; or a
very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities.\textsuperscript{101}

By remaining unified and detached from the internecine warfare marking European relations, the time would come “when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel.”\textsuperscript{102} “\textit{E Pluribus Unum},” added to U.S. coins about the same time as Washington’s \textit{Farewell Address},\textsuperscript{103} captured an important element of U.S. national security: the Union itself (“out of many, one”) resting on the economic strength of the country.

1. International Independence and Economic Growth

Washington’s approach to national security, supported by congressional ratification of treaties and the establishment of key executive-branch departments, continued in successive administrations. Central to maintaining American independence was the ability to protect U.S. commerce and to withstand foreign aggression. Towards this end, in 1798, President John Adams appointed Benjamin Stoddert the first Secretary of the Navy, adding another critical post to the federal institutional design.\textsuperscript{104}

The challenges faced by Stoddert’s new department were substantial: The Continental Navy had been disbanded after the Revolutionary War.\textsuperscript{105} Article II of the Constitution, though, authorized Congress to provide and maintain naval forces,\textsuperscript{106} leading to the reconstitution of the Navy in 1794,\textsuperscript{107}—a time in which Barbary Coast corsairs threatened U.S. commerce in the Mediterranean.\textsuperscript{108} Respond-
ing to the failure of U.S.-French negotiations in the so-called “Quasi-War” against the corsairs, 109 Congress expanded the Navy’s role by passing a series of bills to enlarge the fleet, culminating in a 1798 statute that established the Department of the Navy. 110 Any ambition to build a U.S. battle fleet, however, seemed doomed by the 1800 election of President Thomas Jefferson, who came to office determined to reduce federal expenses. 111 Jefferson’s expected efforts to limit naval power faltered, however, in the face of growing tension with the corsairs and a crisis with Tripoli. 112 Because the United States’ international stature was at stake, Jefferson directed the Navy to assume a more aggressive posture, blockading and bombarding Tripoli and supporting the march of land forces intent on forcing the dey of Tripoli from his throne. 113 The Federalist Adams Administration and the Republican Jefferson Administration thus adopted an approach commensurate with Washington’s course regarding U.S. national security: use of force abroad in defense of U.S. commercial interests—not in support of allied countries embroiled in conflict. The aim was to obtain international independence.

As a domestic matter, Adams’s Federalists, amidst heightened tensions with France, became increasingly alarmed that domestic sympathies for the French revolutionaries could potentially destroy the Union. 114 Accordingly, in 1798, Congress passed four bills that came to be known as the Alien and Sedition Acts. 115 The Alien Act authorized the President to deport any noncitizen considered “dangerous to the peace and safety of the United States.” 116 The Sedition Act took it one step further, seeing in factionalism and malcontent the seeds of disaster. 117 Professor Geoffrey Stone carefully discusses this legislation as a historical matter and in relation to the First Amendment. 118 To the extent that the legislation was more than just a political tool to undermine the Democratic-Republican Party, it

corsairs of North Africa’s Barbary Coast.’’); Palmer, supra note 105 (‘‘Two years after the end of the war, the money-poor Congress sold off the last ship of the Continental navy, the frigate Alliance.’’). The first forty-four-gun frigates to be built, the largest ships in the U.S. fleet, were to be called the Constitution, the United States, and the President—apropos of the United States’ underlying national security concerns. Palmer, supra note 105.

109. The failure of the French negotiations rested in part on the so-called “XYZ Affair,” in which three unnamed agents demanded $10 million from the Americans before the French government would negotiate. See Palmer, supra note 105.

111. Palmer, supra note 105 (“Stoddert’s hopes of building a U.S. battle fleet were doomed by the election of President Thomas Jefferson in 1800 . . . .”).

also can be considered a response to a deep, underlying national security concern: the potential threat that the French experiment presented to the bonds of the Union.  

Throughout this time, establishing control over the physical territory of the United States proved equally central to protecting the political institution of government. A strong foreign presence at the nation’s borders presented a threat: France (and Spain, for that matter) had the power to block U.S. trade at the port of New Orleans, which would have crippled commercial intercourse west of the Appalachians. Napoleon’s decision to secure New Orleans in 1801 raised further concern, not just about attack, but about the potential for abolitionists to free slaves in the territory, thus prompting rebellion across the southern United States. President Jefferson responded by forcing through the Louisiana Purchase, despite his own constitutional misgivings and strong domestic opposition. National security was the overriding interest.

Battles along the frontier continued. Britain could ill afford further encroachment into its North American trade. It thus allied with a number of Native American tribes to resist American expansionism. But the United States had different designs: William Henry Harrison, serving as Governor of the Indiana Territory under Jefferson’s direction, sought to take title to Native American lands. He executed numerous treaties, in the process of which he secured

125. Id.
126. Id. at 80 (“Mr. Jefferson appointed Governor Harrison, sole commissioner for treating with the Indians. Here his time was wholly occupied and he and the disbursement of large sums of money, appropriated by Congress for annuities to the tribes and for purchasing lands. He conducted this trust with great discreetness, and acquired an uncommon influence over the Indians.”).
millions of acres for the United States.\footnote{127} In concert with its support for Native American tribes, Britain began impressing American sailors into service on the high seas\footnote{128}—an action at once disdainful and harmful to the United States’ international standing.\footnote{129} Great Britain also prosecuted its war with France, in part, by placing restrictions on U.S. commercial vessels.\footnote{130} The standoff regarding the British orders in council, which declared U.S. trade with France to be an act of war, pushed the United States towards active combat.\footnote{131}

Driven by establishing the country’s international independence and developing its economic strength, the decision to go to war was commensurate with the nation’s primary and secondary national security interests.\footnote{132} Those pressing for a military response came mostly from the West and South—which were expansionist in design, committed to the country’s economic interests, and already con-

\footnotesize{127. Id. (“His administration is declared to have been nearly a succession of treaties, by one of which he secured to the United States fifty one millions of acres of the richest country in the west, and the most valuable mineral region in the Union.”). His actions met with resistance. See id. at 149–67, 237–39 (describing the so-called “Indian Wars”); see also Ct. of Mil. History, U.S. Army Campaigns: Indian Wars, U.S. Army, http://www.history.army.mil/html/reference/army_flag/iw.html (last updated Nov. 19, 2010) [hereinafter Indian Wars]. In 1811, for instance, he fought a Confederate of British-backed tribes at Tippecanoe, near Indianapolis. See BURR, supra note 123, at 149–67, 237–39; see also Indian Wars, supra (“In 1804[,] Tecumseh, a Shawnee, and his medicine man brother, the Prophet, with British backing, began serious efforts to form a new Indian confederacy in the Northwest.”). They allied, for instance, with the Upper Creeks in another campaign that centered on the question of American expansion. See id. (“[The Tippecanoe] victory did not solve the Indian problems in the Northwest. The tribes of the area were to make common cause with the British in the War of 1812.”). Note that Britain later supported the Seminole during the First Seminole War. Id.

129. This fact was not lost on the British. See ADAMS, supra note 128, at 963–64. The British newspaper, The Morning Post, for instance, opined, “though the British Government . . . may, however irritated by her conduct, display magnanimous forbearance toward so insignificant a Power as America, they will not . . . suffer our proud sovereignty of the ocean to be mutilated by any invasion of its just rights and prerogatives. . . . [T]he sovereignty of the seas in the hands of Great Britain is an established, legitimate sovereignty.” Id. The paper also wrote, “A few short months of war would convince these desperate politicians of the folly of measuring the strength of a rising, but still infant and puny, nation with the colossal power of the British empire.” Id. at 964.

130. Cf. SIR ROBERT PHILLMORE, 3 COMMENTARIES UPON INTERNATIONAL LAW 211 (2d ed. 1857) (opining that the British restrictions on U.S. trade violated international law: “In [the order to engage in retaliatory measures against French allies or any state that had submitted to Napoleon’s restrictions] the British Government, in their turn, enunciated a proposition false in fact, and bad in law. It may be some palliation that the measure was retaliatory, but it is not, according to the rules of eternal right and justice, a defence [sic]. The truth is, that France was the first wrong-doer—Great Britain the second.”).}

132. Note that the so-called “neutral rights” violations were actually lifted before the war started, but word of the reprieve did not reach American shores before a formal declaration of war.}
cerned about the alliances between Britain and the Native Americans. Despite opposition, the declaration of war against England passed both the House and the Senate. While the Treaty of Ghent, which brought the conflict to a close in December 1814, meant agreement on status quo ante bellum, Jackson’s defeat of the British at the Battle of New Orleans and the fact that the United States had proven willing to militarily protect its commercial interests went some way towards establishing the United States as a force in the international environment.

Commensurate with this experience and the country’s twin national security aims, President James Madison’s Second Inaugural Address reflected on the importance of being able to protect U.S. citizens abroad:

On the issue of the war are staked our national sovereignty on the high seas and the security of an important class of citizens, whose occupations give the proper value to those of every other class. Not to contend for such a stake is to surrender our equality with other powers on the element common to all and to violate the sacred title which every member of the society has to its protection. I need not call into view the unlawfulness of the practice by which our mariners are forced at the will of every cruising officer from their own vessels into foreign ones, nor paint the outrages inseparable from it.

133. 12TH CONG., H.R. JOURNAL (1812) (recounting votes of those opposed as representing regions in the South and West).
134. 24 ANNALS OF CONG. 755 (1812) (Declaration of War between Great Britain and the United States).
137. President James Madison, Second Inaugural Address (Mar. 4, 1813), in INAUGURAL ADDRESSES, supra note 20, at 30. In articulating the basic precepts of U.S. national security over time, I draw, inter alia, from the inaugural addresses of successive Presidents. These statements often reflect the prevailing threats of the times as well as each administration’s intended course of action. As President Rutherford B. Hayes acknowledged in his own address, the purpose of the speech is “to announce some of the leading principles, on the subjects that now chiefly engage the public attention, by which it is my desire to be guided in the discharge of those duties.” President Rutherford B. Hayes, Inaugural Address (Mar. 5, 1877), in INAUGURAL ADDRESSES, supra note 20, at 153–59. Hayes spoke specifically to “the motives which should animate us, and to suggest certain important ends to be attained in accordance with our institutions and essential to the welfare of our country.” Id. As President William Taft explained, “The office of an inaugural address is to give a summary outline of the main policies of the new administration, so far as they can be anticipated.” President William Taft, Inaugural Address (Mar. 4, 1909), in INAUGURAL ADDRESSES, supra note 20, at 213–26. As President Herbert Hoover expressed, the inaugural provides the President with the opportunity to “express simply and directly the opinions [held] concerning some of the matters of present importance.” President Herbert Hoover, Inaugural Address (Mar. 4, 1929), in INAUGURAL ADDRESSES, supra note 20, at 257–68. National security routinely figures largely in the inaugural addresses—not least, perhaps, because the speech follows upon the public taking of an oath, signifying a mutual and public covenant to protect the country and the Constitution. President Benjamin Harrison explained:

The officer covenants to serve the whole body of the people by a faithful execution of the laws, so that they may be the unfailing defense and security of those who respect and observe them, and that neither wealth, station, nor the power of combinations shall be able to evade their just
According to Madison, England had failed to abide by the laws of war.\textsuperscript{138} The United States, however, had acted in accordance with the precepts of international law, reflecting its status as a “civilized nation.”\textsuperscript{139}

By cementing a stronger centralized government, procuring more money for the military, and securing a stronger role for the federal government in developing the nation’s infrastructure, the war was a victory for the Federalists. Nevertheless, it helped to destroy the Federalist Party. Democratic-Republican President James Monroe came to office in a landslide election, defeating Rufus King by an electoral college vote of 183 to 34 in 1816, and securing a second term by defeating John Quincy Adams by a vote of 231 to 1 in 1820.\textsuperscript{140}

During his First Inaugural Address, national security concerns were uppermost in Monroe’s mind.\textsuperscript{141} Mere distance from Europe had proven insufficient to establish American independence; U.S. trade required protection.\textsuperscript{142} To do this, Monroe concluded that a strong military must be maintained:

To secure us against these dangers our coast and inland frontiers should be fortified, our Army and Navy, regulated upon just principles as to the force of each, be kept in perfect order, and our militia be placed on the best practicable footing. To put our extensive coast in such a state of defense as to secure our penalties or to wrest them from a beneficent public purpose to serve the ends of cruelty or selfishness.

President Benjamin Harrison, Inaugural Address (Mar. 4, 1889), in \textit{Inaugural Addresses}, \textit{supra} note 20, at 79–98. Thus, while the addresses are by no means exclusive, they are at least probative of the central issues being faced and the manner in which each successive administration seeks to respond. I thus use them in concert with other historical documents, to chart the evolution of the United States’ approach to its national security.

139. \textit{Id.} at 29–31 (“As the war was just in its origin and necessary and noble in its objects, we can reflect with a proud satisfaction that in carrying it on no principle of justice or honor, no usage of civilized nations, no precept of courtesy or humanity, have been infringed. The war has been waged on our part with scrupulous regard to all these obligations, and in a spirit of liberality which was never surpassed. How little has been the effect of this example on the conduct of the enemy! They have retained as prisoners of war citizens of the United States not liable to be so considered under the usages of war. They have refused to consider as prisoners of war, and threatened to punish as traitors and deserters, persons emigrating without restraint to the United States . . . .”).

141. \textit{See} President James Monroe, First Inaugural Address (Mar. 4, 1817) [hereinafter Monroe, First Inaugural Address], in \textit{Inaugural Addresses}, \textit{supra} note 20, at 33–41 (“Dangers from abroad are not less deserving of attention. Experienced the fortune of other nations, the United States may be again involved in war, and it may in that event be the object of the adverse party to overset our Government, to break our Union, and demolish us as a nation. Our distance from Europe and the just, moderate, and pacific policy of our Government may form some security against these dangers, but they ought to be anticipated and guarded against. Many of our citizens are engaged in commerce and navigation, and all of them are in a certain degree dependent on their prosperous state. Many are engaged in the fisheries. These interests are exposed to invasion in the wars between other powers, and we should disregard the faithful admonition of experience if we did not expect it. We must support our rights or lose our character, and with it, perhaps, our liberties. A people who fail to do it can scarcely be said to hold a place among independent nations. National honor is national property of the highest value. The sentiment in the mind of every citizen is national strength. It ought therefore to be cherished.”).

142. \textit{See} id.
cities and interior from invasion will be attended with expense, but the work when finished will be permanent, and it is fair to presume that a single campaign of invasion by a naval force superior to our own, aided by a few thousand land troops, would expose us to greater expense, without taking into the estimate the loss of property and distress of our citizens, than would be sufficient for this great work. Our land and naval forces should be moderate, but adequate to the necessary purposes—the former to garrison and preserve our fortifications and to meet the first invasions of a foreign foe, and, while constituting the elements of a greater force, to preserve the science as well as all the necessary implements of war in a state to be brought into activity in the event of war; the latter, retained within the limits proper in a state of peace, might aid in maintaining the neutrality of the United States with dignity in the wars of other powers and in saving the property of their citizens from spoliation. In time of war, with the enlargement of which the great naval resources of the country render it susceptible, and which should be duly fostered in time of peace, it would contribute essentially, both as an auxiliary of defense and as a powerful engine of annoyance, to diminish the calamities of war and to bring the war to a speedy and honorable termination.  

The key to a strong military was the ability to expand the resources available to the government to meet any emergency that might arise. 

Under Monroe’s guidance, the physical territory of the country expanded, in turn enabling economic growth. In 1819, Spain ceded Florida to the United States in return for the cancellation of $5 million in Spanish debt. New states came into existence: in 1820, Maine entered statehood, followed by Missouri in 1821. As the territory expanded, the question of slavery threatened to divide the Union—triggering the fundamental security interest of the country. The Missouri Compromise, forbidding slavery above 36°30’, subsequently found support both north and south of the demarcation, carrying Monroe to an easy victory for his second term.

In 1823, Monroe articulated his view of U.S. international interests, pointing out

143. Id. at 37–38.
144. Id. at 39 (“The great amount of our revenue and the flourishing state of the Treasury are a full proof of the competency of the national resources for any emergency, as they are of the willingness of our fellow-citizens to bear the burdens which the public necessities require.”).
147. Monroe received 231 electoral votes to John Quincy Adams’s 1 vote in the 1820 elections. James Monroe, supra note 140; see generally ROBERT PIERCE FORBES, THE MISSOURI COMPROMISE AND ITS AFTERMATH: SLAVERY AND THE MEANING OF AMERICA (2007) (describing the sobriety engendered by the near loss of Union and the consequent relief that greeted the Missouri Compromise).
that the United States had steadfastly avoided engaging in European wars.\textsuperscript{148} The key issue for American engagement was intensely personal and rested on self-defense: “It is only when our rights are invaded,” Monroe stated, “or seriously menaced that we resent injuries or make preparation for our defense.”\textsuperscript{149} Monroe went on to suggest that the United States had a more immediate interest in the Western Hemisphere.\textsuperscript{150} Thus, according to Monroe, the country would engage in matters of economic importance overseas, but refuse to be drawn into the European battles that ravaged the Continent.\textsuperscript{151} In South America, however, from which European powers had begun to retreat, the United States would countenance no renewed colonization.\textsuperscript{152} Here, the United States asserted a defensive right to respond to European aggression, when it felt its national interests threatened:

\begin{quote}
We owe it . . . to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the Governments who have declared their independence and maintain it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny, by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States.\textsuperscript{153}
\end{quote}

The Monroe Doctrine ensured that the United States could act internationally free from European restrictions. It was a way of keeping the politics of Europe out of the Americas and thus leaving the United States free to pursue its regional interests.

American international independence also found root in President John Quincy Adams’s articulation of U.S. interests. Military strength, subordinate to civil interests, provided the key.\textsuperscript{154} In Adams’s \textit{Inaugural Address}, he explained,

\begin{quote}
Our political creed is . . . that the firmest security of peace is the preparation during peace of the defenses of war . . . that the military should be kept in strict subordination to the civil power . . . that the policy of our country is peace and

the ark of our salvation union are articles of faith upon which we are all now agreed.\textsuperscript{155}

Washington’s policies had proven critical for U.S. national security. His admonition against entanglements abroad rung as important in 1825 as they had some thirty years prior: “If there have been dangerous attachments to one foreign nation and antipathies against another, they have been extinguished. Ten years of peace, at home and abroad, have assuaged the animosities of political contention and blended into harmony the most discordant elements of public opinion.”\textsuperscript{156}

President Andrew Jackson’s tenure in office reflected a similar course. For the first (and only) time in U.S. history, the national government was relieved of all debt.\textsuperscript{157} The shadow of the Revolutionary War thus dissipated, attention could turn to building the economic engine on which future growth hinged. Jackson vigorously advanced the interests of Georgia, Alabama, and Mississippi in expanding their agricultural base by removing the Cherokee, Choctaw, Chickasaw, and Creek tribes living in their midst.\textsuperscript{158} Congress acquiesced to this policy.\textsuperscript{159} The Indian Removal Act of 1830 authorized the President to transfer lands west of the Mississippi (areas in what is now Oklahoma and Arkansas) to the tribes in exchange for lands within existing state borders.\textsuperscript{160}

The importance of unity continued to thread its way through U.S. national security concerns. The Nullification Crisis of 1828–1832 raised the specter of Southern discontent.\textsuperscript{161} Tariffs on European goods were raised by the national government and, on the heels of that, the South, led by Southern President John C. Calhoun, sought to nullify national tariffs. The dispute came to a head with the so-called Tariff of Abominations, a high tariff that was passed in 1828, which led to a series of confrontations, including the Nullification Crisis of 1828–1832. The crisis was a serious test of the Union and its commitment to national union. The issue was eventually resolved through the Compromise of 1833, which included the publication of the famous “Correspondence on the Kentucky and Virginia Resolutions,” known as the “Calhoun–Crawford Correspondence.”

Am. Rev., Oct. 1830, at 396–442, available at http://digital.library.cornell.edu/cgi/t/text/pageviewer-idx?c=nora;cc=nora;rgn=full%20text;idno=nora0031-2;didno=nora0031-2;view=image;seq=00404;node=nora0031-2%3A1. The Treaty of New Echota, for instance, granted the Cherokee Nation land in what is now Oklahoma, as well as $5 million in compensation for property and relocation expenses in exchange for their lands. Treaty with the Cherokee (Treaty of New Echota), Dec. 29, 1835, 7 Stat. 478, reprinted in 2 INDIAN AFFAIRS: LAWS AND TREATIES, TREATIES (Charles J. Kappler ed., 1904), available at http://digital.library.okstate.edu/kappler/Vol2/treaties/che0439.htm. The United States also promised respect for their political autonomy in future. Id. The Treaty, however, which was not sanctioned by the Cherokee national government, passed the U.S. Senate by only one vote. Id. When a number of Cherokees subsequently refused to relocate, the U.S. Army was brought in to force them to walk what has come to be known as the Trail of Tears, during which between four and five thousand Cherokees died. See generally TIM ALAN GARRISON, THE LEGAL IDEOLOGY OF REMOVAL: THE SOUTHERN JUDICIARY AND THE SOVEREIGNTY OF NATIVE AMERICAN NATIONS (2002); THE CHEROKEE REMOVAL: A BRIEF HISTORY WITH DOCUMENTS (Theda Perdue & Michael D. Green eds., 1995).
government in a manner that made them more expensive than Northern wares—leading to charges of extortion.\textsuperscript{162} South Carolina protested that Congress had exceeded its constitutional authority.\textsuperscript{163} A second statute followed in 1832.\textsuperscript{164} Seen as a case of too little, too late, in November 1832, a South Carolina state convention declared both statutes void.\textsuperscript{165} The following month, President Jackson responded with a proclamation, disputing South Carolina’s constitutional right to nullify a federal law.\textsuperscript{166} Congress supported Jackson’s assertion, passing in March 1833 an Act to authorize the President to use force to uphold federal tariffs.\textsuperscript{167} As South Carolina prepared for military confrontation, Henry Clay managed to negotiate a compromise bill, which ended the standoff.\textsuperscript{168} The incident proved critical in the march to Civil War, but for the moment, national unity was preserved.

In 1837, President Martin Van Buren came to office determined to continue the course set by Washington during the first epoch. Van Buren’s opposition to an overly strong military found counterpoise in the need to be able to defend the country against potential foreign aggression. Van Buren commented,

\begin{quote}
We may not possess, as we should not desire to possess, the extended and ever-ready military organization of other nations; we may occasionally suffer in the outset for the want of it; but among ourselves all doubt upon this great point has ceased, while a salutary experience will prevent a contrary opinion from inviting aggression from abroad.\textsuperscript{169}

He articulated the importance of avoiding entangling alliances while pursuing America’s economic interests abroad. The legacy was clear:

Our course of foreign policy has been so uniform and intelligible as to constitute a rule of Executive conduct which leaves little to my discretion, unless, indeed, I was willing to run counter to the lights of experience and the known opinions of my constituents. We sedulously cultivate the friendship of all nations as the conditions most compatible with our welfare and the principles of our Government. We decline alliances as adverse to our peace. We desire commercial relations on equal terms, being ever willing to give a fair equivalent for advantages received. We endeavor to conduct our intercourse with openness and sincerity, promptly avowing our objects and seeking to establish that mutual frankness which is as beneficial in the dealings of nations as of men. We have no disposition and we disclaim all right to meddle in disputes, whether internal or foreign, that may molest other countries, regarding them in their actual state as social communities, and preserving a strict neutrality in all their controversies. Well knowing the tried valor of our people and our exhaustless resources, we neither anticipate nor fear any designed aggression; and in the consciousness of our own just conduct we feel a security that we shall never be called upon to exert our determination never to permit an invasion of our rights without punishment or redress.

It was for the federal government to maintain a national perspective and to pursue the country’s interests in establishing the United States as an independent player on the world stage. It thus fell to state governments to protect and develop local interests and individual welfare. To the extent that federal initiatives influenced local interests, it was in the interests of the nation as a whole. The extension of U.S. territory had opened up “[n]ew and inexhaustible sources of general prosperity . . . .”

Nonetheless, two areas pursued by the national government had a strong local impact: The first was the continued removal of the Native Americans—particularly, the Cherokee—in the process begun under Andrew Jackson. The second was the issue of abolition. Van Buren had come to office amidst mounting friction over the institution of slavery, which he saw as threatening both the Union

170. See id. at 77.

172. See id.
173. See id.
174. See id. at 74. (“While the Federal Government has successfully performed its appropriate functions in relation to foreign affairs and concerns evidently national, that of every State has remarkably improved in protecting and developing local interests and individual welfare; and if the vibrations of authority have occasionally tended too much toward one or the other, it is unquestionably certain that the ultimate operation of the entire system has been to strengthen all the existing institutions and to elevate our whole country in prosperity and renown.”).
175. Id.
and the Constitution. His successor, William Henry Harrison, subsequently reiterated the importance of Union: “Our Confederacy, fellow-citizens, can only be preserved by the same forbearance” that marked the Helvetic Confederacy.

The institution of slavery carried not just domestic consequences, but international ones as well. Accordingly, President John Tyler, assuming office within a month of Harrison’s inauguration, turned the United States’ gaze outward. Trade, once again, provided a focus. In response to Great Britain’s detention of U.S. vessels in the African seas, Tyler informed Congress: “Our commercial interests in that region have experienced considerable increase and have become an object of much importance, and it is the duty of this Government to protect them against all improper and vexatious interruption.” For Tyler, the fact that such vessels were engaged in the trafficking of human beings, regardless of British or Northern sentiments on the matter, was of little import to the question of American independence: “However desirous the United States may be for the suppression of the slave trade, they can not consent to interpolations into the maritime code at the mere will and pleasure of other governments.” In order to protect U.S. interests, more resources would have to flow to the Navy. The question was not one of

176. See, e.g., MARTIN VAN BUREN, THE AUTOBIOGRAPHY OF MARTIN VAN BUREN 132–38 (noting that following the Revolution, “The spread of slavery and the increase of slave States was a source and the only source from which trouble was apprehended . . . ”; yet objecting to the more recent efforts of abolitionists to challenge the South: “Disguise the matter as we may such agitation must, in light of reason and justice, be regarded as alike offensive to the spirit and derogatory to the memories of the Revolution.”); see also EDWARD L. WIDMER, MARTIN VAN BUREN 115–22 (providing a somewhat cynical reading of Van Buren’s refusal to take a strong stand on the issue, tying it to political self-interest as well as the fractious nature of the issue for the Union).

177. President William Henry Harrison, Inaugural Address (Mar. 4, 1841), in INAUGURAL ADDRESSES, supra note 20, at 92.

180. Id.

181. In 1807, the Slave Trade Act, 47 Geo. 3, c. 36 abolished slave trade in the British Empire; in 1833, the Slavery Abolition Act, 3 & 4 Will. 4, c. 73 abolished slavery itself.

182. Tyler, supra note 179. Tyler continued:

American citizens prosecuting a lawful commerce in the African seas under the flag of their country are not responsible for the abuse or unlawful use of that flag by others; nor can they rightfully on account of any such alleged abuses be interrupted, molested, or detained while on the ocean, and if thus molested and detained while pursuing honest voyages in the usual way and violating no law themselves they are unquestionably entitled to indemnity . . . . This Government will not cease to urge upon that of Great Britain full and ample remuneration for all losses, whether arising from detention or otherwise, to which American citizens have heretofore been or may hereafter be subjected by the exercise of rights which this Government can not recognize as legitimate and proper.

Id.

183. Id. (“The report of the Secretary of the Navy will place you in possession of the present condition of that important arm of the national defense. Every effort will be made to add to its efficiency, and I can not too strongly
aggression against other nations; it was one of being able to defend U.S. commercial interests:

We look to no foreign conquests, nor do we propose to enter into competition with any other nation for supremacy on the ocean; but it is due not only to the honor but to the security of the people of the United States that no nation should be permitted to invade our waters at pleasure and subject our towns and villages to conflagration or pillage.\textsuperscript{184}

The request for appropriations was not lightly made; the United States needed money to shore up its national security.\textsuperscript{185}

Commercial opportunity arose not just in Europe and Africa, but also in Asia. It was during Tyler’s tenure that the United States signed its first treaty with China, paving the way for trade with the East.\textsuperscript{186} The Treaty of Wanghia, named after the village in which the treaty was signed, extended most-favored nation status to the United States, putting the country on par with the benefits granted to other major powers, such as Great Britain.\textsuperscript{187}

Domestically, the country’s expansion continued. In 1845, Tyler proved willing to go to war with Mexico to obtain Texas.\textsuperscript{188} James Knox Polk, who became President in March of 1845, explained that the country’s policy of expansion was central to its national security: “As our population has expanded, the Union has been cemented and strengthened. As our boundaries have been enlarged and our agricultural population has been spread over a large surface, our federative system has acquired additional strength and security.”\textsuperscript{189} The following year, the United States settled its dispute with Britain over the Oregon Territory, expanding further

\textsuperscript{184.} Id.
\textsuperscript{185.} Id. (“Economy in all branches of the public service is due from all the public agents to the people, but parsimony alone would suggest the withholding of the necessary means for the protection of our domestic firesides from invasion and our national honor from disgrace. I would most earnestly recommend to Congress to abstain from all appropriations for objects not absolutely necessary; but I take upon myself, without a moment of hesitancy, all the responsibility of recommending the increase and prompt equipment of that gallant Navy which has lighted up every sea with its victories and spread an imperishable glory over the country.”).

west. And in 1848, the Treaty of Guadalupe Hidalgo, which ended the Mexican-American War, gave the United States control over what would become California, New Mexico, Arizona, Nevada, Utah, Wyoming, and parts of Colorado.

Polk’s position that the land at issue in the Mexican-American War belonged to the United States, and that the war itself had broad support domestically, did not go without controversy. Abraham Lincoln spoke at length in the House of Representatives against further appropriations for the war effort on the grounds that the controversy in question was based on a false claim, and that the House had, despite President Polk’s statements to the contrary, divided on the issue. One of the reasons the war proved divisive was that it brought two fundamental tenets of U.S. policy into conflict: reluctance to engage offensively in international wars on one hand, and on the other, the desire to expand and build the country’s economic strength. The discovery of gold in California in 1848 did little to diminish the strength of the latter interest.

President Zachary Taylor came to office in 1849 determined to continue course set by Washington and adopted by his predecessors. “As American freemen,” he stated, “we can not but sympathize in all efforts to extend the blessings of civil and political liberty, but at the same time we are warned by the admonitions of history and the voice of our own beloved Washington to abstain from entangling alliances with foreign nations.” Taylor emphasized that neutrality must be maintained, even as the United States sought to engage other countries to bolster trade and to avoid foreign aggression:

In all disputes between conflicting governments it is our interest not less than our duty to remain strictly neutral, while our geographical position, the genius of our institutions and our people, the advancing spirit of civilization, and, above all, the dictates of religion direct us to the cultivation of peaceful and friendly relations with all other powers. It is to be hoped that no international question can now arise which a government confident in its own strength and resolved to protect its own just rights may not settle by wise negotiation; and it

192. Abraham Lincoln, Speech Against Mexican War (Jan. 12, 1848), in THE COLLECTED WORKS OF ABRAHAM LINCOLN 26–27 (Roy P. Basler ed., 1974) (“When the war began, it was my opinion that all those who, because of knowing too little, or because of knowing too much, could not conscientiously approve the conduct of the President, in the beginning of it, should, nevertheless, as good citizens and patriots, remain silent on that point, at least till the war should be ended. . . . [But upon examination I formed] the impression, that taking for true, all the President states as facts, he falls far short of proving his justification; and that the President would have gone farther with his proof, if it had not been for the small matter, that the truth would not permit him.”).
eminently becomes a government like our own, founded on the morality and intelligence of its citizens and upheld by their affections, to exhaust every resort of honorable diplomacy before appealing to arms.\footnote{194}

Taylor believed it was in the interests of U.S. national security to continue this course.\footnote{195} The Clayton-Bulwer Treaty, signed in 1850, ensured that future canal access through Central America would be open to international trade.\footnote{196}

After President Taylor’s death partway through his term, his Vice President, Millard Fillmore, succeeded him, centering U.S. foreign policy on the rights that each country possessed in the international arena. To Fillmore, such rights placed a duty on other countries.\footnote{197} “Nations,” he stated, “like individuals in a state of nature, are equal and independent, possessing certain rights and owing certain duties to each other, arising from their necessary and unavoidable relations; which rights and duties there is no common human authority to protect and enforce.”\footnote{198} Nevertheless, such rights and duties were binding in morals, conscience, and honor—despite the absence of an international tribunal to which an injured party could appeal.\footnote{199} For Fillmore, the right of self-government strengthened the United States’ decision not to become embroiled in other States’ conflicts:

To maintain a strict neutrality in foreign wars, to cultivate friendly relations, to reciprocate every noble and generous act, and to perform punctually and scrupulously every treaty obligation—these are the duties which we owe to other states, and by the performance of which we best entitle ourselves to like treatment from them; or, if that, in any case, be refused, we can enforce our own rights with justice and a clear conscience.\footnote{200}

Commerce would remain central to U.S. interests abroad; for this reason, the Navy would have to obtain further resources to protect U.S. trade along the Pacific Coast.\footnote{201}

Upon coming to office, President Franklin Pierce reiterated the same policies. He proclaimed in his Inaugural Address, “Of the complicated European systems of
national polity we have heretofore been independent. From their wars, their tumults, and anxieties we have been, happily, almost entirely exempt.”

Still, commercial interests beckoned; Pierce continued, “But the vast interests of commerce are common to all mankind, and the advantages of trade and international intercourse must always present a noble field for the moral influence of a great people.” Under Pierce, the United States would begin to focus on trade with the East, and go on to sign a historical trade agreement with Japan.

The physical expansion of the country remained central to the United States’ economic growth. Pierce explained:

> With an experience thus suggestive and cheering, the policy of my Administration will not be controlled by any timid forebodings of evil from expansion. Indeed, it is not to be disguised that our attitude as a nation and our position on the globe render the acquisition of certain possessions not within our jurisdiction eminently important for our protection, if not in the future essential for the preservation of the rights of commerce and the peace of the world.

Pierce’s actions in office reflected his rhetoric. The Gadsden Purchase, for instance, also known as the Treaty of La Mesilla, soon clarified the southern border with Mexico, in the process adding nearly 30,000 square miles to the United States in southern Arizona and New Mexico. The Caribbean similarly became subject to efforts by the United States to extend its reach; a failed effort to purchase Cuba from Spain was followed by the acquisition of a series of uninhabited islands: Navassa Island in the Caribbean Sea, Baker Island in the central Pacific, and the Johnston Atoll in the North Pacific. Such expansionism was essential to U.S. national security: “Should [new possessions] be obtained,” Pierce had asserted

---

205. Pierce, supra note 20.
207. For thoughtful discussion of the failure of the United States to obtain Cuba from Spain through diplomatic channels, see generally AMOS ASCHBACH ETTLINGER, THE MISSION TO SPAIN OF PIERRE SOULE, 1853–1855: A STUDY IN THE CUBAN DIPLOMACY OF THE UNITED STATES (1932). Navassa Island, Baker Island, and the Johnston Atoll, were all claimed under the terms of the Guano Islands Act, Aug. 18, 1856, 11 Stat. 119, ch. 164, § 1 (codified at 48 U.S.C. §§ 1411–19), which provides in pertinent part:

> Whenever any citizen of the United States discovers a deposit of guano on any island, rock, or key, not within the lawful jurisdiction of any other government, and not occupied by the citizens of any other government, and takes peaceable possession thereof, and occupies the same, such island, rock, or key may, at the discretion of the President, be considered as appertaining to the United States.

On November 18, 1857, an American sea captain, Peter Duncan, claimed Navassa under the Act for the United States. David P. Billington, Jr., Note on the Legal History of Navassa Island, DAVID P. BILLINGTON.NET, http://www.davidpbillington.net/legal.html (last visited Mar. 4, 2012). The Secretary of State replied on December 8, 1859, formally recognizing Navassa Island. Id. For confirmation of the other acquisitions, see U.S.
during his Inaugural Address, “it will be through no grasping spirit, but with a view to obvious national interest and security, and in a manner entirely consistent with the strictest observance of national faith.” 208 In his view, no new threats would thereby develop, as nothing in the country’s history or position would invite aggression: “[W]e have everything to beckon us to the cultivation of relations of peace and amity with all nations. Purposes, therefore, at once just and pacific will be significantly marked in the conduct of our foreign affairs.” 209

But even as the United States engaged in (ostensibly) peaceful expansion within North America, Pierce suggested, the country would reject any efforts by other powers to interfere or colonize the Americas. He reiterated the Monroe Doctrine. 210 For these purposes, and solely for the reasons outlined, the military would be maintained, primarily as a defensive force. 211

Throughout this time, control over U.S. national security lay within the hands of the national government. 212 Any interference with that authority would not be tolerated. Thus, in 1854, Pierce responded forcefully to efforts by U.S. citizens to send a military force to Cuba. 213 At issue was “the national security and the preservation of the public tranquility.” 214 Foreign relations lay exclusively within the power of the national government.

Responsibilities accompanied American expansion; an effective defense must be constructed to protect the country’s shores. Accordingly, upon assuming office in 1854, President James Buchanan drew attention to the military importance of building a road to the West Coast. 215 As a constitutional matter, such powers fell
well within Congress’s authority to declare war, raise and support armies, provide
and maintain a navy, and call forth the militia to repel invasions.216 Such
war-making power entailed a corollary duty to protect each of the states against
invasion:

In the event of a war with a naval power much stronger than our own we should
then have no other available access to the Pacific Coast, because such a power
would instantly close the route across the isthmus of Central America. It is
impossible to conceive that whilst the Constitution has expressly required
Congress to defend all the States it should yet deny to them, by any fair
construction, the only possible means by which one of these States can be
defended. Besides, the Government, ever since its origin, has been in the
constant practice of constructing military roads.217

The ability of the national government to command the allegiance of the western
territories rested, in part, on the ability of the federal government to adequately
perform its duties.218

As for foreign relations, Buchanan would adhere to the course set by Washin-
gton during the first epoch:

In our intercourse with [the great family of nations] there are some plain
principles, approved by our own experience, from which we should never
depart. We ought to cultivate peace, commerce, and friendship with all nations,
and this not merely as the best means of promoting our own material interests,
but in a spirit of Christian benevolence toward our fellow-men, wherever their
lot may be cast. Our diplomacy should be direct and frank, neither seeking to
obtain more nor accepting less than is our due. We ought to cherish a sacred
regard for the independence of all nations, and never attempt to interfere in the
domestic concerns of any unless this shall be imperatively required by the
great law of self-preservation. To avoid entangling alliances has been a maxim
of our policy ever since the days of Washington, and its wisdom’s no one will
attempt to dispute.219

The key to U.S. national security during this time was international independence
for the United States. Constructive engagement on matters of diplomacy would
help to prevent foreign aggression, while steadfastly refusing to become drawn
into European conflicts would ensure the country’s self-preservation. Simultane-

forth the militia).
217. Buchanan, supra note 215, at 130.
218. Id. at 130–31 (“It might also be wise to consider whether the love for the Union which now animates our
fellow-citizens on the Pacific Coast may not be impaired by our neglect or refusal to provide for them, in their
remote and isolated condition, the only means by which the power of the States on this side of the Rocky
Mountains can reach them in sufficient time to ‘protect’ them ‘against invasion.’”).
219. Id.
ously, physical expansion and building stronger commercial ties would help strengthen the economic underpinnings of the country, contributing to American power. Union was a prerequisite to all that followed.

2. Retreat to Union

Abolition continued to mount the national stage. The Union—the very purpose for which the national government was created—came under increasing pressure. Coming off the Compromise of 1850, the uneasy relationship between the North and South threatened to cause a permanent split. Pierce reflected on the threat that had been posed to “national security”:

We have been carried in safety through a perilous crisis. Wise counsels, like those which gave us the Constitution, prevailed to uphold it. Let the period be remembered as an admonition, and not as an encouragement, in any section of the Union, to make experiments where experiments are fraught with such fearful hazard.  

In parallel with the emphasis on Union, national fraternity came to be seen as of paramount importance. Hungarian Louis Kossuth, the first foreign statesman invited to the United States to address a joint session of Congress since the Marquis de Lafayette, brought the matter to the fore. Kossuth’s upcoming speech caused no small amount of concern, in light of domestic North-South frictions and Kossuth’s commitment to democratic ideals. He subsequently wrote in the *New York Times*,

[T]he best I can wish for America is, that, whatever be the ultimate issue of the great crisis in the destinies of humanity, the shadows of which are manifestly rising on the horizon . . . the people on the other side of the Atlantic may never again stand in need of assistance from without.

The context of the time was of great import:

Humanity is everywhere in critical throes. I think it clearly indicated that everything is tending towards a speedy consummation of the truth that the principle of national fraternity is more than a philanthropic emotion; *that it is the only true basis of national security*, even for the proudest and most

---

powerful of nations. France, bereft of all the fruits of three successful revolutions, is an instructive illustration of the truth that popular freedom is not secure, even with the most powerful, without community.  

In this articulation, national fraternity intoned integration and unity of purpose and government.

North and South appeared to agree that national fraternity stood in question. What they seemed to disagree about was whence, precisely, the threat to such fraternity derived. In the North, the pursuit of wealth came to be seen as part of the threat. Upon his return to Louisville, the former Secretary of the Treasury, James Guthrie, explained:

It has been said, in reference to individuals, that it is easier to bear the trials of adversity than of prosperity. That which applies to individuals is no less true of nations. . . . Our country has passed through the most trying scenes of adversity; we are now called upon for the first time to withstand the dangerous influences of wealth. It has grown into a proverb that affluence maddens nations; and an overflowing treasury is a temptation to public plunder that everyone may not resist. I pray and hope confidently that the noble old Ship of State will weather the storm which threatens her and ride safely into a secure harbor of national security.

Abolitionists also looked to the South’s refusal to relinquish the practice of slavery, suggesting that it was this intransigence that threatened the Union as a whole. The New York Times carried Reverend Beriah Greene’s references to the “institution” of slavery:

Said he, there exists among us a thing which bears the name of an ‘institution,’ in which all the objects described in the [C]onstitution are ruthlessly trampled underfoot, and divine law utterly repudiated. This ‘institution’ has attained such a commanding prominence as to exercise a controlling national influences [sic]. It has become the institution. It is the existence of this institution which had called the convention together—which had occasioned wide-spread alarm, and the deepest solicitude for our national security.

The South’s failure to relinquish slavery posed a threat. For the abolitionist minority, if national security required an end to slavery, then the failure of the country to embrace abolition meant that it was placing slavery above national security.

227. Id.
228. The Republican Party and Our Relations with Mexico, N.Y. Daily Times, Mar. 29, 1960, at 2 (“The Republican Party is old enough, and has in it the conditions pre-requisite for a foreign as well as domestic policy;
Like Guthrie and Greene, Abraham Lincoln underscored the role that slavery played in threatening the Union and in denying the country national fraternity. Speaking in 1858, he pointed out that approximately five years earlier, a policy had been initiated with the stated aim of ending slavery.\(^\text{229}\) “Under the operation of that policy,” Lincoln asserted, “that agitation has not only not ceased, but has constantly augmented. In my opinion, it will not cease, until a crisis shall have been reached and passed.”\(^\text{230}\) He declared,

“A house divided against itself cannot stand.” I believe this government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved—I do not expect the house to fall—but I do expect it will cease to be divided. It will become all one thing, or all the other.\(^\text{231}\)

Danger dwelt not only in the divisions that tore the country in two, but in the appeals to national security. By making such appeals, the controversy involved more than abolition and the newly acquired territories; it implicated the political structure and the constitutional order. The New York Times thus begged on Thanksgiving Day, 1859:

We shall be astonished to see how little in our lives we truly owe to ourselves, to our own wit or wisdom, or shrewdness or strength, in comparison with the enormous weight of our obligations to the society in which we have dwelt, to the laws and the civilization which have made our efforts possible, and to that sublime overruling Power . . . . It can do us no harm to feel these truths more keenly than ever to-day . . . . The United States sorely need a Thanksgiving Day, that they may measure the tremendous extent of the perils which national success and national vanity, and the insolence of national security, have been preparing for the Republic. Let us silence to-day, for a brief space, the angry pulse of partisan conflict and sectional recriminations; and ask ourselves in all seriousness what the future has in store for us if we continue to act, as for years we have acted, on the theory that nothing can disturb our peace . . . .\(^\text{232}\)

The real risk in succumbing to such partisan politics was the destruction of the nation itself.

Southern views, unsurprisingly, departed from those of the North. They considered Northern aggression the most serious threat to U.S. national security:

---

229. See John Simpson Penman, The Irresistible Movement of Democracy 125 (1923).
231. Id.
Invaded in a moment of profound peace—*startled from their dreams of national security* by the advent of a new Peter the Hermit, preaching an eternal crusade against their domestic order and their notions of public law—the people of the South may lawfully and reasonably demand of the North an open repudiation of practical excesses which every sensible man must admit to be equally incompatible with the honor of the Free States and with the peace of the South.\(^{233}\)

Once again, national security concerns proved paramount—namely, whether the political differences between the North and the South would undermine the underlying precepts of the Union: “No matter what may be the views which one or another Northern man may entertain of Slavery in the abstract,” one Southern supporter wrote, “the bare proposition which assumes a right on the part of any Northern man to march with an armed following at his back from Ohio into Kentucky, or from Pennsylvania into Virginia, on a mission of emancipation, is its own immediate refutation.”\(^{234}\)

Two weeks prior to Lincoln’s inauguration, Jefferson Davis became President of the Confederacy.\(^{235}\) Lincoln, despite his earlier “House Divided” speech, attempted to diffuse Southern concern:

> I . . . consider that in the view of the Constitution and the laws the Union is unbroken, and to the extent of my ability, I shall take care, as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States . . . In doing this there needs to be no bloodshed or violence, and there shall be none unless it be forced upon the national authority. The power confided to me will be used to hold, occupy, and possess the property and places belonging to the government and to collect the duties and imposts; but beyond what may be necessary for these objects, there will be no invasion, no using of force against or among the people anywhere . . . So far as possible the people everywhere shall have that sense of perfect security which is most favorable to calm thought and reflection.\(^{236}\)

Nevertheless, Lincoln displayed an iron fist in a velvet glove: “The course here indicated,” he continued,

> will be followed unless current events and experience shall show a modification or change to be proper, and in every case and exigency my best discretion will be exercised, according to circumstances actually existing and with a view

and a hope of a peaceful solution of the national troubles and the restoration of fraternal sympathies and affections.\footnote{Id. at 137 (emphasis added).}

Fraternalism thus served as the glue that held the Union together. Renouncing the Union left only anarchy and despotism.\footnote{Id. at 138 ("A majority held in restraint by constitutional checks and limitations, and always changing easily with deliberate changes of popular opinions and sentiments, is the only true sovereign of a free people. Whoever rejects it does of necessity fly to anarchy or to despotism.").} Lincoln thus emphasized that the Union must be maintained—signaling a retreat to the core national security interests of the Founding.

Throughout the Civil War, preserving the Union provided an overriding national security interest. “Rally for the union,” one ad called, “The Peace of this Union must be restored. We must have national security and peace.”\footnote{Display Ad 2—No Title, N.Y. DAILY TIMES, 1861, at 5 (“Assembly to support the Union, ‘By order of 50,000 citizens’").} The People had ordered it thus.\footnote{Id.} Protection of the Constitution was therefore a central concern. Accordingly, as President Andrew Johnson took office in 1865, he noted,

The best security for the perpetual existence of the States is the “supreme authority” of the Constitution of the United States. The perpetuity of the Constitution brings with it the perpetuity of the States; their mutual relation makes us what we are, and in our political system their connection is indissoluble. The whole can not exist without the parts, nor the parts without the whole. \textit{So long as the Constitution of the United States endures, the States will endure. The destruction of the one is the destruction of the other; the preservation of the one is the preservation of the other.}\footnote{President Andrew Johnson, First Annual Message (Dec. 4, 1865) [hereinafter Andrew Johnson, First Annual Message], available at http://www.presidency.ucsb.edu/ws/index.php?pid=29506#axzz1Wo2idoeG (emphasis added).} The Civil War would serve to preserve the Constitution.

Following the war, the question of what to do with the territory within the limits of the Confederate States immediately presented itself.\footnote{See id. ("Whether the territory within the limit of [Confederate] States should be held as conquered territory, under military authority emanating from the President as the head of the Army, was the first question that presented itself for decision.").} The land could be held under military authority, as derived from the President’s commander-in-chief authorities.\footnote{Id.} But strict military rule offered little by way of security.\footnote{See id. ("The willful use of such powers, if continued through a period of years, would have endangered the purity of the general administration and the liberties of the States which remained loyal.").} Such an arrangement, according to Andrew Johnson, “would have divided the people into the vanquishers and the vanquished, and would have envenomed hatred rather than have restored affection.”\footnote{Id.} It would lack a precise end, and it would entail
considerable expense.\textsuperscript{246} Instead, security depended upon the restoration of national fraternity: “Peaceful emigration to and from that portion of the country is one of the best means that can be thought of for the restoration of harmony.”\textsuperscript{247}

Commitment to the Constitution, and the constitutional order, would ensure security.\textsuperscript{248} This approach directly reflected Hamilton’s concern with protecting the political institutions of government in their ability to act on the purpose for which they had been formed. New governments must submit “loyally and heartily to the Constitution and the laws—the laws of the nation and the laws of the States themselves—accepting and obeying faithfully the whole Constitution as it is.”\textsuperscript{249} The Constitution lay at the core of the common defense. “Under this Constitution,” President James Garfield later reflected, “our people long ago made themselves safe against danger from without and secured for their mariners and flag equality of rights on all the seas.”\textsuperscript{250} President Grover Cleveland also acknowledged its importance, declaring as he took office:

On this auspicious occasion we may well renew the pledge of our devotion to the Constitution, which, launched by the founders of the Republic and consecrated by their prayers and patriotic devotion, has for almost a century borne the hopes and the aspirations of a great people through prosperity and peace and through the shock of foreign conflicts and the perils of domestic strife and vicissitudes.\textsuperscript{251}

This meant respect for the division of powers between the branches, an awareness of the authorities reserved to the States or to the people, and an appreciation for the powers granted to the executive branch. Cleveland vowed to protect and defend the U.S. Constitution—noting that this duty rested not just on the President, but on every patriotic citizen, whatever his occupation.\textsuperscript{252}

\begin{itemize}

\item 252. Id. at 171 (“[H]e who takes the oath today to preserve, protect, and defend the Constitution of the United States only assumes the solemn obligation which every patriotic citizen—on the farm, in the workshop, in the busy marts of trade, and everywhere—should share with him. The Constitution which prescribes his oath, my countrymen, is yours; the Government you have chosen him to administer for a time is yours; the suffrage which executes the will of freemen is yours; the laws and the entire scheme of our civil rule, from the town meeting to the State capitals and the national capital, is yours.”).
\end{itemize}
Throughout his time in office, Cleveland remained cognizant of the importance of the Constitution. In his Second Inaugural Address, he explained that the oath of office meant vowing obedience to the document’s commands. The Constitution itself, and the protection of the national government’s power (and the limits thereon), lay at the heart of his duties as President. He stated,

I shall to the best of my ability and within my sphere of duty preserve the Constitution by loyally protecting every grant of Federal power it contains, by defending all its restraints when attacked by impatience and restlessness, and by enforcing its limitations and reservations in favor of the States and the people.

In this manner, during the second epoch, the national security of the country rested on the protection of this Constitution, itself derived from the people and upheld in the interests of the entire nation.

3. Return to International Independence and Economic Growth

Having secured the Union at great expense, the country’s position in the international arena gradually crept back into the national consciousness. If anything, the Civil War had demonstrated the country’s success in achieving international independence. President Andrew Johnson reflected,

Under any circumstances our great extent of territory and variety of climate . . . make us singularly independent of the varying policy of foreign powers and protect us against every temptation to “entangling alliances,” while at the present moment the reestablishment of harmony and the strength that comes from harmony will be our best security against “nations who feel power and forget right.”

Johnson would seek to promote peace and amity with all foreign nations—from Europe and Asia to Africa and South America—with commerce as the main instrument of intercourse. Like Johnson, President Grover Cleveland and subsequent Presidents reiterated their commitment to the course set by Washington

255. Id.
257. Id. (“Our relations with the Emperor of China, so recent in their origin, are most friendly. Our commerce with his dominions is receiving new developments, and it is very pleasing to find that the Government of that great Empire manifests satisfaction with our policy and reposes just confidence in the fairness which marks our intercourse. The unbroken harmony between the United States and the Emperor of Russia is receiving a new support from an enterprise designed to carry telegraphic lines across the continent of Asia, through his dominions, and so to connect us with all Europe by a new channel of intercourse. Our commerce with South America is about to receive encouragement by a direct line of mail steamships to the rising Empire of Brazil . . . . A hope is entertained that our commerce with the rich and populous countries that border the Mediterranean Sea may be
during the first epoch. Underlying this policy was a sense not just that the United States needed to increase its economic strength, but that Europe had been waging an economic war against the United States. Benjamin Harrison later explained:

To hold in check the development of our commercial marine, to prevent or retard the establishment and growth of manufactures in the States, and so to secure the American market for their shops and the carrying trade for their ships, was the policy of European statesmen, and was pursued with the most selfish vigor.

The United States, no longer locked in civil war, could direct its energy “to the duty of equipping the young Republic for the defense of its independence by making its people self-dependent.” This meant stamping out “injurious foreign competition.”

But two problems, stemming from the first epoch, presented themselves: First, tension existed between expansion and the maintenance of a neutral, non-aggressive policy towards other countries. The former pulled the United States in the direction of an outward projection of American strength. The latter required restraint in the international arena. Second, the formation of alternative (i.e., non-political) domestic power-bases challenged the authority of the federal government.

a. Tension Between Expansion and Neutrality

In some areas, the expansionist drive met with little resistance. The Monroe Doctrine, for instance, succeeded in dissuading Russia from further involvement across the Pacific. In October 1867, Russia ceded Alaska, marking a full

---

258. See, e.g., Cleveland, First Inaugural Address, supra note 251, at 172 (“The genius of our institutions, the needs of our people in their home life, and the attention which is demanded for the settlement and development of the resources of our vast territory dictate the scrupulous avoidance of any departure from that foreign policy commended by the history, the traditions, and the prosperity of our Republic. It is the policy of independence, favored by our position and defended by our known love of justice and by our power. It is the policy of peace suitable to our interests. It is the policy of neutrality, rejecting any share in foreign broils and ambitions upon other continents and repelling their intrusion here. It is the policy of Monroe and of Washington and Jefferson—‘Peace, commerce, and honest friendship with all nations; entangling alliance with none.’”); Harrison, supra note 137, at 180–81 (“We have happily maintained a policy of avoiding all interference with European affairs . . . . Our citizens domiciled for purposes of trade in all countries and in many of the islands of the sea demand and will have our adequate care in their personal and commercial rights.”).

259. See Harrison, supra note 137, at 177 (describing the efforts of European statesmen to prevent the United States’ economic growth).

260. Id.

261. Id.

262. Id.

But not all efforts to establish American dominance succeeded so easily. Military engagement with Native American tribes in New Mexico and Arizona did not end until Geronimo’s surrender in 1886. In 1889, tension with Germany over the Samoan Islands resulted in the islands’ partition into German and American Samoa. The year 1893 witnessed revolution in the Hawaiian Islands. In Latin America, the Baltimore created friction between the United States and Chile. In a special message to Congress, President Harrison requested a formal apology from Chile for the mob attack on American sailors in the True Blue Saloon in Valparaíso. Chile backed down and made reparations for the harm suffered. The Venezuelan affair of 1895 subsequently gave rise to the first formal invocation of the Monroe Doctrine, when President Grover Cleveland resisted the expansion of British Guiana by informing the United Kingdom that the doctrine was still in force.

269. President Benjamin Harrison, Message to Congress (Jan. 25, 1892), reprinted in 9 MESSAGES AND PAPERS OF THE PRESIDENTS: 1879–1897, at 223–26 (James D. Richardson ed., 1898) (“In submitting these papers to Congress for that grave and patriotic consideration which the questions involved demand I desire to say that I am of the opinion that the demands made of Chile by this Government should be adhered to and enforced. If the dignity as well as the prestige and influence of the United States are not to be wholly sacrificed, we must protect those who in foreign ports display the flag or wear the colors of this Government against insult, brutality, and death inflicted in resentment of the acts of their Government and not for any fault of their own. It has been my desire in every way to cultivate friendly and intimate relations with all the Governments of this hemisphere . . . . It must, however, be understood that this Government, while exercising the utmost forbearance toward weaker powers, will extend its strong and adequate protection to its citizens, to its officers, and to its humblest sailor when made the victims of wantonness and cruelty in resentment not of their personal misconduct, but of the official acts of their Government . . . .”).

271. Letter from Richard Olney, Sec’y of State, to Thomas F. Bayard, U.S. Ambassador in London (July 20, 1895), in 1 FOREIGN RELATIONS OF THE UNITED STATES: 1895, at 545–58 (1896) (“By the frequent interposition of its good offices at the instance of Venezuela, by constantly urging and promoting the restoration of diplomatic relations between the two countries, by pressing for the arbitration of the disputed boundary [between Great Britain and Venezuela], by offering to act as arbitrator, by expressing its grave concern whenever new alleged instances of British aggression upon Venezuelan territory have been brought to its notice, the Government of the United States has made it clear to Great Britain and to the world that the controversy is one in which both its honor and its interests are involved and the continuance of which it can not regard with indifference . . . . That America is in no part open to colonization, though the proposition was not universally admitted at the time of its first enunciation, has long been universally conceded. We are now concerned, therefore, only with that other practical application of the Monroe doctrine the disregard of which by an European power is deemed an act of unfriendliness towards the United States . . . . The rule in question has but a single purpose and object. It is that no European power or combination of European powers shall forcibly deprive an American state of the right and power of self-government and of shaping for itself its own political fortunes and destinies . . . . The states of
The United States’ interests overseas grew so rapidly that a parallel concern kept pace: whether such growth was sustainable or whether it would ultimately undermine U.S. national security. During Grant’s tenure as President, for instance, Congress rejected incorporating Santo Domingo into the territory of the Union.\footnote{272} Of primary concern was the danger involved in incorporating non-white peoples—translated at the time as weakening the core of the country through overexpansion.\footnote{273} By Garfield’s presidency, though, the territory of the United States had expanded to fifty times greater than that of the original thirteen states, and population had increased by more than twenty-fold.\footnote{274} The center of population steadily moved westward.\footnote{275}

The tension between the United States’ expansionist tendencies and its unwillingness to become locked in international conflict came to a head in the Spanish-American War. Reports of the unfolding crisis in Cuba painted a dire picture.\footnote{276} McKinley had come to office vowing to continue the same approach to international affairs “inaugurated by Washington, keeping [the United States] free from entanglement, either as allies or foes, content to leave undisturbed with them the settlement of their own domestic concerns.”\footnote{277} McKinley wanted “no wars of conquest” and sought to “avoid the temptation of territorial aggression.”\footnote{278} For him, “War should never be entered upon until every agency of peace has failed; peace is preferable to war in almost every contingency.”\footnote{279}

The sinking of the Maine in Havana, however, tipped McKinley past the point of no return.\footnote{280} While he gave lip-service to humanitarian concerns, the key issue for McKinley was one of U.S. national security—the continued economic (and physical) strength of the United States:

\begin{flushright}
America, South as well as North, by geographical proximity, by natural sympathy, by similarity of governmental constitutions, are friends and allies, commercially and politically, of the United States. To allow the subjugation of any of them by an European power is, of course, to completely reverse that situation and signifies the loss of all the advantages incident to their natural relations with us.”\footnote{280}
\end{flushright}
The present condition of affairs in Cuba is a constant menace to our peace and entails upon this Government an enormous expense. With such a conflict waged for years in an island so near us and with which our people have such trade and business relations; when the lives and liberty of our citizens are in constant danger and their property destroyed and themselves ruined; where our trading vessels are liable to seizure and are seized at our very door by war ships of a foreign nation; the expeditions of filibustering that we are powerless to prevent altogether... these and others that I need not mention... are a constant menace to our peace and compel us to keep on a semi war footing with a nation with which we are at peace.281

At stake for McKinley was more than just Cuban independence; at stake was the United States’ position in the global arena.

In the 1890s, calls grew for a stronger navy, and Congress passed legislation to allow for the construction of new modern battleships.282 Alfred Thayer Mahan contributed significantly to naval reform.283 His writings emphasized the importance of sea-power, suggesting that the advent of submarine telegraphs and blockades demanded a robust naval response.284 Mahan postulated a difference between pure defensive war (so-called “passive defense”) and defense that relies on attack.285 The latter “may seem to be really offensive war, but it is not; it becomes offensive only when its object of attack is changed from the enemy’s fleet to the enemy’s country.”286 To Mahan, attack on the enemy’s country belonged to the Army; attack on the enemy’s fleet lay in the domain of the Navy.287 For full defensive capabilities, both were essential.288

Theodore Roosevelt, at age thirty-two, wrote glowingly about Mahan’s book:

He never for a moment loses sight of the relations which the struggles by sea bore to the history of the time; and, for the period which he covers, he shows, as no other writer has done, the exact points and the wonderful extent of the influence of the sea power of the various contending nations upon their ultimate triumph or failure, and upon the futures of the mighty races to which they belonged.289

While the U.S. Navy had proven strong enough during the Civil War, its ability to withstand attack from European powers lay in question.\textsuperscript{290} “It is true,” Roosevelt wrote, “that at the end of four years’ warfare we had developed a formidable fleet; but in the event of a European contest, it is not likely that we should be allowed as many weeks before the fatal blow fell.”\textsuperscript{291} While public belief in American ingenuity was high, it would be “sheer folly” to rely on it to prevent attack: “Proper forts, with heavy guns, could do much; but our greatest need is the need of a fighting fleet . . . . We need a large navy, composed not merely of cruisers, but containing also a full proportion of powerful battleships, able to meet those of any other nation.”\textsuperscript{292}

Eight years later, the United States had the ability to find out in first-hand terms what would happen when the U.S. Navy was pitted against one of the leading European powers. Battles between Spain and the United States raged from the Caribbean to the Pacific Ocean, in the course of which America repeatedly demonstrated its military and naval superiority.\textsuperscript{293} In the end, the 1898 Treaty of Paris acknowledged that America was no longer merely a group of loosely affiliated colonies-turned-states, lacking strength and international standing.\textsuperscript{294} Spain relinquished control over Cuba and ceded to the United States the island of Puerto Rico, all Spanish islands in the West Indies, the island of Guam, and the Philippines.\textsuperscript{295}

The event proved to be a watershed in the history of U.S. national security. The country secured a prominent place on the world stage. It had stood face-to-face with the Spanish Navy and triumphed. Its economic and military power could no longer be ignored. U.S. interests expanded. No longer would the country focus merely on unity or on building international independence. It had obtained both. The economic growth it so jealously sought paid off. The new and immediate question confronting the United States was how to best exercise its power to advantageously shape international affairs. This question pushed the United States from the first epoch and into the second. Its very success in gaining access to more land meant that the country was becoming more intimately familiar with the geopolitics of South America, Central America, and Asia, as well as Europe and Africa, where the country continued to maintain a strong diplomatic and commercial presence.

b. Increasing Number of Domestic Power-Bases

The second problem that confronted the United States and that helped move the country into the second epoch similarly stemmed from the successes of the first age in shoring up the country’s economic strength. To some extent, the problem also related to increasing protections afforded to individuals and groups—rights central to the constitutional amendments, which over time evolved into their own source of power. In this context, new and expanding domestic economic, political, and religious power-bases began to challenge state and federal authority.

Industrialization brought with it prodigious growth. The 1870s witnessed the extension of railroads into the interior, the creation of iron and steel plants, the production of more coal and oil, the introduction of electricity (leading, eventually, to automation), and new concepts of corporate structure and finance.296 The question became how to mitigate the deleterious consequences of increased mobilization and rapid urbanization.

As a domestic matter, industrialization became a national security concern to the extent that corporate interests usurped the power of the government. From their early days, the railroads attempted to gain access to political levers.297 Successive administrations saw this as putting the republican form of government, founded on the sovereignty of the people, at risk. President Andrew Jackson warned Congress,

In this point of the case the question is distinctly presented whether the people of the United States are to govern through representatives chosen by their unbiased suffrages or whether the money and power of a great corporation are to be secretly exerted to influence their judgment and control their decisions.298

President Martin Van Buren, following Jackson, remarked that he, too, was convinced of the dangers to which political opinion would be exposed “by any further increase of the already overgrown influence of corporate authorities.”299 President Abraham Lincoln later saw the growing power of corporations and the consequent threat to the national government in the aftermath of the Civil War and

See generally ALLAN NEVINS, THE EMERGENCE OF MODERN AMERICA, 1865–1878 (1941) (discussing how agriculture gave way to industry in the post-bellum period); ANDREW CARNEGIE, THE EMPIRE OF BUSINESS 291–302 (1903) (discussing the management of railroads); HISTORY OF THE UNITED STATES: CONTINUED, PAGE 5, INT’L. WORLD HISTORY PROJECT, http://history-world.org/history_of_the_united_states5.htm (last visited Mar. 15, 2012) (“Corporations introduced new styles of management, or business organization. The railroads, which needed to manage crews, fuel, repairs, and train schedules over large areas, were the first to develop new management techniques.”).

remarked:

As a result of the war, corporations have been enthroned and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until all wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment more anxiety than ever before, even in the midst of war.  

By the time Republican President Ulysses S. Grant sought a third term, the growing influence of corporate interests had reached such a height that his party nominated Rutherford B. Hayes instead. President Grover Cleveland later warned Congress, “Corporations, which should be the carefully restrained creatures of the law and the servants of the people, are fast becoming the people’s masters.”

It was not just corporate entities that threatened federal authority. Other private power-bases emerged. They too created a challenge for the federal government, as did their interactions with nongovernmental entities. The conflict between labor unions and corporations for instance, prompted the federal government to act over the authority of the states. The legal framework adopted was a national security one, consistent with the country’s actions in war. The confrontation between Eugene Debs’s American Railway Union and the Pullman Palace Car Company provides a vivid example of how the federal government responded to the labor conflict as a threat to national security.

During the Panic of 1893, Debs responded to cut wages and a “wildcat” strike (a strike that is unauthorized or uncoordinated by the union) by attempting to directly negotiate with Pullman and, once negotiations failed, formally striking. President

Hayes 58 (2002) (“The year 1872 saw the Liberal Republicans’ revolt against the Grant administration, provoked by its efforts to annex the Dominican Republic, its failure to carry out civil service reforms, and its dependence on corrupt political machines.”); Yanek Mieczkowski, THE ROUTLEDGE HISTORICAL ATLAS OF PRESIDENTIAL ELECTIONS 61, 63 (2001) (“A large contingent of Republicans was disillusioned with the Grant scandals . . . . These disgruntled ‘Liberal Republicans’ were high-minded, erudite men who wanted reform and believed that government deserved better men than Grant and his ilk. Decrying ‘Grantism,’ a term that became synonymous with graft and corruption, they broke away . . . the election of 1876 turned out to be the most drawn-out in American history. . . . Ulysses S. Grant . . . wanted to run for a third term, but the Republicans would not hear of it. . . . Grant’s sorry record of scandals would have made him a liability for the Republicans. What they needed was a man of unimpeachable integrity. . . . The country was offended by the corruption of the Grant administration.”).

302. President Grover Cleveland, Annual Address to Congress (Dec. 3, 1888).

303. Letter from John Altgeld, Governor, Ill., to Grover Cleveland, President of the U.S. (July 6, 1894), in The Daily News Almanac and Political Register for 1895, at 84 (2d ed. 1895) [hereinafter The Daily News Almanac and Political Register for 1895], available at http://hdl.handle.net/2027/mdp.39015026439961?urlappend=%3Bseq=90.85 (referencing the first federal military interference in a labor dispute).

Grover Cleveland, over the objection of the Governor of Illinois, sent in federal troops.\textsuperscript{305} He acted under an 1861 statute that Congress introduced in the context of the Civil War.\textsuperscript{306} The pertinent section read:

\begin{quote}
Whenever, by reason of unlawful obstructions, combinations, or assemblages of persons, or rebellion against the authority of the Government of the United States, it shall become impracticable, in the judgment of the President of the United States, to enforce, by the ordinary course of judicial proceedings, the laws of the United States within any State or Territory of the United States, it shall be lawful for the President of the United States to call forth the militia or any or all of the states of the Union, and to employ such parts of the land and naval forces of the United States as he may deem necessary to enforce the faithful execution of the laws of the United States, or to suppress such rebellion in whatever State or Territory thereof the laws of the United States may be forcibly opposed, or the execution thereof forcibly obstructed.\textsuperscript{307}
\end{quote}

Although the statute required the President to accompany any action with a proclamation, Cleveland failed to do so; instead, he simply authorized the military to put down the strikes.\textsuperscript{308} John P. Altgeld, the Governor of Illinois, lodged a formal protest: “[I]t is not soldiers that the railroads need so much as it is men to operate trains.”\textsuperscript{309} The country was not at war. The question was not one of political rebellion. The statute of 1861, Altgeld argued, “authorized the use of federal troops in a state whenever it shall be impracticable to enforce the laws of the United States within such state by the ordinary judicial proceedings. Such a condition does not exist in Illinois.”\textsuperscript{310} The strikes, for Altgeld, should have been a matter of local self-government. “As governor of the state of Illinois,” Altgeld wrote, “I protest against this and ask the immediate withdrawal of the federal troops from active duty in this state.”\textsuperscript{311}

\textsuperscript{305} Id. at 492 (“By July 10, nearly 2,000 troops were in Chicago to aid the railroads in restoring freight traffic . . . . Soldiers were also sent to Los Angeles, Raton (New Mexico), Trinidad (Colorado), and many other towns to enforce the approximately 100 orders against the ARU and other unions engaged in the strike.”).

\textsuperscript{306} See Law of July 29, 1861, ch. 25, 12 Stat. 281 (revising the basic laws of 1795 and 1807 dealing with the domestic use of the military to respond to civil disorder).

\textsuperscript{307} Id.

\textsuperscript{308} See id. (“[W]henever, in the judgment of the President, it may be necessary to use military force hereby directed to be employed and called forth by him, the President shall forthwith, by proclamation, command such insurgents to disperse and retire peaceably to their respective abodes, within a limited time.”); \textit{The Pullman Boycott, in The Daily News Almanac and Political Register for 1895, supra note 303, at 84–85 (discussing the chronology of events and President Cleveland’s actions); see also G. Norman Lieber, The Use of the Army in Aid of the Civil Power 27 (1898) (noting that President Cleveland used the military before issuing the proclamation).

\textsuperscript{309} Letter from John Altgeld, Governor, Ill., to President Grover Cleveland (July 5, 1894), \textit{in The Daily News Almanac and Political Register for 1895, supra note 303, at 83.

\textsuperscript{310} Id.

\textsuperscript{311} Id. (“Each community should govern itself so long as it can and is ready and able to enforce the law, and it is in harmony with this fundamental principle that the statute authorizing the president to send troops into states must be construed. Especially is this so in matters relating to the exercise of the police power and the preservation
President Cleveland saw matters rather differently. He replied the following day:

Federal troops were sent to Chicago in strict accordance with the constitution and laws of the United States, upon the demand of the post-office department, that obstruction of the mails should be removed, and upon the representations of the judicial officers of the United States that process of the federal courts could not be executed through the ordinary means, and upon abundant proof that conspiracies existed against commerce between the states.312

Cleveland added that the positioning of soldiers was “not only proper but necessary.”313 The immediate constitutional claims stemmed from the national legislature’s authorities under Article I § 8, cl. 7 (post offices) and Article I § 8, cl. 3 (commerce), as well as Article I § 8, cl. 18 (Necessary and Proper Clause) claims for federal jurisdiction. Underlying Cleveland’s claim, however, were a series of legal opinions that suggested constitutional justification rested with the President’s commander-in-chief power and his duty to take care that the laws be faithfully executed. The President’s power and duty bore an intimate connection. Former Attorney General William Miller, writing on July 11, 1894 to Attorney General Richard Olney about the President’s use of the military to put down the strikes, explained:

That the President has the authority and that it is his duty to use the whole power of the Government for the enforcement of the laws of the United States seems to me to be axiomatic. It is made his duty to take care that the laws be faithfully executed. He is made Commander-in-Chief of the Army and Navy. In my judgment, the power thus conferred is given in order that he may execute the duty thus imposed.314

The U.S. Army analysis that followed the Pullman strikes agreed with Miller’s position.315 It cited In re Neagle, which provides, “The power and duty imposed on the President to ‘take care that the laws are faithfully executed,’ necessarily carries with it all power and authority necessary to accomplish the object sought to be

   of law and order. To absolutely ignore a local government in matters of this kind when the local government is ready to furnish assistance needed and is amply able to enforce the law, not only insults the people of this state by imputing to them an inability to govern themselves or an unwillingness to enforce the law, but is in violation of a basic principle of our institutions. The question of federal supremacy is in no way involved.”)

312. Letter from Grover Cleveland, President of the U.S., to John P. Altgeld, Governor, Ill. (July 5, 1894), in THE DAILY NEWS ALMANAC AND POLITICAL REGISTER FOR 1895, supra note 303, at 83.

attained." The Army found further impetus in the Vesting Clause of Article II, combined with the Take Care Clause. Support could also be found in Article IV, § 4. The “United States” could not be limited to just Congress when it was in session—the guarantees in question were “intended to be effective at all times.”

The power to provide the protections guaranteed by the Constitution, moreover, by definition requires the power to command—an authority held by the President as Commander in Chief.

Altgeld again objected, writing that Cleveland’s answer involved startling conclusions and evaded the point at issue: that self-government was as essential as federal supremacy. He noted that under the Constitution, “except in times of war, the military shall be subordinate to civil authority.” No state of war existed; yet the federal troops ordered into Chicago were neither under the civil authorities nor were they in any way responsible to them for their conduct. “They are not even acting under the United States marshal or under any federal officer of the state, but are acting directly under military orders issued from military headquarters at Washington, and insofar as these troops act at all it is military government.”

Altgeld also argued that the opinions of various executive branch officials were meaningless from a perspective of checks on federal authority: “All of these officers are appointed by the executive. Most of them can be removed by him at will. They were not only obliged to do his bidding, but they are in fact a part of the executive.” By this logic, any local disturbance might provide an excuse “for an ambitious executive to order out the military forces of all of the states and establish at once a military government.”

President Cleveland replied that perhaps instead of discussing the matter, those in authority ought to focus on restoring law

The strike got worse. Attorney General Olney realized, days into the military action, that the President had neglected to issue a formal proclamation as required by law. Accordingly, on July 8th, the President issued a statement, warning all those engaged in the strike to desist. “Those who disregard this warning and persist in taking part . . . cannot be regarded otherwise than as public enemies.”

Cleveland stated, moreover, that it may be impossible for the troops to distinguish between those engaged in the strike and mere observers. The President advised that those merely curious about the strike remain at home.

The incident provides one of many examples in which the federal government inserted itself into labor union disputes, above the authority of state government and within a national security framework. Underlying such decisions was a fear that the private power-bases would bypass federal authority. Ironically, these very power-bases emerged as a result of the government’s success in strengthening the economy during the first epoch.

The question that arose was not just how to deal with individual manifestations of the domestic groups’ power, but also what to do about general corporate power over the long-term. Concern grew about the unfair competition created by monopolies, particularly in regard to the railroads. In 1887, Congress thus passed the Interstate Commerce Act, which established the Interstate Commerce Commission. This body was given the power to investigate and to prosecute companies that violated the law. Corporate power, outside the law, must be curbed, as Benjamin Harrison explained two years later: “If our great corporations would more scrupulously observe their legal limitations and duties, they would have less cause to complain of the unlawful limitations of their rights or of violent interference with their operations.”

Concern extended beyond the economic sphere. Political and economic writings challenging the existing order began to emerge, raising questions about whether the laissez-faire economics of Adam Smith and the Democratic-Republican tenets underlying the political system had yielded an optimal system. Special attention was drawn to the ideas of Karl Marx (e.g., his Economic and Philosophical Manuscripts, which questioned private property and advocated communism). The anarchist movement drew inspiration from William Goodwin’s An Enquiry Concerning Political Justice, the anti-statist and anti-authoritarian ideas of Peter Kropotkin and Mikhail Bakunin, and Emma Goodman’s demands that workers take matters into their own hands through collective anarchy. The attention drawn by such works and those embracing these theories intensified in the context of serious threats. In assassinating President McKinley, Leon Czolgosz imitated Gaetano Bresci, who had killed King Umberto I of Italy in 1900. For President Roosevelt, “When compared with the suppression of anarchy, every other question sinks into insignificance.”

The national government would not tolerate challenges to national authority from the economic, political, or religious spheres. Any effort to usurp national power would be stopped. President James Garfield thus reflected on the Mormon Church that, quite apart from its polygamist teachings, it prevented the administration of justice “through ordinary instrumentalities of law.” No ecclesiastical organization could “be safely permitted to usurp in the smallest degree the functions and powers of the National Government.” President William McKinley similarly noted that the purpose for denying vigilantism of any sort was to protect the domestic order:

337. See, e.g., Richard T. Ely, Past and Present Political Economy, in JOHNS HOPKINS UNIVERSITY STUDIES IN HISTORY AND POLITICAL SCIENCE (1884) (questioning the premise that individuals are solely motivated by self interest and suggesting that the laissez-faire system had failed). The year after Ely published his treatise, the American Economics Association formed in concurrence with a statement of principles drafted by Ely: “While we recognize the necessity of individual initiative in industrial life, we hold that the doctrine of laissez faire is unsafe in politics and unsound in morals; and that it suggests an inadequate explanation of the relations between the state and the citizens.” NANCY COHEN, THE RECONSTRUCTION OF AMERICAN LIBERALISM, 1865–1914, at 165 (2002).

342. Garfield, supra note 250.

343. Id.
The constituted authorities must be cheerfully and vigorously upheld. Lynchings must not be tolerated in a great and civilized country like the United States; courts, not mobs, must execute the penalties of the law. The preservation of public order, the right of discussion, the integrity of courts, and the orderly administration of justice must continue forever the rock of safety upon which our Government securely rests.344

What these perceived threats to national authority shared in common was that they themselves were the product of a successful national security strategy. Yet their very existence presented a threat to the national government. This led, in the second epoch, to an increased emphasis on the dominance of federal power, and direct investment in social and economic concerns previously left in the hands of the states.

B. Formative International Engagement and Domestic Power: 1898–1930

The second epoch built on the first age, in that it incorporated the basic tenets of the Founding era: primarily, unity; and secondarily, international independence and economic growth. To these, it added formative international engagement, as well as efforts to counter growing bases of domestic power. To the extent that the two epochs found themselves in tension, the values of the first era dominated.

1. Political, Economic, and Military Concerns

The war of 1898 proved pivotal in the United States’ approach to national security. By expanding the perception of what would be required in the service of national interests, it introduced a new epoch in American history. The country proved itself able to compete and hold its own on the world stage. Attention gradually turned to how the United States could have a more formative impact on world affairs. In the political realm, international arbitration took center stage.

Immediately prior to the war, arbitration drew some attention as an instrument of international law—one (of many) tools in the diplomatic chest.345 It brought with it a number of advantages: by participating in international arbitration, the United States could shape, and not merely respond to, the global political environment. Such an approach, moreover, extended American influence beyond bilateral or multilateral agreements on specific issues of dispute. It provided the country with the power to determine how disputes would be handled in the future.

With the country’s outward projection of power, however, came internal conflict. An early effort to craft an international arbitration instrument (signed with Great Britain early in 1897) failed to pass the Senate based on constitutional

344. McKinley, First Inaugural Address, supra note 277, at 198.
concerns. The issue for the Senate was whether the treaty in question was an agreement to enter arbitration, or whether each arbitration would produce a new treaty requiring subsequent Senate approval. In 1904 and 1905, though, Secretary of State John Hay negotiated more than ten arbitration treaties. Elihu Root, who succeeded Hay in President Theodore Roosevelt’s Second Administration, negotiated another forty such treaties. In 1913, Secretary of State William Jennings Bryan proposed the further negotiation of “cooling-off treaties.” By the end of the year, approximately thirty such agreements had been signed.

Support for the use of international instruments to prevent war grew, leading to U.S. participation in the First Hague Conference. The meeting of 1899 resulted in the creation of a permanent court of arbitration, accessible at all times by the party-states. The First Hague Conference also produced a convention that prohibited the launching of projectiles and explosives from balloons. The convention codified the behavior of belligerents, including qualifications (§ 1, cl. 1), prisoners of war (§ 1, cl. 2), and treatment of the sick and wounded (§ 1, cl.

346. The Senate vote on the Arbitration Treaty with Great Britain registered forty-three in favor and twenty-six against, leaving it three votes shy of the two-thirds majority required to ratify treaties. See S. JOURNAL, 30TH CONG., 55 SESS. (1897).

3). It addressed the manner of hostilities, discussing bombardments (§ 2, cl. 1), spies, (§ 2, cl. 2), flags of truce (§ 2, cl. 3), capitulation (§ 2, cl. 4), and armistices (§ 2, cl. 5). In addition, the Annex discussed military authority over hostile territory (§ 3), as well as the internment of belligerents and care for the wounded in neutral countries (§ 4). These instruments, and the role of the United States in crafting them, demonstrated that the country had come to view what fell within its national security interests more broadly: it now focused on shaping the international environment in which it had obtained independence.

The United States also experimented with becoming an arbiter in international disagreements. The Franco-German conflict over Morocco in the early twentieth century provided one such opportunity. As a formal matter, the United States was only nominally involved: a local Moroccan bandit had captured an American citizen, Ion Perdicaris. France stood poised to assume control of Morocco. Germany opposed France, and sought to negate France’s efforts by recognizing the sultanate of Morocco. The United States did not have to become involved; however, it subsequently worked to broker an agreement. Roosevelt himself evinced concern that there might be a war. He later reflected,
I felt in honor bound to try to prevent the war if I could, in the first place, because I should have felt such a war to be a real calamity to civilization; and in the next place, as I was already trying to bring about peace between Russia and Japan, I felt that a new conflict might result in what would literally be a world conflagration; and finally for the sake of France. 363

Ultimately, U.S. plenipotentiaries signed the final agreement with the inclusion of a reservation that exempted the country from any responsibility for the treaty’s terms. 364

Political affairs presented just one way in which the country could pursue a more aggressive international role. The United States also took steps in the economic realm. Beyond protecting its commercial routes and goods, the country began exploring ways to prevent future threats to U.S. trade.

Following the Spanish-American War, for instance, Spain ceded the Philippines to the United States. 365 It was not immediately clear what to do with the islands. 366 They provided the United States, though, with territory in Asia, drawing American attention eastward. Accordingly, in 1899, Secretary of State John Hay attempted to open trade with China. 367 After making inquiries to Russia, France, Britain, Germany, Italy, and Japan, he announced that trade with China could commence (despite some question as to whether this was actually the case). 368 In 1900, Hay issued what has come to be called the Second Open Door Note, which was a request that European powers not use the Boxer Rebellion in China as an excuse to partition the region. 369

The United States’ economic interests in the second epoch overrode its longstanding aversion to “entangling alliances.” Instead, to ensure that U.S. commerce would flow, the United States proved willing to commit its military forces to protect the political structures of other countries. In 1902, Panama separated from

General Act of the International Conference of Algeciras, Apr. 7, 1906, 34 Stat. 2905 (“The Government of the United States of America, having no political interest in Morocco and no desire or purpose having animated it to take part in this conference other than to secure for all peoples the widest equality of trade and privilege with Morocco . . . declares that, in acquiescing in the regulations and declarations of the conference . . . it does so without assuming obligation or responsibility for the enforcement thereof.”).
368. See id.
369. Letter from John Hay to American Representatives in Major Capitals (July 3, 1900), in FOREIGN RELATIONS OF THE UNITED STATES: 1901 app. at 12 (1902) (“[T]he policy of the Government of the United States is to seek a solution which may bring about permanent safety and peace to China, preserve Chinese territorial and administrative entity, protect all rights guaranteed to friendly powers by treaty and international law, and safeguard for the world the principle of equal and impartial trade with all parts of the Chinese Empire.”). U.S. policy towards China over the next four decades, though, proved somewhat irregular: unwilling to back up its claims with force, the United States’ economic advance and retreat proved sensitive to interstate politics.
Columbia and almost immediately offered the United States a treaty for the Panama Canal. Following byzantine negotiations, the United States agreed. As part of the treaty, the United States vowed to maintain Panama’s independence. In exchange, Panama agreed to give the United States “in perpetuity the use, occupation and control of a zone of land and land under water for the construction, maintenance, operation, sanitation and protection of said Canal . . . .” The United States’ approach in this matter leaned towards the Monroe Doctrine by preventing other countries from interfering in the Americas; however, it also signaled a willingness to form explicit, written “entangling alliances” that could bring the United States to the brink of war.

As a military matter, Vice President Theodore Roosevelt established a more aggressive position for the United States in the international arena. He favored a proactive stance over a more reactive one, famously stating, “Speak softly and carry a big stick; you will go far.” Shortly after he uttered his remarks, an assassin struck William McKinley and Roosevelt took the presidency. As President, Roosevelt immediately put his words into action negotiating a treaty with Cuba. The treaty stipulations, explicitly backed by the land and naval forces of the United States, restricted Cuba’s future actions, and prevented Cuba from entering into any agreements with any foreign power. The treaty also gave the United States the right to intervene in the country to maintain Cuban independence, and ratified and validated “all Acts of the United States in Cuba during its military occupancy thereof.”

Roosevelt took a similarly aggressive stance towards the disputed boundary separating Alaska and Canada—a dispute made all the more important following the discovery of gold in the Klondike in August 1896. Great Britain, having

just fought (and won) the Boer War, 384 and cognizant of America’s forward-leaning stance, decided not to press its claims and largely conceded. 385 Britain supported the form of arbitration selected by the U.S. Administration—a rather loaded deck, in favor of the United States. Roosevelt appointed Secretary of War Elihu Root, Senator Henry Cabot Lodge of Massachusetts, and former Senator George Turner of Washington as jurists on the arbitration board. 387 The sole British commissioner who took part in the exercise sided with the Americans. 388 That the exercise was primarily a matter of politics, and not of law, was abundantly clear, as evidenced by the lack of American jurists on the panel.

Policies adopted in Cuba, Panama, China, and Alaska presaged a more aggressive stance towards matters in the Western Hemisphere, and the potential for the United States to perform a type of policing role presented itself. Roosevelt spelled out his position in more detail in his 1904 State of the Union Address:

All that this country desires is to see the neighboring countries stable, orderly, and prosperous. Any country whose people conduct themselves well can count upon our hearty friendship. If a nation shows that it knows how to act with reasonable efficiency and decency in social and political matters, if it keeps order and pays its obligations, it need fear no interference from the United States. Chronic wrongdoing, or an impotence which results in a general loosening of the ties of civilized society, may in America, as elsewhere, ultimately require intervention by some civilized nation, and in the Western Hemisphere the adherence of the United States to the Monroe Doctrine may force the United States, however reluctantly . . . to the exercise of an international police power. 389

The articulation of Roosevelt’s Corollary to the Monroe Doctrine signaled that the United States would begin to involve itself more directly in matters in the Western Hemisphere. The justification for such actions included U.S. interests, but began also to take on an appeal to humanitarian concerns. 390 Thus, while attention to crimes and violence perpetrated at home deserved attention, the exercise of

385. See Gibson, supra note 382, at 32–33 (noting the presence of American troops on the boundary contributed to Britain agreeing to arbitration).

389. President Theodore Roosevelt, State of the Union Address (Dec. 6, 1904), in 2 The State of the Union Messages of the Presidents: 1790–1966, at 2134 (Fred L. Israel ed., 1966); see also id. at 2134–35.
390. Id. at 2135 (“In asserting the Monroe Doctrine, in taking such steps as we have taken in regard to Cuba, Venezuela, and Panama, and in endeavoring to circumscribe the theater of war in the Far East, and to secure the open door in China, we have acted in our own interest as well as in the interest of humanity at large.”).
violence on a larger scale, in the international environment, could hardly be ignored:

We have plenty of sins of our own to war against, and under ordinary circumstances we can do more for the general uplifting of humanity by striving with heart and soul to put a stop to civic corruption, to brutal lawlessness and violent race prejudices here at home than by passing resolutions about wrongdoing elsewhere. Nevertheless there are occasional crimes committed on so vast a scale and of such peculiar horror as to make us doubt whether it is not our manifest duty to endeavor at least to show our disapproval of the deed and our sympathy with those who have suffered by it.\textsuperscript{391}

American strength would not come from acting with good will, but from being willing to engage with force, when necessary. It was no longer sufficient simply to have peace; it must be seen as a just peace—otherwise, recourse to force might be necessary.\textsuperscript{392}

The United States’ new, more invigorated role on the international stage stemmed from its self-awareness of the power accumulated during the first epoch. “Power,” Roosevelt reflected, “invariably means both responsibility and danger.”\textsuperscript{393} The Founders had faced dangers that no longer presented a threat:

We now face other perils, the very existence of which it was impossible that they should foresee. Modern life is both complex and intense, and the tremendous changes wrought by the extraordinary industrial development of the last half century are felt in every fiber of our social and political being.\textsuperscript{394}

The country thus moved from the defensive posture of the first epoch—wherein the United States sought primarily to ensure the existence of the Union and secondarily to establish international independence and economic strength—to a more aspirational position.\textsuperscript{395} The domestic picture was not always rosy. But, as

We wish it because we think it is right and not because we are afraid.”).
\textsuperscript{393} Id.
\textsuperscript{394} Id.
\textsuperscript{395} Starting in the 1890s, navalists became convinced of the need for a canal to protect U.S. commercial interests and to unite the U.S. fleets on the two coasts in the event of war. See, e.g., MAHAN, INFLUENCE OF SEA POWER, supra note 285, at 26 (emphasizing the importance of being able to quickly move the fleet to shift power, thus underscoring the importance of the Isthmian Canal). The Caribbean would become an “American lake,” around which subservience to European powers would not be tolerated. Ephraim R. McLean, The Caribbean—An American Lake, 67 U.S. NAVAL INST. PROCEEDINGS 947–60 (1941). It was time for the United States to use its strength to shape international political, economic, and military matters: “Upon the success of our experiment . . . much depends, not only as regards our own welfare, but as regards the welfare of mankind. If we fail, the cause of free self-government throughout the world will rock to its foundations, and therefore our responsibility is heavy, to ourselves, to the world as it is to-day, and to the generations yet unborn.” Theodore Roosevelt, Inaugural Address, supra note 392, at 209–12.
Roosevelt noted in 1905, “[W]hen I feel gloomy about democracy I am positively refreshed by considering the monstrous ineptitude of the ideal absolutism when tried out [in Russia] during the last eighteen months.”

a. Military Might

To take on this new, more formative international role, the United States required a stronger naval force. Gone were the concerns of the Jeffersonians, who feared that building such strength would attract unwanted attention from Great Britain and challenge her rule of the seas. In the nineteenth century, Britain had exacted a high toll from the Dutch in response to their audacious efforts to challenge British primacy. But by the dawn of the twentieth century, having established the United States’ naval credentials by taking on Spain—and winning—doubt about further expanding the nation’s naval capacities all but vanished.

President William Howard Taft came to office determined to continue Roosevelt’s program: “My distinguished predecessor,” he began, “has in many speeches and messages set out with great force and striking language the necessity for maintaining a strong navy commensurate with the coast line, the governmental resources, and the foreign trade of our Nation.” Taft reiterated the reasons that Roosevelt had presented “in favor of the policy of maintaining a strong navy as the best conservator of our peace with other nations, and the best means of securing respect for the assertion of our rights, the defense of our interests, and the exercise of our influence in international matters.” Taft emphasized that even as the United States pursued its interests through shaping international law and forging bilateral treaties, the country must be prepared for hostilities. Military might, moreover, would increase the country’s credibility abroad—not just in Europe, but also with regard to Asia:

In the international controversies that are likely to arise in the Orient growing out of the question of the open door and other issues the United States can maintain her interests intact and can secure respect for her just demands. She

401. Id. at 217–18.
402. Id. at 218 (“[W]e should be blind to existing conditions and should allow ourselves to become foolish idealists if we did not realize that, with all the nations of the world armed and prepared for war, we must be ourselves in a similar condition, in order to prevent other nations from taking advantage of us and of our inability to defend our interests and assert our rights with a strong hand.”).
will not be able to do so, however, if it is understood that she never intends to back up her assertion of right and her defense of her interest by anything but mere verbal protest and diplomatic note.\(^{403}\)

The Treasury could afford a stronger military presence. A navy, unlike a large standing army, would give the Republic little to fear. And the Spanish-American War had presented the country with an opportunity. Taft explained,

The policy of the United States in the Spanish war and since has given it a position of influence among the nations that it never had before, and should be constantly exerted to securing to its bona fide citizens, whether native or naturalized, respect for them as such in foreign countries.\(^{404}\)

The emphasis, as in the first epoch, would be on commerce; but it would be backed with military might to ensure the elimination of trade barriers in Europe, the transfer of goods through the Panama Canal, and the flow of trade with Asia.

\(b.\) *Secondary Inquiry: From Rule of Law to Type of Law*

As a domestic matter, industrialization had created powerful actors who threatened to usurp national authority. Urbanization meant that population centers were growing, with scant attention yet paid to a host of deleterious consequences—such as poor sanitation, growing incidence of disease, and bad working conditions.\(^{405}\) Companies were beginning to wield a significant amount of power.\(^{406}\) President Woodrow Wilson recognized in his *First Inaugural Address* that the economic success of the country had come at a price:

There has been something crude and heartless and unfeeling in our haste to succeed and be great. Our thought has been “Let every man look out for himself, let every generation look out for itself,” while we reared giant machinery which made it impossible that any but those who stood at the levers of control should have a chance to look out for themselves.\(^{407}\)

Wilson sought to ensure that the government did not become “a facile instrument in the hand of private interests.”\(^{408}\) It was essentially a battle for domestic power.

The question was not whether the national government needed to protect the rule of law per se—this was a core aspect of U.S. national security in the first epoch. Instead, attention turned to a secondary conversation: what types of laws

\(^{403}\) *Id.*

\(^{407}\) *Id.*  
\(^{408}\) *Id.*
were best for society. "The first duty of law," Wilson reflected, "is to keep sound the society it serves. Sanitary laws, pure food laws, and laws determining conditions of labor which individuals are powerless to determine for themselves are intimate parts of the very business of justice and legal efficiency."

Although this era in American history is often discussed in terms of the protection of laborers, what could be missed in observing this period is the role of the federal government in diminishing the strength of corporate entities and bolstering its own power. It took on a more aggressive role in shaping not just international law and global political, economic, and military affairs, but also the political, economic, and social fabric of domestic life—a role traditionally left in state hands.

Wilson’s initial decision to stay out of World War I reflected the domestic national security concerns that had been at the heart of the first epoch. Made up of citizens from many different countries, the United States could hardly jump into the battle on one side. To do so risked alienating part of the citizenry and opening lines of schism where national fraternity had, slowly and painstakingly, been nurtured. Wilson observed,

The people of the United States are drawn from many nations, and chiefly from the nations now at war. It is natural and inevitable that there should be the utmost variety of sympathy and desire among them with regard to the issues and circumstances of the conflict. Some will wish one nation, others another, to succeed . . . .

Wilson anticipated that in such circumstances, it would be “easy to excite passion and difficult to allay it.” In short, “Such divisions amongst us would be fatal to our peace of mind and might seriously stand in the way of the proper performance of our duty as the one great nation at peace . . . .”

National fraternity, however, splintered over the new and emerging power-bases within society. Among the most prominent advocacy groups was the National Security League (“NSL”), an organization formed in 1915 to encourage the United States to prepare militarily for engagement in the war. The NSL focused on what it called “patriotic education” and inculcating belief in national military ser-

sices.\footnote{415} It opposed isolationism and sought government regulation of the economy, a unified national defense agency, and, interestingly, an interstate highway system.\footnote{416} (The last being seen as necessary for consolidating national control of the domestic arena.) The NSL strongly supported the Espionage Act of 1917 and the Sedition Act of 1918.\footnote{417} Despite the group’s embrace of strong federal powers, however, the NSL’s size and its increasing influence generated concern at a federal level.\footnote{418} Congress initiated hearings to gain insight into the power structure of the organization, in the process diminishing the NSL’s stature.\footnote{419} The hearings directly questioned the NSL’s support for the President during the war effort.\footnote{420} The government would not tolerate criticism by domestic power-bases, whatever their support for government initiatives might be.\footnote{421}

The United States’ decision to involve itself in World War I following the sinking of the *Lusitania* involved defensive considerations—typical of the first epoch in U.S. national security—as well as elements of the formative concerns that mark the second age. The German submarine attack on the *Lusitania* off the coast of Ireland killed 1198—including 128 Americans.\footnote{422} Germany’s stated goal was to counter the military threat presented by the merchant vessel.\footnote{423} A U.S. State

\footnote{423.} Foreign Minister Gottlieb von Jagow, The Sinking of the *Lusitania*—Official German Response (1915), available at http://www.firstworldwar.com/source/lusitania_germanresponse.htm (“The Government of the United States proceeds on the assumption that the *Lusitania* is to be considered as an ordinary unarmed merchant vessel. The Imperial Government begs in this connection to point out that the *Lusitania* was one of the largest and fastest English commerce steamers, constructed with Government funds as auxiliary cruisers, and is expressly included in the navy list published by the British Admiralty. It is, moreover, known to the Imperial Government from reliable information furnished by its officials and neutral passengers that for some time practically all the more valuable English merchant vessels have been provided with guns, ammunition and other weapons, and reinforced with a crew specially practiced in manning guns. According to reports at hand here, the *Lusitania* when she left New York undoubtedly had guns on board which were mounted under decks and masked . . . . In taking them on board in spite of this the company quite deliberately tried to use the lives of American citizens as protection for the ammunition carried, and violated the clear provisions of American laws
Department investigation later found that the *Lusitania* was carrying both contraband and ammunition—suggesting, if anything, that the United States was something more than neutral in the course of the war.\(^{424}\)

The sinking of the ship called the United States’ international reputation into question, convincing Great Britain that the United States would now enter the war.\(^{425}\) The U.S. Ambassador to the Court of St. James, Walter Hines Page, reported to Secretary of State Robert Lansing:

> Official comment is of course reticent. The freely expressed unofficial feeling is that the United States must declare war or forfeit European respect. So far as I know this opinion is universal. If the United States come in, the moral and physical effect will be to bring peace quickly and to give the United States a great influence in ending the war and in so reorganizing the world as to prevent its recurrence.\(^{426}\)

The question was thus not just one of international reputation. Equally important was the role that the United States could then play in shaping the new world order: “If the United States submits to German disregard of her citizens’ lives and of her property and of her neutral rights on the sea, the United States will have no voice or influence in settling the war nor in what follows for a long time to come.”\(^{427}\)

Herein the two epochs converged: international independence mattered. The sinking of the *Lusitania* demonstrated that the nation was not free to act as it wished internationally. But failure to act would mean that the country would miss an opportunity to shape the global environment in the aftermath of hostilities.

Ambassador Page’s remonstration failed to win the day, but it proved prescient in pinpointing U.S. interests, which eventually prevailed. President Wilson initially refused to go to war.\(^{428}\) He nonetheless went after Germany with all the diplomatic strength the country could muster, causing Secretary of State William

\(^{427}\) Id.

\(^{428}\) It was not until April 2, 1917 that President Woodrow Wilson called on Congress to declare war upon Germany—nearly two years after the sinking of the *Lusitania*. President Woodrow Wilson, Speech to Congress (Apr. 2, 1917), available at http://www.firstworldwar.com/source/usawardeclaration.htm. Four days after Wilson’s speech, the United States formally entered the war. Joint Resolution Declaring that a State of War Exists Between the Imperial German Government and the Government and the People of the United States and Making Provision to Prosecute the Same (Apr. 6, 1917), available at http://www.firstworldwar.com/source/usofficialwardeclaration.htm; see also BURTON JESSE HENDRICK ET AL., 2 THE LIFE AND LETTERS OF WALTER H. PAGE 48–49 (1922) (expressing frustration with the American inaction following the *Lusitania* incident).
Jennings Bryan to resign in protest. Germany, in response, assured the United States that it would be more careful with regard to neutrals’ rights.

By January 1917, however, the German position had changed, and a series of incidents shifted the United States’ stance. On January 31, the German Ambassador, Count Johann von Bernstorff, informed the new Secretary of State, Robert Lansing, that Germany would henceforward engage in unlimited warfare. Believing that its submarine forces were sufficient to win the war, Germany intended to bring all commerce to a halt. In March of 1917, the British government intercepted a message from the German Foreign Minister, Arthur Zimmermann, to the German Ambassador in Mexico City. The “Zimmermann Telegram,” as it came to be called, directed the Ambassador to offer U.S. territory to Mexico in return for engagement in the war.

Strictly Secret . . . We intend from the first February un-restricted U-boat war to begin stop (. ) Together war make stop (. ) Together peace stop (. ) Generous financial support and understanding our part that Mexico in Texas comma (,) New Mexico comma (,) ARIZONA former lost territory back conquer stop (.) Settlement in the details. Your Excellency to be left stop (. ) You will of the foregoing the President in strictest secrecy inform comma (,) as soon as war’s outbreak with United States certain is It will attempted by United States nevertheless neutral to keep stop (. ) In the event that this not succeed should comma (,) offer we Mexico on following terms alliance stop (. )

Obedient to your sense of duty and actuated by the highest motives, you have prepared for transmission to the German Government a note in which I cannot join without violating what I deem to be an obligation to my country, and the issue involved is of such moment that to remain a member of the Cabinet would be as unfair to you as it would be to the cause which is nearest my heart, namely, the prevention of war . . . .

American opinion shifted strongly in support of war.436

Upon taking office on March 5, 1917, President Woodrow Wilson gave voice to Ambassador Page’s previous concerns. He suggested that the United States could not avoid the impact of world war: “The war inevitably set its mark from the first alike upon our minds, our industries, our commerce, our politics and our social action. To be indifferent to it, or independent of it, was out of the question.”437 The United States had been wronged upon the seas, but had not injured in return; instead, the nation’s focus had been on “armed neutrality.”438 Eventually, however, strong economic interests drew America towards war.439 Wilson went on to articulate a set of principles that built on Washington’s articulation of international independence, yet he took it to the next step, calling for engagement to shape the global post-war environment.440 Wilson thus embraced the more forward-leaning posture articulated by Roosevelt even as he ensured that the interests of the first epoch remained protected.

Although Wilson ran on a platform of “He Kept Us Out of War” during his reelection campaign, within a month of his second inauguration, he approached Congress to request a formal declaration of war.441 Wilson appealed to the memory of noncombatants killed in the prosecution of the war, as well as Germany’s decision to target international commerce: “The present German submarine warfare against commerce,” Wilson argued, “is a warfare against mankind. It is a war against all nations.”442 The United States’ purpose, though, was not solely to

436. See id.
438. Id. (“We have been obliged to arm ourselves to make good our claim to a certain minimum of right and of freedom of action. We stand firm in armed neutrality since it seems that in no other way we can demonstrate what it is we insist upon and cannot forget.”).
439. Id. (“Our own fortunes as a nation are involved whether we would have it so or not.”).
440. Id. (“That all nations are equally interested in the peace of the world and in the political stability of free peoples, and equally responsible for their maintenance; that the essential principle of peace is the actual equality of nations in all matters of right or privilege; that peace cannot securely or justly rest upon an armed balance of power; that governments derive all their just powers from the consent of the governed and that no other powers should be supported by the common thought, purpose or power of the family of nations; that the seas should be equally free and safe for the use of all peoples, under rules set up by common agreement and consent, and that, so far as practicable, they should be accessible to all upon equal terms; that national armaments shall be limited to the necessities of national order and domestic safety; that the community of interest and of power upon which peace must henceforth depend imposes upon each nation the duty of seeing to it that all influences proceeding from its own citizens meant to encourage or assist revolution in other states should be sternly and effectually suppressed and prevented.”).
441. 55 Cong. Rec. 101, 103 (1917) (quoting President Woodrow Wilson) (“With a profound sense of the solemn and even tragical character of the step I am taking and of the grave responsibilities which it involves, but in unhesitating obedience to what I deem my constitutional duty, I advise that the Congress declare the recent course of the Imperial German Government to be in fact nothing less than war against the government and people of the United States; that it formally accept the status of belligerent which has thus been thrust upon it; and that it take immediate steps not only to put the country in a more thorough state of defense but also to exert all its power and employ all its resources to bring the Government of the German Empire to terms and end the war.”).
442. Id.
defend its interests. Ambassador Page’s remonstration resurfaced: the object would be to defeat autocratic power “and to set up amongst the really free and self-governed peoples of this world such a concert of purpose and of action as will henceforth ensure the observance of those principles.”\textsuperscript{443} The United States would act upon the international environment.

Wilson went on to lay out exactly what this would look like in a post-war world. Democratic nations would have a crucial role to play: “A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic government could be trusted to keep faith within it or observe its covenants. It must be a league of honour, a partnership of opinion . . . .”\textsuperscript{444} U.S. national security depended upon eliminating autocratic governments. That is, the national government could not act to further its basic purpose—the common defense of the members, the preservation of peace against external attacks, the regulation of commerce, and maintenance of political and commercial intercourse with foreign countries—absent a new world order.

The defining feature of this second epoch, built as a concentric circle on the first era, moved the country to a posture of formative engagement. Wilson claimed necessity in the interests of U.S. national security:

\begin{quote}
We are accepting this challenge of hostile purpose, because we know that in such a government, following such methods, we can never have a friend; and that in the presence of its [an autocratic] organized power, always lying in wait to accomplish we know not what purpose, \textit{there can be no assured security for the democratic governments of the world.}\textsuperscript{445}
\end{quote}

The fight would not be easy, but it would be instrumental in protecting “the rights and liberties of small nations” and creating “a universal dominion of right by such a concert of free peoples as shall bring peace and safety to all nations and make the world itself at last free.”\textsuperscript{446}

Thus, from the beginning of the United States’ entry into the war, Wilson made it clear that U.S. national security required the United States to take a prominent role in shaping the global post-war environment. In January 1918, Wilson usurped whatever European initiative there might have been to lead post-war discussions by announcing fourteen points on which the United States would proceed.\textsuperscript{447} A new world order would be created in accordance with U.S. interests: covenants of

\item 447. President Woodrow Wilson, President Wilson’s Fourteen Points Delivered in Joint Session (Jan. 8, 1918). The contours of the points raised by Wilson have been exhaustively studied and carefully discussed elsewhere. For our present purposes, the key point is that the Wilson Administration’s approach to the question of national security—its effort to play a more active role in shaping international relations—expanded beyond the concentric circles of the first epoch.
\end{footnotes}
peace; absolute freedom of navigation upon the seas; the removal of all economic barriers; reductions in national armaments; diminished colonial claims; evacuation of Russia, Belgium, and France; readjustment of Italy’s borders; the break-up of the Austro-Hungarian Empire; evacuation of Rumania, Serbia, and Montenegro; the dismantling of the Ottoman Empire; the establishment of an independent Poland; and the creation of a League of Nations all pointed towards a new world order.

2. Tension Between the Epochs: Independence v. Engagement

The Fourteen Points became the basis for U.S. negotiations with Germany. Nevertheless, President Wilson’s course could not be totally divorced from the key national security interests of the first epoch. Specifically, international independence, absolutely central to the administrations of Washington, Jefferson, Monroe, and others, stood in tension with Wilson’s commitment to a League of Nations. This tension undermined the Paris Peace Treaty when Wilson turned to the Senate for ratification.

The Senators’ central concern was whether the United States would be free to determine its own course in the international arena, or whether its actions would be hampered by the League.448 Senators proved reluctant to join an organization whose primary interests might be European in character.449 Reservations attached to the treaty included, inter alia: “The United States assumes no obligation to preserve the territorial integrity or political independence of any other country or to interfere in controversies between nations—whether members of the league or not—under the provisions of article 10.”450 The Senate refused to allow any questions relating to the Monroe Doctrine to be submitted to arbitration under the League of Nations.451 The Senate further objected to potentially footing the bill for an organization with interests (potentially) so different from those of the United States.452 All of these exceptions carved out for the country an independent role in the international arena, even as the United States embraced a more active global role.

As Wilson’s health failed, President Warren G. Harding came to office in 1921 with the tensions between the two epochs foremost in the public discourse. His Inaugural Address lurched between the articulations of national security. On the one hand, he invoked Washington’s legacy:

449. Accord id.
450. 58 CONG. REC. 8767, 8777 (1919) (Reservation 2).
451. See id. (Reservation 5). But see League of Nations Covenant, art. 21, available at http://avalon.law.yale.edu/20th_century/leagcov.asp (stating “Nothing in this Covenant shall be deemed to affect the validity of international engagements, such as treaties of arbitration or regional understandings like the Monroe doctrine, for securing the maintenance of peace.”).
452. 58 CONG. REC. 8767, 8777 (Reservation 9) (“The United States shall not be obligated to contribute to any expenses of the league of nations, or of the secretariat, or of any commission, etc.”).
The recorded progress of our Republic, materially and spiritually, in itself proves the wisdom of the inherited policy of noninvolvement in Old World affairs. Confident of our ability to work out our own destiny, and jealously guarding our right to do so, we seek no part in directing the destinies of the Old World. We do not mean to be entangled. We will accept no responsibility except as our own conscience and judgment, in each instance, may determine.  

But the Old World did not have a monopoly on the New World. And in this new global order, the United States would play a more formative role:

We are ready to associate ourselves with the nations of the world, great and small, for conference, for counsel; to seek the expressed views of world opinion; to recommend a way to approximate disarmament and relieve the crushing burdens of military and naval establishments. We elect to participate in suggesting plans for mediation, conciliation, and arbitration, and would gladly join in that expressed conscience of progress, which seeks to clarify and write the laws of international relationship, and establish a world court for the disposition of such justiciable questions as nations are agreed to submit thereto. In expressing aspirations, in seeking practical plans, in translating humanity’s new concept of righteousness and justice and its hatred of war into recommended action we are ready most heartily to unite, but every commitment must be made in the exercise of our national sovereignty. Since freedom impelled, and independence inspired, and nationality exalted, a world supergovernment is contrary to everything we cherish and can have no sanction by our Republic. This is not selfishness, it is sanctity. It is not aloofness, it is security.  

U.S. national security depended upon engagement that stopped short of a “world super-government.” But that very engagement departed from tradition: “We have come to a new realization,” Harding commented, “of our place in the world and a new appraisal of our Nation by the world.” America was “ready to encourage, eager to initiate, [and] anxious to participate” in any program “likely to lessen the probability of war.” The goal was nothing short of “a high place in the moral leadership of civilization . . . .” Engaging in trade for the benefit of the United States would, therefore, no longer be sufficient.

The practical manifestation of this approach came in the form of a series of agreements. The Four-Power Pact would henceforward govern altercations in the

Pacific. The Kellogg-Briand Pact, initiated by France, quickly bound other major powers to “condemn recourse to war for the solution of international controversies, and renounce it as an instrument of national policy in their relations with one another.” The settlement “of all disputes or conflicts of whatever nature or of whatever origin they may be, which may arise among them” would never be sought “except by pacific means.” In 1936, Secretary Hull suggested that the very purpose of the Inter-American Peace Conference was to “banish war from the Western Hemisphere.”

The League of Nations might be looked to as a solution to international conflict. Indeed, the Lytton Commission (unsuccessfully) attempted to intervene in 1932 when the Japanese Army in Manchuria attacked Chang Hsueh-Liang, allied with Chiang Kai-shek. But the failure of international institutions did not mean that the United States’ hands were subsequently tied. The country would continue to protect its economic interests through forward engagement—militarily if necessary. With the Fourth Marine Regiment stationed in China, the Stimson Doctrine—established by Secretary of State Henry Stimson in diplomatic notes sent to both Japan and China—followed the course first enunciated by John Hay in 1899. It announced that the U.S. government would not recognize as legally binding any de facto situation, nor any treaty or agreement entered into between Japan and China “which may impair the treaty rights of the United States or its citizens in China, including those which relate to the sovereignty, the independence, or the territorial and administrative integrity of the Republic of China.” Secretary Stimson subsequently sent a letter to the Chairman of the Foreign Relations Committee, noting the two principles invoked by Hay: “(1) equality of commercial opportunity among all nations in dealing with China, and (2) as necessary to that equality the preservation of China’s territorial and administrative integrity.”

In this picture, domestic concerns still mattered. Harding stated, “I wish for an America no less alert in guarding against dangers from within than it is watchful

against enemies from without.” The concerns that stemmed from industrialization had not abated. “My most reverent prayer for America is for industrial peace, with its rewards, widely and generally distributed, amid the inspirations of equal opportunity.” Here, the Great Depression may have masked the growing power of corporate entities, but concerns about the role played by business continued—with respect to the munitions industry. In 1936, Senator Gerald P. Nye chaired a Special Committee on the Investigation of the Munitions Industry, which focused on the role played by military companies in the buildup to World War I. The Committee found “that almost without exception, the American munitions companies investigated have at times resorted to such unusual approaches . . . as to constitute, in effect, a form of bribery of foreign governmental officials or of their close friends in order to secure business.” The Committee further determined, “that not only are such transactions highly unethical, but that they carry within themselves the seeds of disturbance of the peace and stability of those nations in which they take place.” Nye’s Committee charged munitions companies with weakening democratic government and threatening the peace and civic process of nations.

Scholars have looked at this period and suggested that, as a matter of international relations, it is marked by increasing American isolationism. Professor John Lewis Gaddis, for instance, posits that prior to World War II:

> [M]ost Americans believed that their country could best protect itself by minimizing political entanglements overseas. Events of 1939–40 persuaded leaders of the Roosevelt Administration that they had been wrong; Pearl Harbor convinced remaining skeptics. From then on, American policy-makers would seek security through involvement, not isolation: to prevent new wars, they believed, the whole system of relations between nations would have to be reformed.

What is missed in this analysis and similar accounts are, first, the extent to which the United States was already engaged in a formative role, and, second, the degree to which national security concerns operated at a domestic level.

On the first point, there is certainly no shortage of military interventions in the first three decades of the twentieth century. Salient examples include: three occupations of Cuba; several decade-long occupations of Haiti, Santo Domingo, and Nicaragua (twenty-four years in the last case); intervention in Mexico;

---

468. Id.
470. Id.
471. Id. at 4.
involvement in Venezuela; and military support to the rebellion that led to the creation of Panama in 1904.

As for the second point, this era could equally be looked at through a lens of congressional efforts to restrict executive branch latitude as well as the undue influence of corporate entities within the national security arena. It is not that the United States was not engaged overseas; to the contrary, since the Spanish-American War it had adopted a policy of formative international engagement. The crafting of arbitration agreements, the negotiation of instruments designed to address international conflict, the creation of the League of Nations, and continued efforts to shape trade agreements demonstrated the United States’ willingness to shape the international environment. This is distinguishable from the country’s reluctance to commit itself to the binding decisions of international bodies.

The battle over the League of Nations has thus widely been interpreted as a symbol of American isolationism. But it can equally be regarded as a product of domestic conflict over the exercise of power with regard to U.S. national security. It is not the only example.

Consider, for instance, the Neutrality Acts, enacted between 1935 and 1937. These statutes undermined President Franklin D. Roosevelt’s ability to assist the United Kingdom in the face of German aggression. The first such measure, of August 1935, required the President to proclaim any outbreak of war; it also prevented any export of arms, or ammunition to any named belligerent states. Roosevelt signed the legislation and later invoked it in the Second Italo-Abyssinian War (Italy invaded Ethiopia in October 1935). Nonetheless, he memorialized his objections in a signing statement: “It is the policy of this Government,” he wrote, “to avoid being drawn into wars between other nations, but it is a fact that no Congress and no Executive can foresee all possible future situations . . . . It is conceivable that . . . the inflexible provisions might drag us into war instead of keeping us out.” The President chafed at having his hands tied by Congress. Roosevelt reiterated his commitment to the principles of the first epoch: “The policy of the Government is definitely committed to the maintenance of peace and the avoidance of any entanglements which would lead us into conflict.”

Congress continued to insert itself into commercial affairs related to war. In February 1936, the Second Neutrality Act forbade loans to belligerents. The Third Neutrality Act of January 1937 embargoed shipments to belligerents in the

476. Id. at 346.
Spanish Civil War.\textsuperscript{478} The Fourth Neutrality Act, passed in May 1937, allowed for non-munitions trade for two years, as long as the goods were not carried in American ships.\textsuperscript{479} The Fifth Neutrality Act, entered into force after the Second World War had begun, limited all trade with belligerents named by the President via proclamation.\textsuperscript{480}

Each of these measures placed Congress in a prominent role with regard to U.S. national security. Each of the measures restricted the executive branch’s sphere of influence and freedom of action. And each of the measures granted Congress greater control over the munitions industry.

3. Expanding National Spheres of Influence

During the second epoch, as a matter of national security, direct confrontation between corporate power and state authority generated federal responses couched in a national security framework. One example, provided above, was the use of the military to respond to the Chicago strikes.\textsuperscript{481} The federal government overrode state objection to the use of troops, on the grounds that federal interests, powers, and duties required federal action.\textsuperscript{482} Industrialization and urbanization brought more, however, than just direct power confrontations between corporate interests and the federal government. It also brought a host of social and economic concerns, which the states appeared unable to alleviate, following the stock market crash of 1929.\textsuperscript{483} The federal government began to respond: Hoover thus marked 1929 with a report on recent social trends.\textsuperscript{484} And Roosevelt’s New Deal ushered in a new era.\textsuperscript{485}

Between 1930 and 1940, federal involvement in social welfare programs radically expanded.\textsuperscript{486} From merely $21 million spent on public aid programs in 1913, by 1932, the total federal outlays had risen to $208 million. By 1939, this number had skyrocketed to $4.9 billion.\textsuperscript{487} Whereas federal public-aid in 1913 and

\item \textsuperscript{487} Id. at 7–8.
\end{itemize}
1923 amounted to less than 1 percent of all governmental expenditures, the proportion increased to 6.5 percent in 1933, and to 27.1 percent in 1939.\footnote{488} Not only did public-aid outlays substantially increase, but the type of public relief provided rapidly expanded. By 1940, public relief no longer consisted solely of providing income to needy persons, but also included: programs ranging from education and vocational guidance to the provision of roads, schools, and other public buildings; public conservation efforts; recreational facilities; expanded nursing and medical assistance; and economic and social assistance programs.\footnote{489} Concepts of need-based assistance broadened. The system no longer responded only to those who were utterly destitute; it anticipated potential problems by investing in social insurance.\footnote{490} By the 1940s, so many changes had occurred that the government agency tasked with anticipating and considering relief programs called for such support to henceforth be termed “public aid.”\footnote{491}

These programs had a significant domestic impact.\footnote{492} In 1942, the National Resources Planning Board found that between 1933 and 1940, ten to twenty-two percent of the total population at any one time depended on socially provided income.\footnote{493} Public health, education, child welfare services, and public housing became enmeshed in the federal portfolio.

Notably, social security was different from national security. Both were within federal purview. And both received attention. Personal security also rose to the fore, spurring the federal government to become more involved in the criminal law realm. The Eighteenth Amendment played a pivotal role.\footnote{494}

The prohibition of alcohol brought with it a booming trade in illegal goods, ushering in the conditions ripe for criminal enterprise. Cosa Nostra, for instance, was present in the United States since the late nineteenth century;\footnote{495} however, it wasn’t until Prohibition that it gained significant power in American cities.\footnote{496} Profits from the illegal sale of alcohol became the group’s main source of income—significantly overshadowing earnings made from prostitution, gambling, and racketeering schemes.\footnote{497} Small-time gangsters like Al Capone, Meyer Lansky,

Prohibition proved a double-edged sword: not only did it give rise to conditions ripe for abuse, but the manner in which it was enforced left much to be desired. As one account notes, “Over-zealous police and federal agents violated civil rights when searching for and destroying the paraphernalia of alcohol.”\footnote{Notes on the Amendments to the U.S. Constitution, U.S. Const. Online, http://www.usconstitution.net/const.html#Am18 (last visited Mar. 15, 2012).} The frequency of such raids underscored libertarians’ concerns about federal government overreaching, heightened all the more because the Eighteenth Amendment was only the second amendment to directly affect the private rights of citizens.\footnote{The other notable amendment with a direct impact on private rights was the Thirteenth Amendment, which abolished slavery and gave Congress the power to pass legislation preventing slavery and involuntary servitude. U.S. Const. amend. XIII.} If private rights fell beyond federal authority, efforts to restrict such liberties raised question about the rule of law.

Upon assuming office, President Herbert Hoover underscored the growing concern:

> The most malign of all [the] dangers [facing self-government] today is disregard and disobedience of law. Crime is increasing. Confidence in rigid and speedy justice is decreasing. I am not prepared to believe that this indicates any decay in the moral fiber of the American people. I am not prepared to believe that it indicates an impotence of the Federal Government to enforce its laws.\footnote{Hoover, supra note 137, at 257–68.}

To remedy the problem, the national government would have to take a more active role. In 1933, Congress passed a new measure to eliminate loopholes in criminal procedure.\footnote{Act of Feb. 24, 1933, ch. 119, 47 Stat. 904 (giving the Supreme Court the authority to prescribe rules of practice and procedure in criminal cases) (repealed 1988).} President Hoover issued a signing statement coincident with the bill’s passage, pointing out that the legislation represented four years of recommendations made by the President and the Attorney General.\footnote{See President Herbert Hoover, Presidential Statement on Signing an Act on Reform of Criminal Procedures in Federal Courts (Feb. 25, 1933), available at http://www.presidency.ucsb.edu/ws/index.php?pid=23438#axzz1pILWZj3L.} It tied directly to his efforts to crack down on crime: “[This legislation] should prevent well-endowed
criminals, who have been convicted by juries, from delaying punishment by years of resort to sharp technicalities of judicial procedure. It will,” he concluded, “increase the respect for law.”

The realm of criminal law therefore laid side-by-side with the national government’s concerns about social security, economic security, and national security. Together these issues comprised some of the most important spheres of national influence. The rise of authoritarian governments abroad, however, lent energy to the national security concerns. For many, the question of national security was not one amongst various competing issues; it was quickly becoming the defining feature of the generation.

William Yandell Elliott, a professor of government at Harvard University, chose this moment to publish a program for U.S. national security. He called for a constitutional overhaul, in which the executive would be given greater powers and more latitude in the field of foreign relations: “In order to achieve the recovery which will once more afford social and national security,” he wrote, “we must go to the roots of our problems: political reform is essential for security at home and abroad.” Subjecting treaties to the scrutiny of the Senate was part of the problem:

We have a national inferiority complex of the most painful type on all questions dealing with foreigners. The result is that by keeping at least one hand of the Executive always handcuffed to a minority of the Senate we make it impossible for our negotiators to deal on equal terms and with foresight. It is, and will remain, impossible to have an intelligence foreign policy until Mr. Roosevelt and his Secretary of State are given freer hands to deal with our foreign problems. This means as much power to negotiate war-debts settlements as to make tariff bargains—with a wide discretionary latitude for concessions.

Elliott derided the Senate’s refusal to try to act through the League of Nations:

This is again the age of Machiavelli. Japan, Germany, Italy, these countries make small pretense to any other policy than that of craft and might in gaining

506. Id.
507. I use the term “authoritarian” to denote regimes in which single entities hold a monopoly on political power. This type of political structure can be distinguished from “totalitarianism,” in which other spheres, such as education, science, and the arts, become controlled by the individual or group holding a monopoly on political power, consistent with a formally recognized ideological perspective. Concerns about the latter form of political and social organization emerged with growing efforts to find parallels between communism and fascism. See Lowell Barrington et al., Comparative Politics: Structures and Choices 195–97 (Carolyn Merrill et al. eds., 2009).

national ends. Others who profess peace are pursuing ends that may lead to war. So far the policy of the United States has been to avoid war. But we are unwilling to attempt any participation in a system that would try to guarantee security.\textsuperscript{511}

As a domestic matter, \textit{security} trumped \textit{economic equality}.\textsuperscript{512} For the former, economic vitality and a positive balance of trade would prove essential. Elliott, here, consciously or not, was hearkening back to the first epoch, wherein economic growth proved central. France and Japan, he pointed out, had been most forthright in admitting the importance of economic strength and a positive trade balance: “War must not find them unprepared in industry, raw materials, or food stuffs, any more than in armaments. And as gold and financial power are equally important sinews of war, every state begins to adopt a mercantilist attitude toward its trade balance.”\textsuperscript{513} The rejection of foreign capital and sources of supply lay at the heart of U.S. national security.\textsuperscript{514} For increasingly complex systems, Elliott hypothesized, more centralized solutions may be required.\textsuperscript{515}

One year later, Edward Pendleton Herring, also a professor at Harvard University (later President of the American Social Science Research Council), argued an even more extreme position.\textsuperscript{516} For Pendleton Herring, democratic countries were losing ground to authoritarian regimes, which were more effective at exploiting new technologies.\textsuperscript{517} He argued that if the United States employed sophisticated management science techniques, it could gain a commensurate level of control without relinquishing American values.\textsuperscript{518} The country would have to eliminate special interests, instead promoting the state “over and above the purposes of the medley of interests that compose it.”\textsuperscript{519} His approach was a direct attack on the structure of parallel interests that characterized federal power at the time.

Pendleton Herring, like Elliott, prioritized U.S. national security above other interests: “Air power means that the globe has shrunk. Mechanized warfare means that armies of industry are in conflict. . . . The margins of safety that our

\textsuperscript{518} tion.”).
\textsuperscript{519} Edward Pendleton Herring, Public Administration and the Public Interest 380 (1936).
democracy has known have been cut away.”520 The United States must return to the Founding, “when the flintlock hung over every hearth and the powder horn was kept ready.”521 Importantly, Pendleton Herring’s reference to the early years of the country focused not on the form U.S. national security had taken at that time—with preservation of the Union a primary matter, and international independence and economic growth as a second—but merely on the fact that overriding national security concerns had set the political, economic, and military agendas.

New technologies underscored Pendleton Herring’s concerns: advances in transportation, communication, and the lethality of weapons again created an instable world. Powerful European actors could no longer be kept at bay simply by distance. It was thus not just the passive retention of colonial possessions that was at stake, as it had been at the Founding, but the aggressive posture of autocratic governments, intent on expanding their sphere of influence, that posed a threat. The October Revolution produced a Stalinist regime, bent on global dominance.522 Benito Mussolini’s fascist regime in Italy emphasized military might and embraced expansionism.523 The rise of the Third Reich from 1933 similarly conveyed military aggression, such as the German government’s decisions to withdraw from the League of Nations, reject the Treaty of Versailles, and engage in re-armament.524

Western governments, including the United States, looked at these developments overseas and debated how to best respond to the threat. Calls by Elliott, Pendleton Herring, and others to centralize the national response, and to take steps towards ever-greater control against autocratic regimes fell on fertile ground. In 1937, Harold Laski, professor of political science at the London School of Economics, and a frequent public lecturer in the United States, gave voice to concern about such shifts in the modern state: “In the seven years since this book was first published the condition of liberty has visibly deteriorated over most of the civilized world . . . . At times it seems not improbable that mankind is about to enter a new dark age.”525

Even as authoritarian governments grew in strength, the doctrines embraced by autocratic States abroad diminished support for the other domestic spheres of influence. Eugene Debs, for instance, led the Socialist Party in the United States—a doctrine to which he converted while serving jail time for his role in the

Pullman strikes. In 1912, he ran for President on the Socialist ticket, in the process earning more than 900,000 votes—six percent of the votes cast that year. He opposed the United States’ involvement in World War I—a position that quickly became seen as a threat to national security. The Espionage Act of 1917, followed by the Sedition Act of 1918, targeted interference with the draft and other wartime policies, as well as any utterance of “disloyal or abusive language” about the government, the Constitution, the U.S. flag, or even the military uniform. As Vladimir Lenin and the Bolsheviks seized power in Russia, fear of imminent revolution in America spread. The Red Scare soon found Debs, along with nearly 1500 others, imprisoned.

In light of the fear of communism—particularly as practiced by the U.S.S.R.—that subsequently swept the United States, federal involvement in social and economic security raised the specter of socialism. A sort of heightened awareness of—and concern about—its creeping influence grew. In 1944, Friedrich A. Hayek published _The Road to Serfdom_, warning that federal programs were beginning to assume a socialist character. Hayek cited the New Deal, as well as the Fair Deal Administrations of Presidents Franklin D. Roosevelt and Harry S. Truman, as examples. Social programs gradually fell from favor, sped by the Cold War and the fear generated by McCarthyism.

In this manner, government designs on private industry became unpalatable. Instead, where industry might be essential to U.S. national security, a partnership between the United States and private industry provided a more acceptable route. This represented a very different approach than that which had been adopted during the Pullman strikes, when industry and the federal government were at loggerheads. It also presented a very different picture than that in which social and economic security raised the specter of socialism. A sort of heightened awareness of—and concern about—its creeping influence grew. In 1944, Friedrich A. economic security represented just one of many spheres of national influence. Instead, national security would become dominant, with industry one way to ensure the protection of U.S. interests both at home and overseas. Thus entered the third epoch.

Prior to the Second World War, the values of the first epoch resurfaced: primarily, protection of the Union and, secondarily, international independence and economic growth. Strains of the second epoch also continued to shape U.S. conceptions of national security. The United States now considered itself a major international player and sought to influence the global course of events, not just through continued insistence on the Monroe Doctrine and Roosevelt’s Corollary, but through military engagement. In addition to these basic approaches to U.S. national security, though, a third concentric circle emerged, wherein national security began to dominate other federal spheres of influence. Social and economic security, as well as personal security (as manifested via law enforcement) became subservient to overriding national security interests. Significantly, this shift occurred outside of active military hostilities, cementing the nation into a permanent condition of emergency.

In this context, the federal government could ill afford to alienate corporate interests; instead, it co-opted industry into the national security infrastructure. While not without its own risks, such a move was seen as imperative to counter the threat posed initially by autocratic governments and, later, more directly, by the Soviet Union. For the third epoch took hold not with World War II, but with the early 1930s rise of totalitarianism and fascist corporatism, wherein those holding a monopoly on political power sought to control the evolution of education, science, the economy, and the arts in a manner consistent with the dominant political ideology. The linkage between communism and fascism as totalitarian regimes, in the context of aggressor nations, presented an existential threat. World War II acted as a lens, focusing the national security infrastructure on one dominant aim: containment of the U.S.S.R. From the beginning, this epoch was marked by a blurring of the line between foreign and domestic. Threats to the national government could arise from either quarter.

The third epoch instituted a Manichean worldview, wherein “good” fought “bad.” The evils of autocracy morphed into the evils of totalitarianism and, finally, Soviet communism. Democracy, in contrast, stood for good. National security became more than protecting the Union and establishing international independence; it became a matter of moral superiority. President Dwight D. Eisenhower thus remarked in his First Inaugural Address, “Freedom is pitted against slavery;
lightness against the dark.”  Just over a decade later, Ronald Reagan referred to the threat posed by the Soviet Union: “We are faced with the most evil enemy mankind has known in his long climb from the swamp to the stars. There can be no security anywhere in the free world if there is no fiscal and economic stability within the United States.” In 1982, Reagan reiterated this worldview, telling the British House of Commons that the “forces of good ultimately rally and triumph over evil.”

Like the second age, the third epoch gave rise to tension with the aims of the first. Specifically, the basic understanding of national security as stemming from the protection of the U.S. Constitution, and the people as sovereign appeared to be violated by actions taken by the executive branch precisely in the name of national security. The McCarthy era and the Church Committee that followed may thus be seen as flip sides of the same coin: both responded to perceived threats to the same underlying U.S. interests. And both, in turn, became seen as a threat to the same. Together, they reflect a remarkably consistent take on the primary aims of U.S. national security that have persisted since the Founding.

1. A New Domestic Order

The rise of totalitarianism in the 1930s shifted American thinking about what steps would have to be taken to ensure U.S. national security. A new domestic order characterized by a stronger military base and an overriding focus on national security concerns emerged.

Having urged Congress to maintain American neutrality, Roosevelt announced one year later that he had forged an executive agreement to trade fifty destroyers for bases in British possessions in the New World. “We have,” he stated, “certain ideas and ideals of national safety, and we must act to preserve that safety today and to preserve the safety of our children in future years.”

Echoes of the second epoch reverberated: U.S. national security was bound up with the safety of
the Western Hemisphere and the surrounding oceans.\footnote{540} The Monroe Doctrine bore a close relationship to the course set by the Founders, with its essential aim of avoiding European entanglements:

We seek to keep war from our firesides by keeping war from coming back to the Americas. For that we have historic precedent that goes back to the days of the administration of President George Washington. . . . It is our national duty to use every effort to keep [the wars on other continents] out of the Americas.\footnote{541}

Roosevelt considered his decision to trade destroyers for bases in Newfoundland, the islands of Bermuda, the Bahamas, Jamaica, St. Lucia, Trinidad, Antigua, and British Guiana to be the most important action in the reinforcement of the United States’ national defense since the Louisiana Purchase: “Then as now,” he said, “considerations of safety from overseas attack were fundamental. The value to the Western Hemisphere of these outposts of security is beyond calculation.”\footnote{542} The United States could no longer afford to see itself as “remote and isolated and, therefore, secure against the dangers from which no other land is free.”\footnote{543} The decision also completed the process of removing the Caribbean from European influence, in this case removing the world’s largest navy from the so-called “American lake.”\footnote{544}

Rapid mobilization followed. The Army swelled from 174,000 soldiers in 1940 to 1.4 million.\footnote{545} The military began building munitions plants, with 375 major projects completed by the time Congress declared war and another 320 underway.\footnote{546} In 1945, Congress increased defense authorizations to $17 billion—nine times the amount granted in the previous year.\footnote{547}

Expansion of the United States’ military intelligence infrastructure and capabilities accompanied the military buildup. Roosevelt created the Office of the Coordinator of Information to ensure that the Army and Navy exchanged information.\footnote{548} Whether this effort was successful is open to question. Nonetheless, as a formal matter, it required that “[t]he several departments and agencies of the government shall make available to the Coordinator of Information all and any

such information and data relating to national security as the Coordinator, with the approval of the President, may from time to time request.” Further reorganization of military intelligence led to the creation of a separate Military Intelligence Service, which included an Administrative Group, an Intelligence Group, a Counterintelligence Group, and an Operations Group. Increasing emphasis on signals intelligence paralleled broader efforts to disseminate and make use of information thus obtained.

The need to obtain more information through intelligence operations was not limited to the overseas arena. Ideas recognized neither distance nor geopolitical borders. “Today’s threat to our national security,” Roosevelt announced, “is not a matter of military weapons alone. We know of (new) other methods, new methods of attack. The Trojan Horse. The Fifth Column that betrays a nation unprepared for treachery.” According to the President, Spies, saboteurs and traitors are the actors in this new strategy. With all of these we must and will deal vigorously. But there is an added technique for weakening a nation at its very roots, for disrupting the entire pattern of life of a people. And it is important that we understand it. The method is simple. It is, first, discord, a dissemination of discord . . . . The aim . . . is to create confusion of counsel, public indecision, political paralysis and eventually, a state of panic.

The problem, then, was not just overseas: it was inside the country as well. By questioning national policies, foreign agents could sow seeds of discontent:

Singleness of national purpose may be undermined. Men can lose confidence in each other, and therefore lose confidence in the efficacy of their own united action. Faith and courage can yield to doubt and fear. The unity of the state (is) can be so sapped that its strength is destroyed.

This was no idle concern: for Roosevelt, foreign intrigue had been weakening American resolve for the past two years, as agents infiltrated domestic bounds.

a. Re-channeling of Law Enforcement to National Security

To respond to the domestic threat, Roosevelt instructed the War Department and the Navy to coordinate intelligence gathering with the Federal Bureau of Investigation (“FBI”).\(^{556}\) The FBI was to be given all data, information, and material relating either directly or indirectly to espionage, counterespionage, or sabotage.\(^{557}\) This did not mean that the State Department’s intelligence gathering would cease; to the contrary, in memoranda to Secretary of State Cordell Hull, Roosevelt directed such activities to continue.\(^{558}\) However, it did place a priority on the military and law enforcement agencies, with all information subsequently forwarded to the directors of the three organizations.\(^{559}\)

These shifts demonstrated the growing institutional dominance of national security concerns, particularly with regard to the FBI—an organization hitherto concentrated on personal security and criminal activity.\(^{560}\) Henceforward, the Bureau would assume national security responsibilities.\(^{561}\)

State law enforcement interests mirrored those of the federal agency.\(^{562}\) The New York City Police Department, for instance, created a special sabotage squad and planned to later expand it to 150 officers.\(^{563}\) Such actions, however, posed a direct threat to the FBI’s control, raising concerns about the federal government’s dominance in the field.\(^{564}\) As a result, FBI Director J. Edgar Hoover convinced the Attorney General to draft a document directing police officials to turn over to the FBI “any information obtained pertaining to espionage, counterespionage, sabotage, and neutrality regulations.”\(^{565}\) The President subsequently issued an Execu-
tive Order requesting that all law enforcement officers promptly yield the relevant information.\footnote{566} Soon thereafter, Roosevelt proclaimed a national emergency “in connection with and to the extent necessary for the proper observance, safeguarding, and enforcing of the neutrality of the United States and the strengthening of our national defense within the limits of peacetime authorizations.”\footnote{567} He simultaneously issued an Executive Order expanding the number of persons assigned to the FBI to ensure that the Bureau could perform its national security functions.\footnote{568} Although Roosevelt never formally authorized either the FBI or military intelligence to perform domestic intelligence investigations of subversive activities (the written records being limited to espionage, sabotage, and violations of the neutrality regulations), the Church Committee later found that he clearly knew about, and informally approved, the broad subversive investigations being carried out by the Bureau.\footnote{569}

Congress acquiesced to the FBI’s expanded role, considering it a necessary response to the national emergency.\footnote{570} The legislature’s attention to the matter extended beyond formally blessing the FBI’s new mandate through appropriations. Immigration Act amendments would have deported individuals for affiliating with Communist groups.\footnote{571} In 1939, the Supreme Court ruled that the amendments were not retroactive\footnote{572} —a loophole Congress closed the following year.\footnote{573} The Smith Act made it a federal crime to advocate for the violent overthrow of the United States government; it also outlawed encouraging military insubordination.\footnote{574} Within four months, more than 4.7 million aliens had been registered under

the statute.” The Commission on Government Security later reported: “From its inception [the Smith Act] was intended to combat and resist the organization of Fascist and communist groups owing allegiance to foreign governments whose operations and activities were clearly contrary and dangerous to the Government of the United States.”

The fact that such a measure had been enacted outside of actual war was highly unusual. Harvard law professor Zechariah Chaffee described the statute at the time as incorporating “the most drastic restrictions on freedom of speech ever enacted in the United States during peace.”

While Chaffee was correct, the statute also reflected the evolution of U.S. national security. Specifically, it echoed the Founding generation’s concern about maintaining the government of the United States against attack. Roosevelt consciously hearkened back to the Founding, reinforcing the priority accorded to U.S. national security. On December 29, 1940, he began his weekly radio address saying,

This is not a fireside chat on war. It is a talk on national security, because the nub of the whole purpose of your President is to keep you now, and your children later, and your grandchildren much later, out of a last-ditch war for the preservation of American independence and all of the things that American independence means to you and to me and to ours.

He postulated that not since Jamestown and Plymouth Rock had such dangers loomed. Foremost amongst Roosevelt’s concerns was the aggressive nature of the enemy: “[T]he Axis proclams,” Roosevelt said, “that there can be no ultimate peace between their philosophy of government and our philosophy of government.”

This, then, was an even direr situation than that which confronted the Founders. At that time, the primary aim had been to avoid entanglement in European affairs. Now, however, unrestrained aggressor-nations sought to conquer the world. Should America’s friends in Europe fail to contain totalitarianism—particularly the racist and fascist regimes of Hitler and Mussolini—a new and terrible era would emerge, “in which the whole world, our hemisphere included, would be run by threats of brute force. [And] to survive in such a world, we would have to convert ourselves permanently into a militaristic power on the basis of war

economy.” 582 Even as he spoke, Roosevelt stated, spies and saboteurs had infiltrated the domestic fabric, seeking to sow seeds of disunity. 583

Congress shared the President’s concerns. Soon after Roosevelt’s address, the Voorhis Act of 1941 required the registration of all “subversive” organizations with foreign attachments that recommended the overthrow of the government. 584 Passed with minimal debate and even less publicity, the Voorhis Act was incorporated into the Alien Registration Act of 1940. 585 The Foreign Agents Registration Act of 1938, 586 in turn, grew out of the investigation of Communist and pro-Nazi organizations by the Special House Committee on Un-American Activities, which conducted its operations between 1935 and 1936. 587

Collectively, these measures underscored the concern not only that saboteurs had infiltrated U.S. shores, but also that American citizens with disparate political views threatened U.S. national security—the security of the institution of federal government and the constitutional structure safeguarded by the Union. To the extent that a “Fifth Column,” as referenced by Attorney General Jackson in 1940 (and used by Roosevelt during his May 26, 1940 fireside chat), 588 might infiltrate the existing political structures, extraordinary steps had to be taken. Of central importance was the collection of pure as well as preventive intelligence—the former centered on investigations of current threats and the latter on the accumulation of information for use in the event of an emergency or actual war. 589

Subversive activities, investigations, and surveillance measures implemented by the FBI have been well-documented elsewhere. 590 It is not the purpose of this Article to re-examine these accounts. For present purposes, the salient question is: What was driving U.S. national security concerns, and what form did U.S. interests take in terms of law and policy? It appears that what was happening at the time was a retreat to the core national security concerns of the first epoch—protecting the existence of the political institutions and the constitutional structure of the national government. What made the third epoch different was the prioritization of core national security concerns in response to political ideology, as opposed to active

military hostility.

It could be argued that during the French Revolution, the Alien and Sedition Acts represented a similar approach in that the country was concerned about the transfer of European revolution within domestic bounds. To some extent, this may have been true; but the centralization, militarization, and expansion of the national security infrastructure in the third epoch significantly overshadowed movement in this direction during the first era. This corresponded to the perceived threat: ideology proved ubiquitous and intimately linked to civil society. Hoover declared in 1940 that those advocating foreign “isms” had “succeeded in boring into every phase of American life, masquerading behind front organizations.”

b. The Threat of Totalitarianism

At his Third Inaugural Address, Roosevelt summarized the dominant national security issues of the ages:

In Washington’s day the task of the people was to create and weld together a nation. In Lincoln’s day the task of the people was to preserve that Nation from disruption from within. In this day the task of the people is to save that Nation and its institutions from disruption from without.

The United States again faced an existential threat. As a result, the primary interests of the first epoch returned. Roosevelt hearkened back to Washington’s First Inaugural Address in 1789, explaining that democracy itself, and the republican model of government entrusted to the United States, was in danger. The liberties the United States would seek would ensure the survival of the political framework on which the country was built. Just a fortnight before his address, Roosevelt laid out the four freedoms,

In the future days, which we seek to make secure, we look forward to a world founded upon four essential human freedoms. The first is freedom of speech and expression—everywhere in the world. The second is freedom of every person to worship God in his own way—everywhere in the world. The third is freedom from want . . . —everywhere in the world. The fourth is freedom from fear—which, translated into world terms, means a world-wide reduction of armaments to such a point and in such a thorough fashion that no nation will be

in a position to commit an act of physical aggression against any neighbor— anywhere in the world.\footnote{594} The Atlantic Charter in August 1941 picked up the themes: self-determination; free trade; improved labor standards; an end to “Nazi tyranny,” and its replacement with world peace; freedom of navigation on the high seas; and the disarmament of nations threatening aggression.\footnote{595} These would be the aims of the allied nations.\footnote{596} The United States could now count itself amongst the allied countries, for with the Lend-Lease Act of March 1941, the country essentially became an undeclared belligerent.\footnote{597} The statute authorized the Secretary of War to manufacture armaments and then sell, exchange, lease, or lend them to allies.\footnote{598} Carefully calculated to ensure U.S. national security, the statute widened the government’s commitments to the allied nations.

c. The Purpose of the State

The United States prepared for war. Rapid mobilization was met by statutory language giving the President the latitude to assist allied countries in their battle against totalitarianism. The aggression of autocratic governments threatened the United States. What role, then, ought the federal government perform in responding to such threats?

The answer, for Edward Pendleton Herring, was clear: the very purpose of the federal government was to protect national security.\footnote{599} In 1941, he argued that advances in technology (i.e., airplanes) and political developments (i.e., the expansion of totalitarianism) had converged, presenting a new and existential threat to the United States.\footnote{600} Correspondingly extreme shifts in the American attitude towards government and society would have to follow. The United States must now “give thought to the possibility of adapting our governmental institutions to the maintenance of a powerful military force as part of the normal structure of our society.”\footnote{601} Americans would simply have to get over their aversion to a militarized state. Even after the emergency passed, emphasis on arms would have to continue: “[T]he Roman phalanx,” Pendleton Herring reflected, “was a necessary preliminary to the Pax Romana.”\footnote{602} The way to deter attack was through

\footnote{601}{Id. at 2.}
\footnote{602}{Id. at 243.}
military might. For the foreseeable future, the United States would have to maintain a strong army to stave off the totalitarian threat.

Even more controversially, Pendleton Herring called for giving soldiers an influential role in U.S. foreign policy. In confronting totalitarianism, moreover, the United States would have to become more centralized and its economy standardized. Arguing (unconvincingly) that no constitutional risks would ensue, Pendleton Herring nevertheless seemed willing to accept the consequences. He was not alone in calling for a more centralized governmental structure to offset the threat posed by totalitarianism. But such calls gave rise to concern.

Professor Harold Lasswell, a prominent sociologist at Yale Law School, recognized that Russian communism posed a threat to U.S. national security. But, he warned, reaction to one danger could create another—namely, a garrison-police state. Lasswell sketched the contours of such a state: declining access to information, increasing suspicion and intolerance, declining civilian authority, and ascendance of the military. Specialization shifted the emphasis “toward the supremacy of the specialist on violence, the soldier.” Authority, under this model, would become “dictatorial, governmentalized, centralized, and integrated.”

In the midst of this conversation, Pearl Harbor suddenly and violently vindicated Pendleton Herring’s position. Aerial combat meant that the United States could not depend upon its physical distance from other countries to protect itself. Simultaneously, a more centralized structure might allow the country to better coordinate its military, intelligence, and other national security functions. Professor Douglas T. Stuart at Dickinson College wrote, “The fact that America could be

612. Id. Lasswell’s calls became more urgent following World War II. See Harold Lasswell, NATIONAL SECURITY AND INDIVIDUAL FREEDOM (1950).
613. President’s Request to Congress for a Declaration of War, in 2 FOREIGN RELATIONS OF THE UNITED STATES: JAPAN, 1931–1941, at 793–94 (1943); see also Stuart, supra note 13, at 40 (“Pearl Harbor seemed to confirm all of the major elements of Herring’s prewar national security argument: America’s new situation geostrategic vulnerability; the need for military preparedness before a war breaks out; the unique threat posed by dictatorships; and the need to both expand and centralize the US government in order to remain competitive.”).
directly attacked from a distance of nearly 4,000 miles did not just ‘sweep away old conceptions of national security’; it *established* the concept of national security as the unchallengeable standard against which all future foreign policy decisions were to be made.614 For Stuart, it prioritized the question of national security, shifting the postwar debate from a fight between different approaches to the question, to an effort to negotiate how to shape American values to its national security interests—the latter being non-negotiable.615

Although I place more emphasis on the priority accorded national security prior to Pearl Harbor, Stuart’s reading with regard to vindicating Pendleton Herring’s position is correct. World War II subsequently became a testing ground for the creation of institutions and procedures that would ensure civilian-military cooperation, intelligence-gathering and dissemination, and inter-service policy coordination. The only piece of Pendleton Herring’s advocacy that dropped from the picture was control of the economy.616 As Stuart has noted, removing constraints on corporate entities would be preferable so long as a high level of preparedness could be maintained—with respect to weapons, technology, and scientific advances.617 To paraphrase Dean Acheson, the Secretary of State at the time, the United States could only afford to be wrong once.618

The creation of the Joint Chiefs of Staff sought to ensure not just civilian-military cooperation, but inter-service coordination. The British model proved instructive. From December 1941 to January 1942, the United States was in close contact with the United Kingdom.619 At the Arcadia Conference, the British Chiefs of Staff stood as a unit, offering the Prime Minister a consensus on matters of military importance.620 In these meetings, the Royal Air Force also had a voice.621 The first meeting of the U.S. Joint Chiefs of Staff occurred the following month; a Chair was soon added.622 Simultaneously, the military began working with scientists and civilians to develop new and critical technologies, with perhaps the

most prominent example of this being the Manhattan Project.\textsuperscript{623} To encourage better interagency cooperation on matters of intelligence, the Office of Strategic Services, placed under the Joint Chiefs of Staff, quickly grew to more than 13,000 people.\textsuperscript{624}

2. \textit{Changing International Role: From Authoritarianism to Containment}

Accompanying the discussion about the most appropriate domestic political, military, and economic structures, were questions about the United States’ role in a post-war order. Henceforward, instead of “trustees,” the United States, together with the Soviet Union, Great Britain, and China, would perform global law enforcement functions.\textsuperscript{625} The development of weapons of mass destruction also changed the calculus: as Gaddis has observed, “The Big Four would remove from the hands of other nations, friendly as well as hostile, all weapons more dangerous than rifles.”\textsuperscript{626} Nuclear weapons secured for the United States a formative role in the international environment. Sheer military might of such magnitude could hardly be ignored.\textsuperscript{627} The question, though, was in what direction such power would be directed. Here, it was not Pearl Harbor that was dispositive.\textsuperscript{628} Instead, it was the thread of concern from authoritarianism that became, in the course of World War II, increasingly focused. As Professor Hans Morgenthau, a prominent international relations scholar at the University of Chicago, wrote in 1948, “The modern totalitarian state has been able to fill the gap between government and people . . . through the use of democratic symbols, totalitarian control of public opinion, and policies actually or seemingly benefiting the people. Practically all national energies flow into channels chosen by the government.”\textsuperscript{629} Classical realism was on the rise, in direct response to the power plays marking the international environment.

From authoritarianism, the United States’ concern narrowed to totalitarian regimes, and, following the war, still more narrowly to communism. Containing its advance became the overriding goal. The communist revolutions had been presaged by political writings. Ideas thus became seen as the precursors to revolutionary action. Resultantly, in the course of the third epoch, the object of

\textsuperscript{623} Id. at 58–59.
\textsuperscript{624} Id. at 63.
\textsuperscript{627} Id. at 253 (quoting President Harry S. Truman as describing nuclear weapons as “the Number One problem of the world”).
\textsuperscript{628} Again, I disagree with both Gaddis and Stuart about the instrumental role of Pearl Harbor. While extremely important in shaping Americans’ concept of security, the aim of the national security infrastructure was in many senses determined in the 1930s, with World War II merely focusing the country further along the same lines.
\textsuperscript{629} HANS MORGENTHAU, \textit{POLITICS AMONG NATIONS: THE STRUGGLE FOR POWER AND PEACE} 103 (1948).
national security became not just limiting the military expansion of the Soviet Union, but preventing the spread of communist and socialist political ideology. This had both international and domestic implications.

World War II had been a battle for democracy, waged against the threat of authoritarianism. The Tripartite Pact of 1940 drew together Adolf Hitler, Benito Mussolini, and Emperor Hirohito.\(^{630}\) In a simple ceremony devoid of fanfare, Roosevelt explained in his *Fourth Inaugural Address*, “We Americans of today, together with our allies, are passing through a period of supreme test. It is a test of our courage—of our resolve—of our wisdom—our essential democracy.”\(^{631}\) As the war drew to a close, however, the threat was more than just authoritarianism. Totalitarianism generally, and communism in particular, used mechanisms of control to dictate social and cultural affairs.

In February 1946, George F. Kennan, the American Charge d’Affaires in Moscow, presented his concerns in an 8000-word telegram to the U.S. Secretary of State.\(^{632}\) Kennan carefully considered the Soviet Union’s post-war outlook, in light of the country’s historical background, its animating political philosophy, the likely course of Soviet foreign policy, and what that outlook would mean for the United States.\(^{633}\) His conclusions were sobering. Russia, in Kennan’s view, would use the post-war period to increase its power with the aim of achieving a communist world system, coordinated and directed by Moscow.\(^{634}\) Russian hostility towards the United States could not be reduced.\(^{635}\) The two countries’ underlying philosophies and histories lay diametrically opposed, as did the two states’ futures.\(^{636}\)

Kennan, writing later for a broader audience, cited the work of Marx and Lenin, and noted the experience of the Russian Revolution:

\[\text{[I]deology . . . taught [the Soviet leadership] that the outside world was hostile and that it was their duty eventually to overthrow the political forces beyond their borders . . . . [P]owerful hands of Russian history and tradition reached up to sustain them in this feeling . . . . Now it lies in the nature of the mental world of the Soviet leaders, as well as in the character of their ideology, that no}\]

\[^{631}\text{President Franklin D. Roosevelt, Fourth Inaugural Address (Jan. 20, 1945), available at http://www.barleby.com/124/pres52.html.}\]
\[^{632}\text{See Telegram from George F. Kennan, Charge d’Affaires in Moscow, to James Byrnes, Sec’y of State (Feb. 22, 1946) [hereinafter Long Telegram], http://www.trumanlibrary.org/whistlestop/study_collections/coldwar/documents/pdf/6-6.pdf (misidentifying recipient as Byrnes’s successor in office, George C. Marshall).}\]
\[^{633}\text{See id.}\]
\[^{634}\text{See id.}\]
\[^{635}\text{See id. (“In summary, we have here a political force committed fanatically to the belief that with US there can be no permanent modus vivendi[,] that it is desirable and necessary that the internal harmony of our society be disrupted, our traditional way of life be destroyed, the international authority of our state be broken, if Soviet power is to be secure.”).}\]
\[^{636}\text{Id.}\]
opposition to them can be officially recognized as having any merit or justification whatsoever.\textsuperscript{637} Russia’s enemy was capitalism. Its quest was absolute power. And for the Soviet Union, the Kremlin appeared infallible. “In these circumstances it is clear that the main element of any United States policy toward the Soviet Union must be that of long-term, patient but firm and vigilant containment of Russian expansive tendencies.”\textsuperscript{638} Domestically, the United States’ only option would be to strengthen the health and vigor of its own society.\textsuperscript{639} Kennan explained,

> World Communism is like [a] malignant parasite which feeds only on diseased tissue. This is [the] point at which domestic and foreign politics meets. Every courageous and incisive measure to solve internal problems of our own society, to improve self confidence, discipline, morale and community spirit of our own people, is a diplomatic victory over Moscow . . . .\textsuperscript{640}

Professor John Lewis Gaddis has pointed to late February and early March 1946 as a pivotal time in Soviet-American relations.\textsuperscript{641} From the Iranian crisis through the balance of the year, “the United States made no concessions of significance to the Soviet Union.”\textsuperscript{642} Professor Gaddis also made clear that Kennan was not alone in his estimate of how future relations between the two countries would progress.\textsuperscript{643} The Forrestal Commission, appointed to examine Soviet foreign policy, questioned the degree to which communism had become a national religion; it concluded that to the extent that Soviet leaders adhered to the doctrine, the two countries’ futures lay in opposite directions.\textsuperscript{644}

Stalin’s February 1946 speech did little to undermine Kennan’s analysis or to dissuade Americans of the Soviet Union’s intent.\textsuperscript{645} In it, Stalin argued that victory in World War II demonstrated that the Soviet approach was not only viable, but that it was “a better form of organization of society than any non-Soviet social system.”\textsuperscript{646} Victory vindicated the strength of the Soviet military.\textsuperscript{647} Stalin considered communist advances in industry and agriculture as the key to the

country’s success.  648 He claimed that the immediate future would witness even greater growth, with Russian scientists outstripping “the achievements of science beyond the borders of the country.”  649 The American Administration considered Stalin’s speech to be a declaration of war.  650 Democracy and communism, Truman concluded, could never coexist.  651 The Administration went on to portray Soviet-American relations as a clash between two irreconcilable ideologies.  652

Almost immediately, the question of how to contain communism presented itself. Greece and Turkey stood in a precarious position. Seeking assistance from Congress, Truman explained:

The seeds of totalitarian regimes are nurtured by misery and want. They spread and grow in the evil soil of poverty and strife. They reach their full growth when the hope of a people for a better life has died. We must keep that hope alive. The free peoples of the world look to us for support in maintaining their freedoms. If we falter in our leadership, we may endanger the peace of the world—and we shall surely endanger the welfare of our own nation.  653

To what lengths was the United States willing to go to prevent communist ideology from taking hold? For Truman, failure to provide funding to the governments in the Mediterranean could lead to the collapse of pro-Western governments throughout Europe.  654

From that moment, U.S. national security depended on strengthening democratic regimes abroad—a theme that continues today in the fourth epoch. If these states fell to the opposing ideology, the United States’ interests would be significantly harmed. In this manner, global containment of the expansion of communist ideology became intimately tied to U.S. national security—itself the most important priority for the United States.

3. Institutional Questions and the National Security Act of 1947

To counter the growing communist threat, two sets of institutional issues confronted the United States: first, what to do about the armed services (in terms of unification and civil/military control); and second, what reforms were necessary to improve interagency communication, to strengthen presidential management of

648. Id. at 21–38.

654. Cf. id. ("[W]e may endanger the peace of the world . . . .").
resources, and to ensure a more efficient national security bureaucracy. But the second issue proved equally important in cementing the dominance of national security during the third epoch. For both issues, the National Security Act of 1947 (“1947 Act”) proved pivotal.

a. National Military Establishment

In enacting the 1947 Act, Congress sought:

To promote the national security by providing for a Secretary of Defense; for a National Military Establishment; for a Department of the Army, a Department of the Navy, and a Department of the Air Force; and for the coordination of the activities of the National Military Establishment with other departments and agencies of the Government concerned with national security.

The first question presented with regard to the organization of the armed forces centered on unification.

On December 19, 1945, President Truman released a special message to Congress recommending the establishment of a Department of National Defense, within which ground, sea, and air forces would be combined under a single civilian Secretary of National Defense.

“We would be taking a grave risk with the national security,” Truman stated, “if we did not move now to overcome permanently the present imperfections in our defense organization.” While unified command had been important in World War II, it was now imperative:

The boundaries that once separated the Army’s battlefield from the Navy’s battlefield have been virtually erased. If there is ever going to be another global conflict, it is sure to take place simultaneously on land and sea and in the air, with weapons of ever greater speed and range. Our combat forces must work together in one team as they have never been required to work together in the past.

655. STUART, supra note 13, at 73–74; see also Letter from James Forrestal to F. Eberstadt (June 19, 1945), in S. COMM. ON NAVAL AFF., REPORT TO HON. JAMES FORRESTAL, SECRETARY OF THE NAVY, ON UNIFICATION OF THE WAR AND NAVY DEPARTMENTS AND POSTWAR ORGANIZATION FOR NATIONAL SECURITY 1 (1945).

658. Truman, Recommending the Establishment of Department of Defense, supra note 656, at 546–60.
659. Id.
660. Id.
In addition to the creation of a single defense department, Truman planned for a Chief of Staff to work with the military commanders of the three coordinate branches in order to advise the Secretary of National Defense, as well as the President, on the most appropriate courses of action. This drive for a single Chief of Staff unsettled the Navy and the Marine Corp and was later abandoned in the Forrestal-Patterson compromise that structured the 1947 Act.

Truman's proposal reflected a concurrent conversation across the Atlantic; similar questions had beset the United Kingdom since the end of World War I. In 1923, Britain rejected the formation of a united Ministry of Defense, in favor of a Chiefs of Staff Committee, which would coordinate between the services. Gradually, however, Britain had progressed towards the creation of one department: In 1936, the United Kingdom created a Minister for the Coordination of Defense—a position initially without a department. The heads of the three services (the First Lord of the Admiralty for the Royal Navy, the Secretary of State for War for the Army, and the Secretary of State for Air for the Royal Air Force) remained part of the Cabinet. Upon coming to power, Sir Winston Churchill eliminated the Minister for the Coordination of Defence, creating instead the Minister of Defence, whose job was to coordinate defense efforts and to oversee the Chiefs of Staff Committee.

Churchill himself held the post of Minister of Defence coincident with Prime Minister (a tradition continued by Clement Attlee when he became Prime Minister in July 1945).

Following World War II, Britain, like the United States, struggled with how best to organize its military. In 1946, the government circulated a “White Paper” that rejected unification, stating, “Amalgamation [of land, sea, and air] . . . is a step which could not and should not be taken here and now.” Nevertheless, the White

661. *Id.* (“There should be three coordinated branches of the Department of National Defense: one for the land forces, one for the naval forces, and one for the air forces, each under an Assistant Secretary. The Navy should, of course, retain its own carrier, ship, and water-based aviation, which has proved so necessary for efficient fleet operation. And, of course, the Marine Corps should be continued as an integral part of the Navy.”).

662. STUART, supra note 13, at 96–126.

664. Resultantly, Thomas Inskip, the first to hold this post, was placed in an almost impossible position vis-à-vis the Services. For thoughtful discussion of these dynamics, see Sean Greenwood, *Sir Thomas Inskip as Minister for the Coordination of Defence, 1936–39, in Government and the Armed Forces in Britain, 1856–1990*, at 155–90 (Paul Smith ed., 1996).

665. *Id.*

667. *Id.* at 199 (quoting Churchill, “The key-change which occurred on my taking over was of course the supervision and direction of the Chiefs of Staff Committee by a Minister of Defence with undefined powers. As this Minister was also the Prime Minister, he had all the rights inherent in that office . . .”) (citation omitted); JERRY HARDMAN BROOKSHIRE, CLEMENT ATTLEE 189 (1995) (“Upon becoming Prime Minister, [Attlee] also assumed Churchill’s position as Minister of Defence, presiding over the Chiefs of Staff committee and the Defence committee.”).

668. STUART, supra note 13, at 99.
Paper called for the creation of a new Ministry of Defence (“MOD”) with “both the time and the authority to formulate and apply a unified defence policy for the three Services.” MOD would undertake three primary functions: it would determine the allotment of the available resources between the three services; it would settle questions of general administration on which a common policy for the three services was required; and it would administer inter-service organizations, such as the Combined Operations Headquarters and the Joint Intelligence Bureau. These recommendations quickly became law, leading to the formal establishment of MOD in January 1947. The three existing service ministers, who remained in direct control of ground, sea, and air services, ceased attending cabinet meetings. Over time, the role of the Minister of Defence expanded. Finally, in 1963, the government proposed a unified MOD, with complete authority and responsibility for the armed forces vested in one Secretary of State. As of April 1, 1964, a Secretary of State for Defence replaced the prior Cabinet position, with responsibility over a new, united Ministry of Defence.

The United Kingdom had emerged from World War II as the United States’ strongest ally in Europe. America thus paid attention to its military reorganization. But there were other motives for doing so. The United States had moved into a position of global prominence whence it could address the threat of communism. Its military structures, however, appeared inadequate for the challenges ahead. It was a tenuous time, with high stakes. And national security had become the most important consideration in U.S. policy. The services began fighting for their institutional independence.

The National Security Act of 1947 provided a solution to the competing inter-service tensions. The Act created the Department of the Air Force, and merged it, along with the Department of War and the Department of the Navy, into

669. Id.

676. It was clear that the country had a strong military: in addition to helping to win World War II, the United States possessed nuclear weapons. See Nuclear Weapons: Who Has What at a Glance, Arms Control Ass’n, http://www.armscontrol.org/factsheets/Nuclearweaponswhohaswhat (last visited Mar. 10, 2012) (discussing the United States’ early monopoly on nuclear weaponry).
677. For detailed accounts of the inter-service tensions, see generally Gaddis, Origins of the Cold War, supra note 472; Stuart, supra note 13.
a National Military Establishment (“NME”). The Secretary of Defense, like the United Kingdom’s Minister of Defence, would provide the general direction for the departments of the Army, Navy, and (newly formed) Air Force. As the President’s principal assistant in matters relating to national security, the Secretary of Defense would be responsible for supervising and coordinating budget estimates for the departments and agencies comprising the NME, as well as minimizing duplication between the services.

The second issue in the realm of the armed forces related to civil-military control. On the one hand, there was concern that the military’s role in policymaking would be too large. On the other hand, it seemed important to integrate those in direct command of the military into the decision-making structures. The solution came in the form of introducing a (civilian) Secretary of Defense, and placing the Joint Chiefs of Staff on a statutory basis. The legislation provided them with the authority to prepare strategic plans, provide strategic direction, establish unified commands where required, and give military advice to the President and to the Secretary of Defense. The NME underwent significant changes in 1949 and 1958 via statutory amendments, with further revisions in the interim period through Reorganization Plan No. 6. In 1949, the agency became the Department of Defense.

Importantly, many of the structures adopted during this time tended to restrict the influence of the Department of State. Diplomacy became sidelined. The third epoch is thus distinguished by an increasing militarization of U.S. national security policy. The creation of the NME is one example of the priority accorded to military institutions. Another example is the State-War-Navy Coordinating Committee (“SWNCC”).

679. Id.
680. Id.
681. Id.
682. Id.; see also STUART, supra note 13.
684. Id.
685. Id.
686. See National Security Act Amendments of 1949, ch. 412, 63 Stat. 578 (codified as amended at 50 U.S.C. §§ 408, 412) (renaming the NME the Department of Defense; adding a Deputy Secretary and the Chair of the Joint Chiefs, and converting the special assistants to the title Assistant Secretary of Defense); Department of Defense Reorganization Act of 1958, Pub. L. 85-599, 72 Stat. 514 (codified as amended at 10 U.S.C. § 716) (abolishing the Assistant Secretary of Defense for Research and Engineering) and transferring the functions to the new Director of Defense Research and Engineering); Reorganization Plan No. 6 of 1953 (abolishing the statutory boards and positions in the Office of the Secretary of Defense and transferring the functions to the Secretary of Defense; establishing a General Counsel; adding six new Assistant Secretaries of Defense, bringing the total to nine).
In 1944, Secretary of War Stimson proposed the formation of the SWNCC.\(^{688}\) With Secretary of State Cordell Hull ill at the time, however, plans for the SWNCC were put on hold.\(^{689}\) Hull’s replacement as acting Secretary of State, Edward Stettinius, Jr., subsequently demanded that the Secretary of State be given greater access to the White House.\(^{690}\) Roosevelt agreed to the presence of a State Department liaison between the President and the President’s Chief of Staff.\(^{691}\) In return, Stettinius agreed to the creation of the SWNCC.\(^{692}\) Despite the concession of giving the State Department a direct line to the White House, the SWNCC itself institutionalized military authority at the highest policymaking levels of government.\(^{693}\) It also was weighted towards military interests, with the armed forces obtaining two of the crucial three votes on all matters henceforward considered.\(^{694}\) Another example of the sidelining of the State Department and, with it, an emphasis on diplomatic and foreign relations in favor of a military-driven national security policy, can be found in the institutional arrangements related to the National Security Council (“NSC”).

\(b\). Coordinated for National Security: The NSC and CIA

The Truman Administration faced numerous institutional challenges in the wake of World War II. Issues associated with military organization have already been discussed. Equally important for U.S. national security were questions that concerned how to obtain, analyze, and disseminate information related to the communist threat. Just as with the momentum created by the founding of the NME, the sections of the 1947 Act focused on the NSC, the Central Intelligence Agency (“CIA”), and other institutions, underscored the priority accorded to national security.\(^{695}\)

\(^{689}\) STUART, supra note 13, at 117.

\(^{690}\) Id.

\(^{691}\) Id.

\(^{692}\) Id.

\(^{693}\) Id. at 118 (attributing to the SWNCC a greater impact on the role of the military in Washington, DC than it has previously been given and writing, “By filling a decision making vacuum in the latter stages of the war and the immediate postwar era, the SWNCC contributed significantly to the institutionalization of military authority at the highest levels of the policymaking community.”).

\(^{695}\) The 1947 National Security Act also created the National Security Resources Board, the Munitions Board, and the Research & Development Board. Each of these eventually collapsed. See, e.g., LASWELL, supra note 612, at 51, 55 (discussing the National Security Resources Board, and describing its collapse). I thus focus in this Article on the NME, the NSC, and the CIA as the most enduring aspects of the legislation.
Under the 1947 Act, the President would chair a new NSC. The Truman Administration expressed concern that the NSC would become a second cabinet. The original bill supported this concern: under it, the function of the NSC would have been “to integrate foreign and military policies.” The final statute adopted a watered-down approach, stating that the purpose of the NSC was merely “to advise the President with respect to the integration of foreign and military policies” related to national security in order to achieve greater interagency cooperation.

The membership of the NSC reflected the priority given to the military in the national security infrastructure. The organization would consist of the President, the Secretary of State, the Secretary of Defense, the Secretary of the Army, the Secretary of the Navy, the Secretary of the Air Force, the Chair of the National Security Resources Board (a creature of the NME), and such other officers as designated by the President with the advice and consent of the Senate. The State Department thus represented only one vote in a sea awash with military interests.

As a substantive matter, emphasis was placed on military solutions to questions of national security. The NSC, in addition to performing such functions as the President might direct, would assess and appraise the objectives, commitments, and risks of the United States in relation to the country’s actual and potential military power, in the interest of national security, and consider policies on matters of common interest to national security departments and agencies.

Along with the NSC, the 1947 Act also created the CIA. Calls for such an institution stemmed from the country’s experiences in World War II. Pearl Harbor had caught the country by surprise. Truman later reflected,

I have often thought that if there had been something like co-ordination of information in the government it would have been more difficult, if not impossible, for the Japanese to succeed in the sneak attack at Pearl Harbor. . . . The war taught us this lesson—that we have to collect intelligence in a manner that would make the information available where it was needed and when it was wanted, in an intelligent and understandable form.

698. Stuart, supra note 13, at 130.

700. Id.

702. Harry S. Truman, 2 Memoirs by Harry S. Truman: Years of Trial and Hope 56 (1965), quoted in Stuart, supra note 13, at 132.
The 1947 Act established the CIA with a Director of Central Intelligence ("DCI") as its head.\textsuperscript{703} It was a political appointment, requiring the advice and consent of the Senate, and its status would be civilian in character: any member of the armed services would be removed from the direct supervision and control of the military for the duration of his or her service as DCI.\textsuperscript{704} The CIA would coordinate, correlate, evaluate, and disseminate intelligence. Furthermore, it would henceforward be required to advise the NSC on intelligence activities relating to U.S. national security.\textsuperscript{705}

The statute did not explicitly make accommodation for the CIA to conduct clandestine operations, nor did it directly address counterespionage.\textsuperscript{706} The Act did, however, require the CIA "to perform such other functions and duties related to intelligence affecting the national security as the National Security Council may from time to time direct."\textsuperscript{707} Such functions and duties had a limit: the statute explicitly deprived the CIA of all police, subpoena, law enforcement, and internal security functions.\textsuperscript{708} Perhaps because of these limitations, it was not until 1976 that the Senate Select Committee on Intelligence was even formed.\textsuperscript{709}

Truman initially kept the NSC at arm’s length. He objected to Congress directing the executive branch on matters involving national security.\textsuperscript{710} After attending the first meeting of the NSC on September 26, 1947, Truman attended only ten of the next fifty-five meetings.\textsuperscript{711} Truman’s decision to delegate his authority to the State Department helped to stave off efforts by Secretary of Defense Forrestal to gain control of the Council.\textsuperscript{712} It also, initially, gave the State Department more influence in an organization heavily weighted towards the military.

The NSC quickly took on the role of defining U.S. national security threats. NSC

20/4, issued in November 1948, described the nature of the Soviet threat. This document became the basic statement of the country’s primary national security concern: “The gravest threat to the security of the United States within the foreseeable future stems from the hostile designs and formidable power of the U.S.S.R., and from the nature of the Soviet system.” Just as containment of the U.S.S.R. presented the overriding national security goal for the United States, the destruction of Western Europe appeared to be the Soviet Union’s top priority—one the United States vowed to disrupt. NSC 20/4 cited the continuing danger of war at any time—both military and political warfare. It warned against lapsing into an isolationist foreign policy, which would result in a loss of allies and influence. The United States would have to focus on reducing the power and influence of the Soviet Union to a point where it would no longer constitute a threat to countries’ international independence. This objective resonated with the goals of U.S. national security in the first epoch—ensuring for the United States international independence. To accomplish its broader aim, the country would have to maintain a high level of military readiness, ensure internal security against sabotage, subversion, and espionage, and “[k]eep the U.S. public fully informed and cognizant of the threats to our national security so that it will be prepared to support the measures which we must accordingly adopt.” In other words, national security would have to be an overriding priority, with the government’s articulation accepted—not questioned—by the population. The goal would be the containment of communist Russia.

In his January 1949 Inaugural Address, Truman highlighted the priority of national security concerns:

Each period of our national history has had its special challenges. Those that confront us now are as momentous as any in the past. Today marks the beginning not only of a new administration, but of a period that will be eventful, perhaps decisive, for us and for the world.

715. Id. (“Communist ideology and Soviet behavior clearly demonstrate that the ultimate objective of the leaders of the USSR is the domination of the world. Soviet leaders hold that the Soviet communist party is the militant vanguard of the world proletariat in its rise to political power, and that the USSR, base of the world communist movement, will not be safe until the non-communist nations have been so reduced in strength and numbers that communist influence is dominant throughout the world. The immediate goal of top priority since the recent war has been the political conquest of western Europe. The resistance of the United States is recognized by the USSR as a major obstacle to the attainment of these goals.”).

719. President Harry Truman, Inaugural Address (Jan. 20, 1949) [hereinafter Truman, Inaugural Address], in Inaugural Addresses, supra note 20, at 286.
Communism, Truman continued, “adheres to a false philosophy which purports to offer freedom, security, and greater opportunity to mankind. Misled by this philosophy, many peoples have sacrificed their liberties only to learn to their sorrow that deceit and mockery, poverty and tyranny, are their reward.” Truman dwelled on the battle that marked this age—the battle between communism and democracy:

Communism is based on the belief that man is so weak and inadequate that he is unable to govern himself, and therefore requires the rule of strong masters.

Democracy is based on the conviction that man has the moral and intellectual capacity, as well as the inalienable right, to govern himself with reason and justice.

Communism subjects the individual to arrest without lawful cause, punishment without trial, and forced labor as the chattel of the state. It decrees what information he shall receive, what art he shall produce, what leaders he shall follow, and what thoughts he shall think.

Democracy maintains that government is established for the benefit of the individual, and is charged with the responsibility of protecting the rights of the individual and his freedom in the exercise of his abilities.

Consistent with the Founding era, protecting the constitutional order of the country lay at the heart of U.S. national security interests. The third epoch, however, was in full swing. The United States would not only protect its own political order, but would also take responsibility for the entire “free world”:

We are moving on with other nations to build an even stronger structure of international order and justice. We shall have as our partners countries which, no longer solely concerned with the problem of national survival, are now working to improve the standards of living of all their people. We are ready to undertake new projects to strengthen the free world.

In this articulation, the seeds of the current, fourth epoch, were sown. The responsibility to fight for the free world rested with the United States. In this battle between good and bad, in the effort to contain communism, the United States must play its role—one consistent with both U.S. interests and the right. The United Nations would play a key role in strengthening “freedom-loving nations against the dangers of aggression.” Theories of the democratic peace permeated

4. Bureaucratic Evolution

Soviet influence immediately began to expand. In February 1948, communists took power in Czechoslovakia.726 Within a short time, Hungary became a Soviet republic.727 In mid-1948, the first Berlin crisis began.728 By 1949, these worldwide events had further catapulted the institutional conversation forward. Concerted efforts focused on what structures would be most appropriate for countering the threat. The NSC, for instance, created the Intelligence Survey Group (“ISG”) to consider the CIA’s relationship with other agencies.729 Chaired by Allen W. Dulles, the ISG issued a report, which made fifty-six recommendations, many of which excoriated the DCI and CIA.730 The report called for greater coordination between the CIA and FBI.731 It recommended greater continuity of service.732 The report also suggested that covert operations and clandestine intelligence-gathering be combined into one organization within the CIA.733 Although the recommendations were not immediately implemented, in 1952, the report became the framework for a major overhaul of the CIA.734

In a separate effort, the so-called “Eberstadt Report,” prepared at the behest of the first Hoover Commission, similarly addressed the national security infrastructure.735 It focused on continued tensions between the CIA, the military, and the State Department, as well as the lack of cooperation within the intelligence

L. No. 80-162.
community. Eberstadt, arguing for a more prominent role for the CIA, called for the integration of covert operations into one office within the CIA, subservient to the NSC. During war, oversight would transfer to the Joint Chiefs of Staff.

The evolution of institutional structures extended beyond the domestic realm and into international military and economic structures. Soviet armies stationed in Central and Eastern Europe prompted the United States and eleven other countries to sign the North Atlantic Treaty. The first Secretary General of the North Atlantic Treaty Organization ("NATO"), Lord Ismay, famously remarked that the goal was "to keep the Russians out, the Americans in and the Germans down." In addition to military preparedness, the United States looked to provide economic assistance in the form of aid to countries on the brink of economic ruin. The concern was that communism would find root in the socio-economic abyss if the United States did not respond. The European Recovery Program extended from July 1948 to June 1951, in the course of which the United States poured some $13 billion into Europe.

In support of a stronger international role, the NSC almost immediately began looking at ways to develop its covert-action capabilities. NSC 4, and its supplement, NSC 4-A, stated that the U.S.S.R. was conducting an intensive propaganda campaign against the United States by way of coordinated psychological, political, and economic measures designed to undermine non-communist elements in countries around the world. The alleged goal was to weaken and divide world opinion to prevent any effective opposition to Soviet aims. "The present world situation," NSC 4 concluded, "requires the immediate strengthening and coordination of all foreign information measures of the U.S. Government designed to influence attitudes in foreign countries in a direction favorable to the attainment of its objectives and to counteract effects of anti-US propaganda." The Council

744. See NAT’L SEC. COUNCIL, DIRECTIVE 4: COORDINATION OF FOREIGN INFORMATION MEASURES (1947) [hereinafter NSC 4]; NAT’L SEC. COUNCIL, DIRECTIVE 4-A: PSYCHOLOGICAL OPERATIONS (1947) [hereinafter NSC 4-A].
745. NSC 4, supra note 744.
thereafter assigned psychological operations to the CIA.\textsuperscript{746}

The State Department, concerned about its diminishing role and the potential that the military would create a second covert action office, pushed for a bright line rule on not just psychological operations, but on covert action more broadly. In June 1948, a new directive, \textit{NSC 10/2}, superseded \textit{NSC 4-A}, granting the DCI control over all covert action, including, but not limited to psychological operations.\textsuperscript{747} It defined such activities as those:

\begin{quote}
conducted or sponsored by this Government against hostile foreign states or groups or in support of friendly foreign states or groups but which are so planned and executed that any U.S. Government responsibility for them is not evident to unauthorized persons and that if uncovered the U.S. Government can plausibly disclaim any responsibility for them.\textsuperscript{748}
\end{quote}

The directive envisioned a broad range of activities:

\begin{quote}
[P]ropaganda; economic warfare; preventive direct action, including sabotage, anti-sabotage, demolition and evacuation measures; subversion against hostile states, including assistance to underground resistance movements, guerrillas and refugee liberations groups, and support of indigenous anti-[C]ommunist elements in threatened countries of the free world. Such operations should not include armed conflict by recognized military forces, espionage, counter-espionage, and cover and deception for military operations.\textsuperscript{749}
\end{quote}

The domestic bureaucracy had to adjust to meet the threat posed, specifically, by communist Russia.

The problem with the new powers assumed by the NSC and granted to the CIA, however, was that they were not limited to the former Soviet Union.\textsuperscript{750} To the contrary, they were blanket grants of authority. In part, this reflected the global nature of the threat: communism presented the potential for worldwide Soviet domination. Therefore, all countries could be legitimate theatres for U.S. operations. At the same time, the expanded powers could be used for means other than fighting communism. This helped to pave the way for the attachment of a broad range of interests in the fourth epoch.

Despite these institutional changes, rapidly evolving events continued to challenge the sufficiency of U.S. organizational structure. Specifically, in August of

\end{footnotes}
1949, the U.S.S.R. unexpectedly detonated its first atomic bomb.\textsuperscript{751} Since October 1946, intelligence analysts at the CIA’s Office of Reports and Estimates had assumed that the Soviet Union would not develop a nuclear weapon until sometime between 1950 and 1953, with stockpiles not developed until 1956.\textsuperscript{752} Although the document stating this conclusion, \textit{ORE 3/1}, noted that “[a]ny report of this nature is at best educated guesswork,” it cited the Soviet Union’s low industrial potential and limited technological advancement (particularly with regard to precision instruments and electronic controls) to support its claim that the U.S.S.R. would be unable to develop ground-to-ground guided missiles over the next decade.\textsuperscript{753} This estimate persisted without major changes until “Joe-1” (the U.S. code name for the first Soviet nuclear test) occurred.\textsuperscript{754}

The shock of the test reverberated across the American spectrum, driving public discourse as well as decisions at the highest levels of government.\textsuperscript{755} The news became public on September 23, 1949, when Truman announced to the country that the Soviet Union had successfully carried out an atomic explosion.\textsuperscript{756} Three days later, the \textit{New York Times} reported that the incident was “already affecting the political atmosphere” in the United States “very much as the communist coup in Czechoslovakia and the Soviet blockade of Berlin affected it in 1948.”\textsuperscript{757} Public fear skyrocketed.\textsuperscript{758} Deep within the executive branch, new initiatives followed: The President, for instance, issued a directive requesting that the Secretary of State and Secretary of Defense “undertake a reexamination of our objectives in peace

Immediately, an incessant stream of films began depicting the horrors that would ensue from Soviet atomic power: \textit{The Red Menace} (1949); \textit{I Was a Communist for the FBI} (1951); 1000 Years from Now (1952); \textit{Invasion USA} (1952); \textit{The Thief} (1952); \textit{My Son John} (1952); \textit{The Beast from 20,000 Fathoms} (1953); \textit{Kiss Me Deadly} (1955); and \textit{The Day the World Ended} (1956). Id.
and war and of the effect of these objectives on our strategic plans, in the light of
the probable fission bomb capability and possible thermonuclear bomb capability
of the Soviet Union.”

The Soviet detonation of the bomb, however, was not the only shock that
autumn. On October 1, 1949, Mao Zedong, leader of the Communist Party in
China, prevailed against the Nationalists and assumed control of the country.

The West reeled: the Soviet Union now had a powerful ally in the East, potentially
freeing the U.S.S.R. to pursue its designs in Europe.

Within six months of the fall of China, the NSC adopted NSC 68, which became
a blueprint for the Cold War. This document further cemented national security
as the overriding national interest. “[T]he Soviet Union, unlike previous aspirants
to hegemony,” the document reported, “is animated by a new fanatic faith,
anti-thetical to our own, and seeks to impose its absolute authority over the rest of
the world.”

The development of weapons of mass destruction meant that “every
individual faces the ever-present possibility of annihilation should the conflict
enter the phase of total war.” NSC 68 hearkened back to the first epoch in U.S.
national security:

The fundamental purpose of the United States is laid down in the Preamble to
the Constitution: “... to form a more perfect Union, establish justice, insure
domestic Tranquility, provide for the common defence, promote the general
Welfare, and secure the Blessings of Liberty to ourselves and our Posterior.” In
essence, the fundamental purpose is to assure the integrity and vitality of our
free society, which is founded upon the dignity and worth of the individual.

U.S. national security was, precisely the protection of such aims. The absolutism
of the Soviet system threatened U.S. interests: The U.S.S.R.’s aim was to subvert
and to destroy non-communist states, replacing them with communist regimes.

As the one country that could marshal the resources to counter Russian designs, the

absolute power ... The design, therefore, calls for the complete subversion or forcible destruction of the
machinery of government and structure of society in the countries of the non-Soviet world and their replacement
by an apparatus and structure subservient to and controlled from the Kremlin.”).
United States was the Soviet Union’s number-one enemy.\footnote{766}

\textit{NSC 68} considered the underlying philosophical conflict between the two countries. Different concepts of freedom and government marked the two regions.\footnote{767} In peace and in war, the Soviet Union challenged the United States. The country would therefore have to make responding to the threat its top priority.\footnote{768} It would be a total war, with all focus placed on preventing the Kremlin from advancing its designs and limiting the spread of communism.\footnote{769} Political, psychological, economic, and military action would be required to contain the Soviet Union. This meant blocking further expansion of Soviet power, exposing the falsities of Soviet pretentions, inducing a retraction of the Kremlin’s control and influence, and fostering the seeds of destruction within the Soviet system to where the Kremlin must modify its behavior.\footnote{770}

\textit{NSC 68} outlined sweeping changes in resource allocation, institutional structures, and foreign and domestic policy.\footnote{771} There would have to be a substantial increase in military expenditures, an increase in economic assistance for other countries, intensification of political and psychological warfare, the development of internal security and civilian defense programs, and the expansion of the United States’ intelligence activities.\footnote{772} It would not be enough, however, merely to increase the national security infrastructure—there would have to be a corresponding reduction of federal expenditures for purposes other than defense and foreign assistance.\footnote{773}

In short, national security would have to be the overriding aim of the government. Other programs would become subservient to the country’s national security interests.\footnote{774} To pay for this initiative, taxes would have to be increased.\footnote{775} Such would be the price of peace. “The gravest threat to the security of the United States within the foreseeable future,” the document concluded, “stems from the hostile designs and formidable power of the U.S.S.R., and from the nature of the Soviet system.”\footnote{776}
5. The Soviet Threat and the Domestic Realm

As national security ascended in importance, other interests became subordinate. Questions related to economic security and public health, for instance, quickly became seen through a national security lens. Thus, in November 1945, even as Truman elaborated upon a proposed “Economic Bill of Rights,” which contained “[t]he right to adequate medical care and the opportunity to achieve and enjoy good health,” he justified the establishment of a national health care system in terms of national security. He cited the medical examinations conducted by the Selective Service System during World War II. As of April 1, 1945, approximately five million male registrants for service had been turned away for health reasons. Another 1.5 million men had been discharged from the Army and Navy for physical or mental disability—exclusive of injuries sustained in combat—and an equal number had needed to be treated in the armed forces for diseases that pre-existed entry into the military. “Among the young women who applied for admission to the Women’s Army Corps,” Truman reported, “there was similar disability. Over one-third of those examined were rejected for physical or mental reasons.” The poor state of health care in the United States was impacting the country directly where it most mattered: in the military services.

Public health was not the only sphere to become subservient to national security interests. Law enforcement also took on a new role. Here, the perception of Soviet design as including domestic political subversion stimulated the growth of new institutions, programs, and authorities within the United States. Social and economic concerns were not just sidelined; they themselves became seen as part of the threat, to be countered with the most extreme measures possible. The existence of the country depended upon it. The FBI presents perhaps the best example of how the domestic fabric changed.

a. The Federal Bureau of Investigation

As early as 1946, FBI Director J. Edgar Hoover informed U.S. Attorney General Tom C. Clark that the Bureau “found it necessary to intensify its investigation of Communist Party activities and Soviet espionage cases.” Hoover anticipated the
use of widespread detention in the event of an emergency. He encouraged the Administration to undertake a detailed study of what additional legislation would be required to ensure that the proper powers were in place prior to such an event.

The threat, in Hoover’s eyes, did not merely come from communism, but from liberalism itself—communism’s first assistant. FBI Assistant Director Ladd explained,

To a large extent the power and influence of the Communist Party in this country, which is out of all proportion to the actual size of the Party, derives from the support which the Party receives from “Liberal” sources and from its connections in the labor unions. The Party earns its support by championing individual causes which are also sponsored by the Liberal elements.

The Emergency Detention Program, which operated from 1946 to 1950, subsequently prepared for the indefinite detention not just of active Communists, but also of individuals who might be sympathetic (or important) to Soviet aims, including individuals involved with organized labor, racial groups and coalitions, nationality groups, youth organizations, education and cultural societies, and science and research.

Individuals were rated based on a so-called “Security Index.” Draft executive orders stood ready to implement the program. The “Communist Index,” a separate list of individuals potentially subject to indefinite detention, swelled to more than 42,000.

There was a remarkable consistency between the executive and the legislative branches in the priority accorded national security and the corresponding extent to which the domestic national security infrastructure—in terms of institutions, authorities, and funding—would have to expand. For instance, in August 1950, the House Un-American Activities Committee favorably reported H.R. 9490, which, as subsequently amended by both Houses, became the McCarran Internal Security

783. See id.; Yates v. United States, 354 U.S. 298, 325 (1957) (holding that the district court did not give a proper instruction to the jury when it did not explain that advocacy under the Smith Act has to include urging of forcible overthrow), overruled on other grounds by Burks v. United States, 437 U.S. 1 (1978). But see Communist Party v. Subversive Activities Control Bd., 367 U.S. 1, 115 (1961) (upholding the registration requirement under the Subversive Activities Control Board as consistent with the First Amendment).

785. See id. (detailing the FBI’s approval of Ladd’s recommendations to counteract the possibility of a flood of propaganda from “Lefist and so-called Liberal sources”).

786. Id. (citing Memorandum from D. Milton Ladd, Assistant Dir., Fed. Bureau of Investigation, to J. Edgar Hoover, Dir., Fed. Bureau of Investigation (Feb. 27, 1946)). 787. See id. at 436–38.

788. See id. Nearly 10,000 native-born citizens were included on the Security Index list. Id. at 441. At the outbreak of the Korean War, the number of individuals on the list further expanded to nearly 14,000 people. Id.

789. Id. at 439.

790. Id. at 442.
Title II of the bill embodied one of the most extreme grants of power in American history. It derived from S. 4130, a bill that sought “to protect the internal security of the United States, [and] to provide for the detention in time of emergency of persons who may commit acts of espionage or sabotage.” Considered by supporters as a more effective response to the perceived threat than the House bill simultaneously moving through Congress, opponents considered S. 4130 as a “concentration camp bill,” claiming it to be the most authoritarian instrument to ever be presented on the floor of Congress. Senator Pat McCarran balked at what he initially viewed as unconstitutional measures threatening to attach themselves to his bill. Senator Kefauver commented, “We seem to be running over each other in a contest to see who can devise the most ‘anti’ anti-Communist legislation.” In September 1950 the detention provisions of the Senate instrument were added to the McCarran Bill. President Truman’s subsequent veto of the bill was based not on the extremity of Title II—to the contrary: that it did not go far enough. Congress subsequently overrode the veto, passing the McCarran Internal Security Act of 1950.

The final bill limited the FBI’s latitude in indefinitely detaining individuals. The legislation required that there be “reasonable ground to believe that such person probably will engage in, or probably will conspire with others to engage in, acts of espionage and sabotage” before detention would be permissible. The statute also required hearings, an administrative board review, and appeal to the U.S. Courts of Appeals.

The scheme outlined in the statute conflicted with Hoover’s plans for detaining individuals considered a threat to national security. But neither the Department of Justice nor the FBI made any plans to bring the detention program into conformity with the statute. To the contrary, Attorney General J. Howard McGrath directed

Hoover to ignore the legislation. Moreover, in light of the rapidly expanding list of names and the limited personnel available to ensure that everyone on the list was actually a security risk, Hoover received instruction that “all persons now or hereafter included by the Bureau on the Security Index should be considered subjects for immediate apprehension, thus resolving any possible doubtful cases in favor of the Government in the interests of the national security.” By 1952, nearly 20,000 names on the Security Index fell outside the standards set forth in the Internal Security Act of 1950. Nevertheless, for the duration of Attorney General Herbert Brownell’s tenure, 1953 to 1954, the program remained in place. By the close of 1954, more than 26,000 names graced the list. National security trumped criminal law norms. Congress did little to push back.

The FBI initiated myriad national security investigations, perceiving threats in every element of civil society. The broadest program for collecting information took the form of COMINFIL, a shorthand name for Communist Infiltration. Its initial goal was “to focus on the Communist Party’s alleged efforts to penetrate domestic groups,” but in practice, it expanded well beyond to target political activities, legislative activities, domestic administration, civil rights, youth groups, women’s liberation, farming matters, cultural activities, veterans activities, religious organizations, educational institutions, and industry. According to the Attorney General, these investigations encompassed “the entire spectrum of the social and labor movement in the country.” By 1960, the FBI had initiated some 432,000 investigations on individuals and groups. Over the next three years, the FBI opened another 9000 files.

Of great concern to the Bureau was the potential for individuals in government service to do even greater harm to the country than ordinary citizens. With this in mind, in 1947, Truman established a Federal Employee Loyalty Program, the basic features of which became folded into Eisenhower’s Federal Employee Security

Program. The key question asked by each agency was whether the acceptance of each applicant for government service would “be clearly consistent with the national security.” What this meant was that where any question existed, government interests prevailed. Considerable variation marked the way in which different departments interpreted these requirements. Crucially, it was administrative (not judicial) mechanisms that adjudicated—that is, the decision was being made entirely within Article II agencies. At the most basic level this called into question the level of constitutional protections available. It also cast doubt on the enterprise being undertaken. In other words, it was the administrative agencies themselves that were carrying out the program. It was not, however, for business or economic expertise to which such agencies were looked; instead, they were expected to be experts on ideas.

In keeping with the overriding characteristics of the third epoch, concerns about authoritarian regimes—and communism in particular—permeated these federal programs. The standards for determining loyalty derived from membership in, or association with, groups designated on the Attorney General’s list as:

[T]otalitarian, Fascist, Communist, or subversive, or which has adopted, or shows, a policy of advocating or approving the commission of acts of force or violence to deny other persons their rights under the Constitution of the United States, or which seeks to alter the form of government of the United States by unconstitutional means.

The programs evolved into the screening of employees based on their political beliefs. They also spread well beyond sabotage and espionage to any political idea that might be considered subversive.

In some ways, these programs also looked to basic conceptions of U.S. national security representative of the first epoch: the purpose of the Union was to protect the Constitution, which itself framed the political institutions of government. Efforts to undermine the Constitution (or the government) through sowing political ideas thus represented an attack on U.S. national security.

In seeking to prevent political challenge, new initiatives undermined the Constitution itself, creating tension between the object being secured and the institution of the federal government. The Bureau’s activities targeted free speech,
freedom of association, privacy, and other rights considered central to constitutional law. Unease surfaced. President Truman, for instance, expressed concern about the risks to constitutional government posed by the Internal Security Act of 1950. At some point, it made little sense to talk about protecting the U.S. Constitution, if the measures being implemented to protect it destroyed its fundamental tenets.

b. Militarization

Under President Eisenhower’s stewardship, the NSC—rather than the State Department, which would have been expected to make recommendations on foreign policy—became the main source of major national and international security issues. The organization’s hierarchical efficiency played a role here in establishing it as the principal national and international security policymaking body. Within the NSC, military interests dominated, further sidelining the State Department. Eisenhower also developed the NSC’s covert operations capabilities, emphasizing in the process not the tools of statecraft, but the cunning of secrecy and military action. The so-called “5412 Committee” (named after NSC 5412) met regularly to review and recommend new operations.

The continued primacy of national security in the domestic realm, and particularly a militarized NSS, was consistent with Eisenhower’s background and perspective. In his Second Inaugural Address, which he entitled “The Price of Peace,” Eisenhower noted that the entire continent of Europe was divided, “[a]nd so, too, is all the world. The divisive force is International Communism and the power that it controls.” He maintained the Manichean analysis of good versus evil that marked his First Inaugural Address:

824. Office of the Historian, History of the National Security Council, 1947–1997, supra note 701. It is perhaps unsurprising that the Secretary of State at the time, John Foster Dulles, bore an antipathy towards the NSC. See id. (“Secretary of State Dulles . . . had reservations about the NSC system. He was the strongest personality in the Eisenhower Cabinet and jealously guarded his role as principal adviser to the President on foreign policy.”).
825. Id.
826. See id. The NSC was organized along hierarchical command structures. The Departments of State and Defense would produce draft recommendations on specific topics, look for points of consensus, forward the report to the planning board and then to the full Council, which met every Thursday morning. Id. Once a decision was reached, the report would go to the Operations Coordinating Board for implementation. Id. Note that the Operations Coordinating Board was established pursuant to Exec. Order No. 10483, 18 Fed. Reg. 5379 (1953). See CODY M. BROWN, THE NATIONAL SECURITY COUNCIL: A LEGAL HISTORY OF THE PRESIDENT’S MOST POWERFUL ADVISERS 18 (2008), http://pnsr.org/data/images/the%20national%20security%20council.pdf.
827. BROWN, supra note 826, at 7. Similar committees were later named “303,” “40,” and “Special Coordination Committee.” Id. at 29.
The designs of that power, dark in purpose, are clear in practice. It strives to seal forever the fate of those it has enslaved. It strives to break the ties that unite the free. And it strives to capture—to exploit for its own greater power—all forces of change in the world, especially the needs of the hungry and the hopes of the oppressed.829

The United States, fighting on the side of right, could take hope from the change sweeping through Europe. The country had a special responsibility to the world: “We recognize,” Eisenhower said, “and accept our own deep involvement in the destiny of men everywhere.”830

The United States’ formative role in the second epoch intensified during the third as the nation proved itself willing to engage in military matters anywhere communism threatened to take hold. Korea, Vietnam, South America—the United States was now willing to use the military in a preemptive role. No longer was the country merely protecting its commercial trade or responding to attack; now it was ready to use its military might in order to shape the global environment. It was in this third epoch that the United States first took on the role of international police. To fuel this engine, the United States required enormous resources, for which a close partnership with science and industry became critical.

When it came time to leave office, Eisenhower took the unusual step of issuing a farewell address—hearkening back to George Washington, who had used his departure to warn the fledgling country of looming risks to its national security.831 Eisenhower had taken his oath of office on the bible that Washington had used.832 Like Washington, Eisenhower came from a military background.833 And, like Washington, Eisenhower evinced concern about too much emphasis on the military; neither man felt mercenary armies (“which have at one time or another subverted the liberties of all-most all the countries they have been raised to defend”) could be tolerated.834 For Eisenhower, the great danger to the country may have derived from worldwide communism, but the country’s response—the

829. Id.

834. See George Washington, Sentiments on a Peace Establishment, May 2, 1783, Writings 26: 374–76, 388–91, in 3 THE FOUNDERS’ CONSTITUTION 128–29 (Phillip B. Kurland & Ralph Lerner eds., 1987) (“Altho’ a large standing Army in time of Peace hath ever been considered dangerous to the liberties of a Country, yet a few Troops, under certain circumstances, are not only safe, but indispensably necessary. Fortunately for us our relative situation requires but few. The same circumstances which so effectually retarded, and in the end conspired to defeat the attempts of Britain to subdue us, will now powerfully tend to render us secure. Our distance from the European States in a great degree frees us of apprehension, from their numerous regular forces and the Insults and dangers which are to be dreaded from their Ambition. But, if our danger from those powers was more imminent, yet we are too poor to maintain a standing Army adequate to our defence, and was our Country more populous and rich, still it could not be done without great oppression of the people.”).
pairing of military and industrial interests—might shift the conversation away from what was best for the country: “In the councils of government,” Eisenhower reflected, “we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex.” 835 For Eisenhower, “The potential for the disastrous rise of misplaced power exists and will persist.” 836 The United States must never lose sight of the purpose of national security:

We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted only an alert and knowledgeable citizenry can compel the proper meshing of huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together. 837

The strong priority accorded to national security carried a grave risk—namely, the capture of the intellectual, economic, and social fabric of society: “The prospect of domination of the nation’s scholars by Federal employment, project allocations, and the power of money,” Eisenhower warned, “is ever present—and is gravely to be regarded.” 838 Therefore, although the country faced a serious external threat, and though national security had been accorded priority, such matters were not without risk.

c. National Security and Civil Rights

In 1944, Swedish economist (and later Nobel Laureate) Karl Gunnar Myrdal published an extensive study of race relations in the United States. 839 At nearly 1500 pages (including the index), Myrdal’s work provided an exhaustive look at the domestic social structure. 840 The study had a significant impact on the evolution of racial integration in the United States. 841 It also drew attention to the fact that the United States’ efforts to counter fascism and nazism required the country to reject the same within domestic bounds. 842 “Fascism and nazism,” Myrdal wrote, “are based on a racial superiority dogma . . . . In fighting fascism

836. Id.

and nazism, America had to stand before the whole world in favor of racial
tolerance and cooperation and of racial equality.”

As a matter of national security, much appeared to turn on the United States’
ability to portray itself as a democratic country distinguished by liberty and
equality—this was precisely what separated the West from totalitarianism. Interna-
tional perception mattered. Further attention was drawn to the role of propa-
ganda in the Soviet effort to discredit the United States. Failure to address racial
disparity would fuel Soviet criticism of the West, giving the U.S.S.R. ammunition
to mount its psychological campaign. It would undermine the United States’
role within the western bloc, bringing disrepute on the very ideas that the West
claimed as its foundation. The extent to which the United States appeared
hypocritical would diminish American authority and perceptions of veracity across
the board.

Accordingly, from 1946 to the mid-1960s, scholars and successive administra-
tions raised concern about the impact of domestic civil rights issues on the United
States’ international prestige. Writing in 1950, Harold Lasswell pointed out that
Jim Crow laws simply facilitated Soviet propaganda. Civil rights reform came
to be seen as essential to U.S. national security.

Professor Mary Dudziak thoughtfully examined the intense international scruta-
tiny that accompanied the civil rights movement in the context of the Cold War. Her work notes that the international dimension is just that—one side of a complex, multifaceted movement—and thus does not substitute for a careful
examination of the civil rights movement from a domestic perspective. But in
looking at the international reaction to postwar racial violence and race discrimina-
tion, Dudziak found that the Soviet Union was more than willing to take advantage
of prominent incidents, leading the Truman Administration to recognize the
harmful effects of race discrimination on the country’s foreign relations.
For the Soviet Union, visible instances of American failure to treat its citizens as equals supported its claims regarding the weaknesses of democracy and the conditions in which individuals found themselves in the United States.\textsuperscript{855} Western European powers, in turn, felt that the United States, with such a prominent international role during the Cold War, was made more vulnerable to Soviet allegations because of the United States’ domestic race relations.\textsuperscript{856} The claims made against the United States, moreover, redounded to Western democratic norms more generally. Thus, in 1958, the Secretary of the British Labour Party felt the need to note, in response to the pending execution of Jimmy Wilson, an African-American sentenced to death in Alabama for stealing less than two dollars, that it was unfortunate that “those who wish to criticize western liberty and democracy” had been provided with “such suitable ammunition for their propaganda.”\textsuperscript{857} Secretary of State John Foster Dulles became involved in the case, and the Governor of Alabama received an average of one thousand letters per day, many of them from overseas.\textsuperscript{858} Dudziak explained,

> During the Cold War years, when international perceptions of American democracy were thought to affect the nation’s ability to maintain its leadership role, and particularly to ensure that democracy would be appealing to newly independent nations in Asia and Africa, the diplomatic impact of race in America was especially stark.\textsuperscript{859}

In short, from 1946 through the mid-1960s, failure to treat all citizens in accordance with basic principles of liberal democracy undermined American claims to a system grounded in concepts of equality and the protection of rights. To the extent that the Soviet Union could exploit these failures, U.S. interests suffered.

Despite the growing concern about the impact of race relations on national security, between 1945 and 1957, Congress repeatedly struck down civil rights bills.\textsuperscript{860} It was not until the Civil Rights Act of 1957, largely focused on voting rights, that the legislature finally passed a civil rights measure, followed by another in 1960.\textsuperscript{861} The steady expansion of marches and meetings in the early 1960s, in conjunction with violence in Birmingham and elsewhere, put increasing pressure on Congress to act.

Lyndon B. Johnson, the Senate Majority Leader from 1955 to 1961, went on to play a key role in driving through the Civil Rights Act of 1964. His decisive victory over Barry Goldwater in the presidential election of 1964 heralded further support for civil rights and a renewed commitment to national security. Johnson came to office noting: “[O]urs is a time of change—rapid and fantastic change bearing the secrets of nature, multiplying the nations, placing in uncertain hands new weapons for mastery and destruction, shaking old values, and uprooting old ways.” He went on to frame the constitutional values of the country as an “American covenant,” arguing that such covenant had been “[c]onceived in justice, written in liberty, and bound in union . . . .” National security was, precisely, the purpose for which the country had been founded: “In each generation, with toil and tears, we have had to earn our heritage again,” he said. “Underneath the clamor of building and the rush of our day’s pursuits, we are believers in justice and liberty and union, and in our own Union.”

6. Hypertrophic Executive Power

With the primacy accorded national security concerns, the corresponding infrastructure enjoyed a period of unprecedented growth. World War II had destroyed any homage to isolationism or appeasement that might otherwise mark U.S. international relations. But engagement—especially global military, political, and economic engagement—was expensive and required a complex bureaucratic structure to feed and coordinate. The National Security Act of 1947 had created the NME, which quickly became the Department of Defense. Its authorities and capabilities rapidly expanded. By 1958, Eisenhower was calling for a comprehensive system of unified command under the direct authority of the Secretary of Defense with the advice and assistance of the Joint Chiefs of Staff, which had taken on new responsibilities. New legislation created a general

Eisenhower, Special Message to the Congress Transmitting Reorganization Plan 1 of 1956 (May 16, 1956), available at http://www.presidency.ucsb.edu/ws/?pid=10489#axzz1lzvXa1RO.
counsel and six additional Assistant Secretaries of Defense ("ASDs"). Eisenhower gave the ASDs the authority to give orders to the military departments with written authorization from the Secretary of Defense. Under the Department of Defense Reorganization Act of 1958, responsibilities of the ASDs for research and engineering transferred to a new Director of Defense Research and Engineering. The creation of the Air Force introduced another major entity into the mix, and later statutory amendments expanded the Joint Chiefs of Staff to include the Commandant of the Marine Corps.

The structure of the NSC rapidly expanded. By mid-1952, for instance, the Psychological Strategy Board ("PSB") had become the largest component of the NSC, with a staff of 130 and a budget twice that of the rest of the NSC. Although the PSB eventually folded, it set an important precedent for the NSC—namely, its use as a direct instrument of the presidency. The PSB laid the standard for an even more ambitious Operations Coordinating Board, which Eisenhower used to great effect. In 1953, NSC 162/2 replaced NSC 68, in the process not only reaffirming containment and deterrence, but also elevating the importance of nuclear weapons and calling for a greater role for covert action, a policy further cemented in NSC 5412. The CIA, for its part, soon incorporated not only intelligence coordination and analysis, but also intelligence gathering and covert operations. Driving the entire process was the threat of totalitarianism generally. In 1959, Democratic Senator Henry Jackson of Washington explained, "The central issue of our time is this: Can a free society so organize its human and material resources to outperform totalitarianism?" The answer seemed to be a

881. Id. at 252.
combination of organizing, reorganizing, and re-reorganizing the national security bureaucracy, expanding authorities, and giving ever more money to the cause.

In this structure, the military gained special status—and funding. In 1949, Congress made approximately twenty percent more in defense appropriations than the previous year.\footnote{882}{U.S. Bureau of the Census, Historical Statistics of the United States, Colonial Times to 1970, at 1114 (1975).} The Korean War erupted in mid-1950.\footnote{883}{See Overview of Korean War Battles/Offensives, The Korean War, http://www.korean-war.com/TimeLine/KoreanWarOverview.html (last visited Dec. 30, 2011).} Although active hostilities ended within three years,\footnote{884}{See id.} by that time, the Cold War had taken hold. Congress initially seemed somewhat hesitant about funding the many initiatives encapsulated by \textit{NSC 68}. But its reluctance proved short lived. Korea appeared to be the beginning of concerted Soviet action, and Congress opened its purse in response.\footnote{885}{See Walter Issacson \& Evan Thomas, \textit{The Wise Men: Six Friends and the World They Made} 513 (1986) (describing how the North Korean attack of South Korea led Congress to triple the defense and international security budget).} Secretary of State Dean Acheson later reflected, “Korea saved us.”\footnote{886}{See id.; see also Martin Walker, \textit{The Cold War: A History} 77 (1995).}

Following Korea, defense outlays over the next ten years were three times higher than those that marked the late 1940s. From 1947 to 1950, the real annual military spending never went above $60 billion.\footnote{887}{Robert Higgs, \textit{The Cold War Economy: Opportunity Costs, Ideology, and the Politics of Crisis}, 31 Explorations in Econ. Hist. 283, 286–88 (1994), http://www.colorado.edu/ibs/eb/alston/econ8534/SectionXII/Higgs_The_Cold_War_Economy.pdf.} In sharp contrast, after 1952, it never went below $143 billion—and often was considerably higher (for example, from 1956 to 1965, the average of military appropriations was $168 billion).\footnote{888}{Id. at 289.} Between 1960 and 1962, spending increased another eleven percent.\footnote{889}{Id.} The Vietnam War further drove appropriations after 1965.\footnote{890}{Id. at 289–90 (“The bulk of the military entrenchment during the period 1972 to 1976 reflected public and congressional revulsion against defense costs and presidential discretion, as evidenced by passage of the War Powers Resolution in 1973 and the National Emergencies Act of 1976 . . . .”).}

Between 1972 and 1976, public and congressional frustration about spending and presidential discretion came to the surface—as reflected by diminished appropriations, the introduction of the 1973 War Powers Resolution, and the adoption of the National Emergencies Act of 1976.\footnote{891}{See id. at 289–90 (“The bulk of the military entrenchment during the period 1972 to 1976 reflected public and congressional revulsion against defense costs and presidential discretion, as evidenced by passage of the War Powers Resolution in 1973 and the National Emergencies Act in 1976 . . . .”).} But after 1978, both the Carter and Reagan Administrations again focused on military outlays.\footnote{892}{See id. at 290 (describing the Carter and Reagan Administrations’ focus on military outlays after 1978 as “obvious”).}
1978 and 1980, funding increased by $15.7 billion (10.4%), and between 1980 and 1987, by $84.4 billion (50.7%).

To sustain the primacy of national security as a concern, a significant amount of apprehension about the threats faced had to be present. It was Lasswell who recognized that crises “strengthen[] the plausibility of the military way of thinking.”

Consistency in framing the problems generates more support for military solutions, and as the military gains control, emphasis turns to armaments: “The professional strategist thinks of all the contingencies connected with the use of weapons in war. The result is to emphasize in the minds of all who are exposed to his thinking the most extreme possibilities and the importance of physical weapons.”

Central to this chain was the continuing sense of crisis. Otherwise, as Professor Samuel Huntington observed in 1961, “The longer a given level of military force is apparently adequate for deterrence, the greater is the temptation to assume that a slightly lower level might be equally adequate.”

The ideological climate and the presentation of the threat in moral terms—good versus evil—went some way towards sustaining the emphasis on the military.

Episodic crises also played a role, such as North Korea crossing the 38th parallel and the Soviet Union invading Afghanistan. At other times, the military infrastructure directed the public’s attention to “gaps” and the attendant dangers thereby created. The historical record has proven less than kind to such assertions: The 175 Soviet divisions, for instance, that were widely considered the strength of the Red threat following World War II, in fact suffered from lack of equipment and soldiers.

The “bomber gap” in the mid-1950s, “missile gap” between 1958 and 1961, and the subsequent “anti-missile gap” and “first-strike missile gap” all turned out to be false alarms. The public account of the Gulf of Tonkin turned out to be mistaken—despite the use of the incident as a basis to go to war. Other gaps, from thermonuclear megatonnage to antisubmarine capabilities, became instrumental in generating congressional support for military appro-
The Committee on the Present Danger later announced that the 1970s had been a “decade of neglect,” making the United States vulnerable to Russian aggression. Professor Robert Higgs, evaluating the Cold War political economy and various additional instances of false alarms, concluded that “the drumbeat succession of such episodes helped to sustain an atmosphere of tension and insecurity that fostered the maintenance of an enormous ongoing arms program.” Writing in 1955, John Lord O’Brian dubbed the epoch, the “age of anxiety.”

In this mix, the National Security Act of 1947 played a special role. It created a national security elite—specifically, the NSC, the NME (later the Department of Defense), the Joint Chiefs of Staff, the DCI, the CIA, the Air Force, and others who were not just given special powers, but who had a special hold on national security information. Ted Galen Carpenter, a foreign policy analyst with the Cato Institute, suggested in 1986 that the creation of the CIA did not just provide the executive branch with a potent new foreign policy tool, “[i]t also set in motion a cult of secrecy, a far more pervasive system of classifying information than had ever existed previously, and a growing executive determination to withhold sensitive information from the public and from Congress.”

The projects financed in this secret world remained shielded from the legislature. The “Black Budget” grew from the Manhattan Project and eventually expanded. By 1989, the Black Budget reached $36 billion per year. Blanket appropriations masked hundreds of programs from congressional eyes—programs that took on a disproportionate size within the executive branch. By 1991, for instance, the Black Budget for less than one dozen secret Air Force programs alone

903. See id. at 301–02.
904. Id.

906. O’BRIAN, supra note 819, at 3.
910. Id. at 16.
911. See id. at 16–17. Weiner reported that most of Congress had no idea about the size and scope of the Black Budget—including some members of the House Armed Services Committee. Id. (“This issue wasn’t being debated openly. Discussing the workings of the black world on the floor of the Congress may be deemed tantamount to an act of treason, and a member who does so runs the risk of being censured or expelled. The same set of national-security laws that allowed the black budget’s existence silenced public debate on specific weapons or specific dollars or specific snafus in the black budget. The Reagan administration wanted the laws toughened so that a reporter or a public official who obtained information about a black program and published it could be convicted of high treason. Upon conviction, such a traitor could be shot to death by a firing squad.”).
came to $2.85 billion—approximately the same amount it cost to run the entire State Department.  

Armed with a rapidly expanding bureaucracy, increasing secrecy, and huge amounts of money, the strength of the executive branch also expanded. In 1960, historian Arthur M. Schlesinger, Jr. coined the term “imperial presidency” to refer to the power being wielded by the executive branch. His work stemmed from concern that the executive branch in general, and the President in particular, had exceeded constitutional limits.

Although Schlesinger tied the growth of the imperial presidency to the New Deal, the impact of the primacy of national security in the third epoch can hardly be ignored. The CIA’s role in Iran (1953), Guatemala (1954), Egypt (1954), Laos (1959), and Cuba (1960 to 1961); the secret bombing of Laos (1964 to 1973); military operations in Cambodia, Thailand, and Vietnam; and the Iran-Contra affair (1985 to 1986) reflected the primacy accorded to national security during the third epoch, as well as the emphasis placed on containing the communist threat. They all also pointed to a radically distended executive branch that was subject only to minimal restrictions from Congress and the courts.

The executive branch was aware of its growing authority and influence—one borne of congressional acquiescence. “[I]n this past third of a century,” President Richard Nixon commented during his First Inaugural Address, “government has passed more laws, spent more money, initiated more programs, than in all our previous history.” Under his watchful eye, Henry Kissinger nearly trebled the staff of the NSC, and later became both Secretary of State and National Security Advisor at the same time. Kissinger continued both positions under President Gerald R. Ford—a man with minimal foreign affairs experience.

Ford pressed Congress to give the executive even more latitude. In 1975, he informed a joint session of Congress that “[b]y the Constitution and tradition, the execution of foreign policy is the responsibility of the President.” He argued, in recent years, under the stress of the Vietnam war, legislative restrictions on the President’s ability to execute foreign policy and military decisions have proliferated . . . . As President, I welcome the advice and cooperation of the House and the Senate. But if our foreign policy is to be successful, we cannot rigidly restrict in legislation the ability of the President to act. The conduct of

915. See id. at 324–25.
918. Id.
negotiations is ill-suited to such limitations. Legislative restrictions, intended for the best motives and purposes, can have the opposite result . . . 920

Congress gradually started to push back against the executive. The legislature began to cut funding for operations in South Vietnam, Turkey, Latin America, and elsewhere. 921 Ford expressed his concern directly to Congress, again using the language of crisis to pressure legislators: “In the conduct of foreign affairs, Presidential initiative and ability to act swiftly in emergencies are essential to our national interest.” 922 Ford sought to shore up support for covert operations and the intelligence agencies:

   In a world where information is power, a vital element of our national security lies in our intelligence services. They are essential to our Nation’s security in peace as in war. Americans can be grateful for the important but largely unsung contributions and achievements of the intelligence services of this Nation. 923

To Ford, the Church Committee was harming U.S. interests. 924 While the national security system may need to be subject to congressional review, the public nature of the hearings lay beyond the pale. 925 It did a disservice to the nation and undermined U.S. intelligence. 926 “It ties our hands while our potential enemies operate with secrecy, with skill, and with vast resources. Any investigation must be conducted with maximum discretion and dispatch to avoid crippling a vital national institution.” 927 The CIA had been “of maximum importance” to Ford. 928 The stakes could not be higher. “The national security budget that I have submitted is the minimum the United States needs in this critical hour.” 929

Under President Jimmy Carter, the National Security Advisor became the principal source of U.S. foreign policy. With the State Department relegated to the role of institutional memory (and operations coordinator), the National Security Advisor assumed an enhanced role. 930 Zbigniew Brzezinski, a formidable intellectual, took control. 931

President Ronald Reagan came to office vowing to reduce the size and influence of the federal establishment “and to demand recognition of the distinction between

the powers granted to the Federal Government and those reserved to the States or to the people." 932 Reagan emphasized that it was the states that created the federal government; the federal government had not given birth to the states. 933 Two classes of issues emerged: general social and economic questions resided with the states; the federal government, however, retained total control over national security. 934 Reagan further elaborated on this distinction in his Second Inaugural Address by explaining that social and medical concerns lay firmly in the realm of state and local government and, therefore, beyond the responsibilities of the federal government. 935 “Now,” he continued, “let me turn to a task which is the primary responsibility of National Government—the safety and security of our people.” 936 Reagan’s understanding of federalism closely reflected national security’s third epoch: national security was not just one of many responsibilities of the federal government—it was the primary responsibility.

During the third epoch, national security became the dominant national discourse. The priority accorded to the issue reflected the fact that the existence of the State was a precondition to dialogue. Without the political institutions of government, all other concerns would be moot. National security, moreover, was non-negotiable: the resources required to realize national security simply had to be found. The appeal to national security resonated with American history. At the time of the Founding, and again, with the Civil War, protection of the Union became the overriding aim. During the Cold War, it was thus consistent with the American experience to set national security, grounded in the preservation of federal institutions and the Constitution, as a priority.

With such a strong discourse, difficulty in generating attention for other issues could be substantially lessened by folding them into the national security dialogue. Public focus, institutional power, and mobilization of resources would follow. A symbiotic relationship between national security and other concerns thus developed: to get attention, issues could locate themselves within a national security framework, which, in turn, expanded national security and made the framework even more powerful. With this in mind, it was perhaps inevitable that the national security dialogue expanded, as soon as its primary object of containment—which provided some limit on the object to which the State’s authorities and resources were directed—no longer applied.

936. Id.
Glimmers of the broad, conceptual expansion of national security appeared before the fall of the Berlin Wall. Writing in 1974, for instance, General Maxwell Taylor, former Chairman of the Joint Chiefs of Staff, suggested creating “an expanded National Security Council charged with dealing with all forms of security threats, military and nonmilitary, and having access to all elements of government and to all relevant resources capable of contributing to this broad task.” He criticized the NSC for failing to deal with environmental and other threats—issues that could only belong to national security under an expanded conceptualization of the term. A few years later, Lester Brown, the founder of Worldwatch Institute, warned:

[T]hreats to security may now arise less from the relationship of nation to nation and more from the relationship of man to nature. Dwindling reserves of oil and deterioration of the Earth’s biological systems now threaten the security of nations everywhere.

He thus argued for a broader definition of security—one that also encompassed energy and environmental policy.

It was the end of the Cold War, though, that opened the gates to conceptualizing a multitude of risks as threats to U.S. national security. The fall of the Soviet Union meant that the policy of containment could no longer limit American designs. As the former Soviet republics achieved independence, and East and West Germany moved toward unification, the United States appeared unchallenged in its international position. By the 1990s, the United States had moved to global engagement on economic, military, and political matters. It had also created a massive domestic bureaucracy and forged strong relationships with science and technology, in the process funneling substantial resources to these institutions.

To what object, then, would the existing institutions, resources, and authorities be directed? The defining feature of the fourth epoch quickly became national security threats understood as anything that presented a potential harm to the United States. Thus, as noted at the beginning of this Article, the May 2010 NSS considered economic growth, armed conflict, climate change, pandemic disease, terrorism, and organized crime as national security concerns.

938. See id. (“Hence, I would make a closing suggestion for dealing with this organizational deficiency. It is to create an expanded National Security Council charged with dealing with all forms of security threats, military and nonmilitary, and having access to all elements of government and to all relevant resources capable of contributing to this broad task.”).
940. See id.
941. OBAMA NSS, supra note 1, at 2, 29–30.
Defense Review ("QDR"), Quadrennial Intelligence Community Review ("QICR"), and other documents have followed suit.\footnote{Supra notes 6–7 and accompanying text.}

The intelligence community now considers a broad range of threats to fall within national security.\footnote{QICR, supra note 7, at 1 (according to the QICR, the intelligence community has relied heavily on Nat’l Intelligence Council, Global Trends 2025 (2008) [hereinafter Nat’l Intelligence Council, 2025]).} In one scenario called “October Surprise,” the community anticipates a significant shift of power to corporations and megacities, “allowing global ills (from climate change to international crime) to spiral out of control.”\footnote{Id. at 6.} Under this conception, local power presents a threat to the federal government.\footnote{Id. at 13. (“[P]owerful, self-sustaining megacities displace national authority . . . . Governments create city- and community-level intelligence agencies.”).} Failure to move beyond “traditional geopolitical threats” to fund the national security infrastructure adequately presents the greatest danger to national security. The envisioned result is worth quoting at length:

\begin{quote}
Climate change causes health crises and environmental threats that challenge weakened government and international institutions. Furthermore, porous borders exacerbate health crises and facilitate the spread of international crime. Threats to the U.S. national security environment include natural disasters that cause significant physical destruction and threaten key infrastructure such as power grids, financial systems, and water containment systems. Pandemics threaten public safety, trigger widespread anxiety, and stretch resources. Moreover, the growing social stratification and inequality that results from a “growth at all costs” mentality drives antagonistic “have nots” to challenge government authority and turn increasingly violent. Finally, government spending on defense and intelligence is significantly decreased due to an environment with few traditional geopolitical threats.\footnote{Id. at 14.}
\end{quote}

The intelligence community flatly rejects traditional geopolitical considerations, choosing instead to conceive threats to U.S. national security as potential risks, which if manifest, would undermine the institution of the national government.\footnote{See id.}

This perspective is not unique to the Director of National Intelligence: every federal agency tasked with intelligence collection was involved in drafting the review.\footnote{Id. at 2. The agencies include the CIA, the Defense Intelligence Agency, the Department of Energy (Intelligence and Counterintelligence), the Department of Homeland Security (Under Secretary for Intelligence and Analysis), the Department of State (Intelligence and Research), the Department of the Treasury (Intelligence and Analysis), the Drug Enforcement Administration (Intelligence), the FBI (National Security Branch), the Marine Corps Intelligence Activity, the National Geospatial-Intelligence Agency, the National Reconnaissance Office, the National Security Agency, the Office of the Director of National Intelligence, the Office of Naval Intelligence, the United States Air Force, the United States Army, and the Department of Defense (Under Secretary of Defense for Intelligence, Under Secretary of Defense for Policy). Id.} Based on the scenarios imagined, moreover, the Director of National
Intelligence issued a separate, classified QICR report to discuss potential impact on the missions, operating principles, and capabilities (understood in terms of both authorities and funding) the intelligence community would have to acquire “to manage the range of uncertainties in the future.”

The above documents represent some of the most important formal articulations of U.S. national security. Yet, they are not exhaustive. A host of other reports similarly adopt positions well beyond traditional national security concerns. Such calls echo outside of the executive branch in quasi-nongovernmental organizations. The Project on National Security Reform (“PNSR”), for instance, funded and supported by corporations, foundations, and Congress, and made up of individuals drawn from private and public entities, has argued that the 1947 national security system is “dangerously out-dated, imbalanced and dysfunctional.” In 2008, PNSR issued a statutorily required report to the President, arguing that the Cold War-era concept of national security no longer applies: “In our view, national security must be conceived as the capacity of the United States to define, defend, and advance its interests and principles in the world.” For PSNR, the objectives of U.S. national security policy now include, inter alia, the ability “[t]o maintain security against massive societal disruption as a result of

949. Id. at 2.
natural forces, including pandemics, natural disasters, and climate change." The report highlights the foundations of national power as integral to U.S. national security interests: “[s]ound economic policy, energy security, robust physical and human infrastructures including our health and education systems, especially in the sciences and engineering.” These power-bases, the report claims, are as essential to U.S. national security as are weapons and wealth.

Such broad policy articulations are now finding root in law. By statutory definition, as previously noted, “intelligence related to national security” has expanded to include all threats “to the United States, its people, property, or interests . . . .” Stripped of what minimal limitations had been set by the object of national security in the third epoch—containment of the U.S.S.R. and the spread of communist ideology—a broad range of risks to the country now fall within the national security rubric.

Two critical aspects of this broad articulation of U.S. national security deserve notice. First, it sidelines the function of intent by incorporating actor-less threats. This approach sits uneasily in a domestic political structure built on adversarial intent. Second, it sidesteps the likelihood that such risks will actually become manifest; the mere fact that such threats could occur is sufficient to drive the country to action. An infinite number of risks may therefore be placed within the existing framework.

Climate change, drug trafficking, pandemic disease, and organized crime, amongst other areas, have quickly become intimately linked to U.S. national security. A brief examination of each area reveals three points of convergence. First, each emerged during the Cold War and attempted to attach to the national security framework but did not gather momentum until the war’s end, at which time government institutions and resources became available. Second, reflecting the power and focus of the national security dialogue, new developments in each area led to a rapid expansion in the reach of the executive branch and, specifically, in the federal national security infrastructure. Third, none of the areas identified have an end point; instead, they merely reflect ongoing problems, suggesting the indefinite expansion of executive authority generally and the national security infrastructure in particular. The consequences are borne in the rapidly shifting constitutional structure of the United States.

1. Climate Change

Maxwell Taylor’s call in 1974 to expand the NSC’s responsibilities was one of many efforts to attach environmental concerns to the national security dialogue.
Three principle arguments connected environmental matters generally, and climate change specifically, to U.S. national security: First, that limited access to natural resources would foment intra and interstate conflict and insecurity. Second, that war and armaments contribute to environmental degradation. Third, that changes in the environment pose an existential threat to the United States.

The first argument—that environmental scarcity might lead to conflict—was certainly not a new one. In 1798, the English scholar Thomas Malthus argued “that the power of population is indefinitely greater than the power of the earth to produce subsistence for man.” The resulting imbalance between the need of human beings for sustenance and the amount of food available would lead to hunger, disease, and war. Concern about the impact of environmental factors in driving countries to war continued: In 1948, environmentalist Fairfield Osborn asked, “When will it be openly recognized that one of the principal cause[s] of the aggressive attitudes of individual nations and of much of the present discord among groups of nations is traceable to diminishing productive lands and to increasing population pressures?” Professor Ted Robert Gurr of the University of Maryland later suggested that environmental changes could harm economic growth, underscore social tension, and lead to insurgencies.

A variation on this theme anticipated that a country with environmental scarcity would not only experience greater internal conflict, but would also adopt a more aggressive posture internationally, thus presenting a threat to regional stability and, ultimately, U.S. national security. In 1977, Dr. William Ophuls, a former member of the U.S. Foreign Service, predicted that poor nations would confront richer nations for a greater share of the world’s wealth, as global environmental damages increased disparity between North and South. Three years later, Professor Robert Heilbroner, a prominent economist, expressed similar concern.

Environmentally created insecurity, however, would not just arise from military aggression. Refugee flows, and associated immigration concerns related to environmental disasters, could undermine a host country’s stability. Changing ethnic constituencies, public health concerns, and management of the sheer number of

963. ROBERT HEILBRONER, AN INQUIRY INTO THE HUMAN PROSPECT 39, 95 (1980).
individuals seeking refuge could bring an entirely different set of concerns—all of which went to questions of national security.965

The second argument considered the impact of war, military operations, and munitions on the environment—suggesting in the process a circular relationship between the damage inflicted by the State and the resulting security threats. Like the first argument, it was not a novel concern.966 Efforts to focus attention on the matter continued throughout the third epoch: In 1976, for instance, Arthur Westing considered the ecological consequences of the Second Indochina War.967 He followed this in 1977 with a book that considered the impact of weapons of mass destruction and their impact on the environment.968 Yet a third volume focused on how warfare damaged the environment.969 Other scholars picked up this theme.970

The third argument began to draw out environmental concerns as an existential threat: access to food, water, energy, and other resources; economic decline; massive disruptions in services; and alteration in the balance of power between States all threatened state sovereignty and, potentially, the United States’ existence. Accordingly, in 1988, Professor Paul R. Ehrlich, a prominent biologist at Stanford University, and Anne Ehrlich, a research scientist in biological sciences, issued a warning at Pugwash, an annual conference founded in 1957 with the aim of bringing influential scholars together to reduce the danger of armed conflict.971 Their address was titled: The Environmental Dimensions of National Security, and

965. See id.
967. See generally Arthur Westing, Ecological Consequences of the Second Indochina War (1976) (exploring the environmental effects of warfare in Indochina).
was followed by a publication of the same name.972 Worldwatch Institute similarly announced in its *State of the World 1988*: “For four decades, security has been defined largely in ideological terms . . . . The threat posed by continuing environmental deterioration is no longer a hypothetical one.”973 One author in the study noted, “Threats to human security are now seen much more in environmental and economic terms and less in political ones.”974

These arguments culminated in calls to redefine the term “security,” expanding its understanding beyond traditional geo-political concerns.975 Richard Ullman, for instance, suggested that security must be understood to include any threat that had the ability to quickly degrade the quality of life of the state’s inhabitants, or that narrowed the choices available to people and organizations.976 Such a broad conception of security could include environmental concerns and geopolitical threats, as well as broader security issues.977

This entire discussion predates the fall of the Berlin Wall, in the wake of which security studies went into free fall. The question was whether conventional understandings of security were still relevant.978 Writing in *Foreign Affairs*, Jessica Tuchman Mathews, former Director of the Office of Global Issues at the NSC, suggested, “The 1990s will demand a redefinition of what constitutes national security.”979 For Matthews, the 1970s were marked by an expanding emphasis on economics, but “[g]lobal developments now suggest the need for another analogous, broadening definition of national security to include resource, environmental and demographic issues.”980 Her central concern stemmed from challenges to State power: “Environmental strains that transcend national borders are already beginning to break down the sacred boundaries of national sovereignty.”981 Secretary of State James Baker, seeking funding from Congress, similarly argued, “Traditional concepts of what constitutes a threat to national and

980. Id. I disagree with Mathews’s assertion that the expansion of national security to include economics was a product of the 1970s. As discussed at great length throughout this Article, the economic condition of the country was of primary concern to the Founders and came to mark all three epochs that preceded the current age.
981. Id.
global security need to be updated and extended to such divergent concerns as environmental degradation, narcotics trafficking, and terrorism.982 The potential for State collapse became a clarion call: Robert Kaplan, writing in the Atlantic Monthly, suggested, “It is time to understand ‘the environment’ for what it is: the national-security issue of the early twenty-first century.”983

Calling for an expansion in traditional understandings of security, articles linking environmental concerns to national security flooded the literature. For the most part, the documents expounded upon the three major arguments that pre-dated the fall of the Berlin Wall.984 New case studies highlighted the relationship between environmental scarcity and violent conflict.985 Prominent think-tanks and nongovernmental organizations picked up similar themes.986 Survival dedicated an entire issue to nonmilitary aspects of national security, including articles on

984. See, e.g., JANET WELSH BROWN, IN THE U.S. INTEREST: RESOURCES, GROWTH, AND SECURITY IN THE DEVELOPING WORLD (1990); 1 WAR AND UNDERDEVELOPMENT: THE ECONOMIC AND SOCIAL CONSEQUENCES OF CONFLICT, supra note 970; Peter H. Homer-Dixon, On the Threshold: Environmental Changes as Causes of Acute Conflict, INT’L SEC., Fall 1991, at 76–116 (summarizing the arguments that justify treating environmental degradation as a national security concern); Peter H. Gleick, The Implications of Global Climatic Changes for International Security, CLIMATIC CHANGE, Oct. 1989, at 309–25 [hereinafter Gleick, Implications] (arguing that countries will fight over diminished access to clean water); Norman Myers, Environment and Security, FOREIGN POL’Y, Spring 1989, at 23–41 (suggesting that environmental pressure has a detrimental impact on national and international security); Joyce R. Starr, Water Wars, FOREIGN POL’Y, Spring 1991, at 17 (“As early as the mid-1980s, U.S. government intelligence services estimated that there were at least 10 places in the world where war could break out over dwindling shared water—the majority in the Middle East. Jordan, Israel, Cyprus, Malta, and the countries of the Arabian Peninsula are sliding into the perilous zone where all available fresh surface and groundwater supplies will be fully utilized. Algeria, Egypt, Morocco, and Tunisia face similar prospects in 10 to 20 years.”); David Wirth, Climate Chaos, FOREIGN POL’Y, Spring 1989, at 3, 10 (arguing environmental changes produce instabilities leading to war).
985. See, e.g., Thomas F. Homer-Dixon, Environmental Scarcities and Violent Conflict: Evidence from Cases, INT’L SEC., Summer 1994, at 5–40 (“[E]nvironmental scarcities are already contributing to violent conflicts in many parts of the developing world. These conflicts are probably the early signs of an upsurge of violence in the coming decades that will be induced or aggravated by scarcity. The violence will usually be sub-national, persistent, and diffuse. Poor societies will be particularly affected since they are less able to buffer themselves from environmental scarcities and the social crises they cause. These societies are, in fact, already suffering acute hardship from shortages of water, forests, and especially fertile land.”); see also Peter Gizewski & Thomas F. Homer-Dixon, Environmental Scarcity and Violent Conflict: The Case of Pakistan, EPS, Apr. 1996; Philip Howard & Thomas F. Homer-Dixon, Environmental Scarcity and Violent Conflict: The Case of Chiapas, Mexico, EPS, June 1995; Kimberley Kelly & Thomas F. demographic shifts, energy and resources, and climate and ecology.\(^{987}\) It was not only environmental scientists sounding the toll: Articles appeared in the *Bulletin of Atomic Scientists*, for instance, underscoring the concern about the relationship between the environment and national security.\(^{988}\) The discussion spilled over into the popular literature.\(^{989}\)

Most relevant to the emphasis of this Article, such concerns soon echoed in the political realm. In 1989, Al Gore noted that “the environment is becoming a matter of national security—an issue that directly and imminently menaces the interests of the state or the welfare of the people.”\(^{990}\) The following year Senator Sam Nunn, Chair of the Armed Services Committee, explained:

>[A] new and different threat to our national security is emerging—the destruction of our environment. The defense establishment has a clear stake in countering this growing threat. I believe that one of our key national security objectives must be to reverse the accelerating pace of environmental destruction around the globe.\(^{991}\)

Importantly, there was very little pushback on this expanding concept of national security.\(^{992}\) In part, this reflected the mutual interests of the various interest groups involved: Security studies, broadly focused on Soviet-American

\(^{992}\) See, e.g., Gleick, *Implications*, supra note 984; see also Richard A. Matthew, *In Defense of Environment and Security Research, Env't., Change & Sec.* Proj. Rep., Summer 2002, at 109. But see Richard N. Lebow, *Nuclear Crisis Management: A Dangerous Illusion* 508 (1988) (arguing for restricting security studies to “anything that concerns the prevention of superpower nuclear war”); Marc A. Levy, *Is the Environment a National Security Issue?*, *Int’l Sec.*, Autumn 1995, at 35 (arguing against a national security framing and suggesting that climate change, ozone depletion, and other ecological concerns are best addressed in environmental arena); Shira Yoffe, Basins at Risk: Conflict and Cooperation over International Freshwater Resources (Oct. 12, 2001) (unpublished Ph.D. dissertation, Oregon State University), available at http://ir.library.oregonstate.edu/xmlui/handle/1957/9693 (creating a database of historical incidents of water-related cooperation and conflict across all international river basins from 1948 to 1999 and finding that “international relations over shared freshwater resources were overwhelmingly cooperative. Although conflicts over water occurred, violent conflict was rare” and outweighed by agreements. Indicators, like climate, water stress, government type, power relationships, showed no statistically significant association with international water conflict or cooperation. Instead, “the tendency towards conflict was associated with rapid to extreme changes in physical or institutional systems . . .”)
concerns, could turn to a new area. Environmentalists captured attention and resources for their concerns. And the national security establishment could continue to sustain its institutional strength, even as it branched out into new areas.

As a practical matter, the incorporation of climate change into the concept of national security was not merely cosmetic. Real changes to institutions, institutional relationships, and authorities followed. In this regard, climate change did not merely represent a parallel interest to national security, for which alternative framing could be adopted. Instead, it became embedded in the heart of the existing national security framework—such as the country’s national security strategies, the organization of the NSC, the authorities and programs initiated by the intelligence community, and the like.

The existing framework, however, was created with a different object in mind; it emphasized the State generally—and the national government in particular—as the central player. It strongly favored military interests. It was primed to expand executive authority. It involved layers of secrecy that diminished the ability of the legislature and the people to conduct oversight. It entailed close relationships between government and industry. Instead of changing the national security structure, climate change became subsumed into the existing framework. One of the best examples of this comes from the evolution of the NSS.

a. Origins of the NSS

In 1986, the Goldwater-Nichols Defense Reorganization Act required the President to report to Congress on the United States’ national security strategy. The concern at the time was not that the United States lacked a grand strategy—containment of the former Soviet Union had acted in this role for the previous four decades. Instead, the issue was whether the United States’ national security strategy was sufficiently focused on specific objectives, whether it was coherent, the degree to which it integrated different seats of power, and the anticipated time horizon.

Accordingly, the legislation required classified and unclassified annual reports to be provided to Congress, with newly elected Presidents required to submit the same within 150 days of taking office. Such reports must address five points:

1. The worldwide interests, goals, and objectives of the United States that are vital to the national security of the United States.

996. See Goldwater-Nichols Department of Defense Reorganization Act § 603.
(2) The foreign policy, worldwide commitments, and national defense capa-
 bilities of the United States necessary to deter aggression and to implement the
 national security strategy of the United States.
 (3) The proposed short-term and long-term uses of the political, economic,
military, and other elements of the national power of the United States to
protect or promote the interests and achieve the goals and objectives . . . .
 (4) The adequacy of the capabilities of the United States to carry out the
national security strategy of the United States, including an evaluation of the
balance among the capabilities of all elements of the national power of the
United States to support the implementation of the national security strategy.
 (5) Such other information as may be necessary to help inform Congress on
matters relating to the national security strategy of the United States. 997

In practice, these reports have often not been submitted on schedule, and in some
cases, were not submitted at all. 998 Resultantly, in the twenty-five years that have
elapsed since Congress passed the legislation, only some fifteen such reports have
been issued: The Second Reagan Administration submitted two (in 1987 and
1988). 999 The George H.W. Bush Administration provided three reports (in 1990,
only two (in 2002 and 2006). 1002 And the Obama Administration, to date, has only
submitted one (in 2010). 1003 Despite the staccato nature of these documents, they
nonetheless provide insight into the changing nature of national security in the
fourth epoch.

The first NSS Report was issued by the Second Reagan Administration in
1987. 1004 In the wake of the Goldwater-Nichols Act, the Reagan Administration
had only a small amount of time in which to draft the strategy. 1005 The final
document adopted language that basically reflected the thinking of the third
epoch. 1006 Its two major sections focused on foreign policy and defense, mirroring
the Republican Party’s embrace of military instruments—almost to the exclusion

1006. See REAGAN NSS, supra note 1004.
of other sources of power.\textsuperscript{1007} U.S. policy continued to target the Soviet Union.\textsuperscript{1008} Merely halting the advance of communism or freezing the current political boundaries would be insufficient.\textsuperscript{1009} The document took on an aggressive stance, noting as one of its objectives, “to contain and reverse the expansion of Soviet control and military presence throughout the world, and to increase the costs of Soviet support and use of proxy, terrorist, and subversive forces.”\textsuperscript{1010} The NSC, which had become the dominant policymaking body within the executive branch, would provide the key to integrating the government’s approach; by 1987, it had produced more than 250 classified national security decision directives, which guided the Administration’s policies.\textsuperscript{1011} The NSS anticipated that the NSC would take steps “to encourage and strongly support aid, trade, and investment programs that promote economic development and the growth of humane, social, and political orders in the Third World.”\textsuperscript{1012}

In 1988, the Reagan Administration continued its emphasis on containment of the U.S.S.R.\textsuperscript{1013} An integrated strategy would include economic, as well as military, concerns.\textsuperscript{1014} The Administration began to focus on specific regions of the world, for which an integrated strategy would be required.\textsuperscript{1015}

The George H.W. Bush Administration came to power amidst a rapidly changing geopolitical climate. An internal review of the national security infrastructure, friction over the nomination of John Tower as Secretary of Defense, and the changing international environment delayed publication of the NSS.\textsuperscript{1016} When it was finally released in 1990, the NSS embraced the changes in Eastern Europe, but nonetheless presented a cautious approach to the future.\textsuperscript{1017}

Global political change continued apace, which delayed the Bush Administration’s second NSS. War loomed in the Middle East as Iraq invaded Kuwait.\textsuperscript{1018} Between March 11, 1990 and December 25, 1991, all fifteen former republics of the Soviet Union became independent.\textsuperscript{1019} The dissolution of the Warsaw Pact, and

new treaties on armaments between the United States and Russia, again detracted from the preparation of the NSS.\textsuperscript{1020}

When it was finally published in 1991, the Bush Administration’s second NSS again emphasized a military approach.\textsuperscript{1021} There was some innovation within this broader framing (e.g., regional conflict would now become the organizing principle for U.S. military capabilities, nuclear deterrence would have to evolve, and focus on non-proliferation and arms control would need to intensify).\textsuperscript{1022} But military might still trumped other considerations.\textsuperscript{1023} Consistent with previous articulations, economic strength was also considered integral to U.S. national security.\textsuperscript{1024}

The final NSS of the Bush Administration was released in January 1993—immediately prior to Clinton taking office.\textsuperscript{1025} The document essentially highlighted the accomplishments of the past twelve years of Republican stewardship and laid down markers on which Clinton’s future record would be judged.\textsuperscript{1026} The content itself closely reflected the strategies of the third epoch, emphasizing collective engagement and democratic peace.\textsuperscript{1027}

\textit{b. The NSS in the Fourth Epoch}

Just how diffuse national security goals would become in the fourth epoch was almost immediately seen in the Clinton Administration—the first post-Cold War presidency. President Clinton acknowledged, “The world is no longer divided into two hostile camps.”\textsuperscript{1028} What, then, would provide the focus for U.S. national security?

The interests of the third epoch lingered. In June 1994, eighteen months into the Clinton Administration, the executive branch laid out its first strategy: “engagement and enlargement,” which echoed the goals of previous administrations.\textsuperscript{1029} Subsequent documents sustained this focus; according to the 1995 NSS, for instance, the Administration’s central goals were “to sustain our security with military forces that are ready to fight,” “to bolster America’s economic revitaliza-
tion,” and “to promote democracy abroad.” The document invoked the democratic peace theory that had been so influential in the third epoch, stating that “our national security strategy is based on enlarging the community of market democracies and containing a range of threats to our nation, our allies, and our interests.”

But the Clinton Administration also went considerably beyond the concepts that marked the third age. The preface to the 1995 NSS explained that the end of the Cold War had fundamentally changed U.S. security imperatives:

The central security challenge of the past half century—the threat of communist expansion—is gone. The dangers we face today are more diverse. Ethnic conflict is spreading and rogue states pose a serious danger to regional stability in many corners of the globe. The proliferation of weapons of mass destruction represents a major challenge to our security. Large scale environmental degradation, exacerbated by rapid population growth, threatens to undermine political stability in many countries and regions.

Ethnic conflict, rogue states, and environmental degradation constituted new threats to national security. Nonetheless, the same historical and ideological framework from the third epoch—protecting the United States as a domestic entity, conceived by the Founders and enshrined in the Constitution—still applied during this “new era”: “[T]he same idea that was under attack three times this Century—first by imperialism and then by fascism and communism—remains under attack today, but on many fronts at once.”

The national security infrastructure adopted by the Clinton Administration reflected the diverse nature of threats that were rapidly being folded into national security, which made it more difficult for the executive agencies to reach agreement on the NSS. Colonel Don Snider, who had helped prepare the 1988 NSS as a member of the NSC, lamented that the (resulting) unwieldy structure brought so many different parties to the table that it made integration difficult.

1031. Id. at 2.
1032. Id. at 1 (emphasis added).
1033. Id. at 1–2.
1034. SNIDER, supra note 995, at 11 (“The Clinton administration has created a national security structure within the Executive branch that allows each major point of view on national security an institutional power base just short of the President, and with no other office capable of integrating them. The important points of view, particularly relevant to crisis management, but also applicable to formulating strategy for a [National Security Strategy Report], and their organizational bases are: the military options for security and stability in the Department of Defense; bilateral relations and transnational issues with a regional focus, in the Department of State and on the White House staff; considerations of economic security, particularly as they influence the domestic economy, in the National Economic Council supported by very strong Treasury and Commerce Departments, and the US Trade Representative; and, issues of environmental security, in the Office of the Vice President. When working as the National Security Council, opinions of cabinet-level representatives of this
Unwieldy or not, the structure would have to evolve to take account of new risks: “We have identified a new security agenda that addresses contemporary threats such as the proliferation of nuclear, chemical and biological weapons, terrorism, and international crime.”

Nonproliferation; weapons of mass destruction; trafficking in drugs, arms, and human beings; cybersecurity; and climate change all presented challenges.

Our new security agenda recognizes that in a global age, threats to America do not simply come from determined enemies and deadly weapons. Our efforts to curb global warming through the Kyoto protocol are vital to protect America from a future of rising sea levels and economic disruption.

By folding these new concerns directly into the national security strategy, the Clinton Administration began a process of re-tooling the existing system to address the emergent issues.

Despite its overriding focus on matters of national security—or perhaps, in some sense, because of it—the first George W. Bush Administration only submitted one NSS. The very first line of that document put another nail in the coffin of the third epoch: “The great struggles of the twentieth century between liberty and totalitarianism,” it began, “ended with a decisive victory for the forces of freedom.” The United States had emerged from the Cold War as a powerful country: “Today, the United States enjoys a position of unparalleled military strength and great economic and political influence.”

The object of U.S. national security was nothing less than world peace.

In a world that is safe, people will be able to make their own lives better. We will defend the peace by fighting terrorists and tyrants. We will preserve the peace by building good relations among the great powers. We will extend the peace by encouraging free and open societies on every continent.

Terrorism, in a post-9/11 environment, figured largely in the calculation. Also emphasized were matters relating to the environment. The United States

structure can only be melded together by the President himself, not by the National Security Advisor or the White House Chief of Staff.”

would incorporate environmental concerns directly into its trade negotiations. The document explained: “Economic growth should be accompanied by global efforts to stabilize greenhouse gas concentrations associated with this growth, containing them at a level that prevents dangerous human interference with the global climate.” The goal would be to reduce U.S. greenhouse gas emissions by eighteen percent over the next decade. To accomplish this aim, the country would remain committed to the basic United Nations Framework Convention for international cooperation, obtain agreements with key industries to cut greenhouse gas emission, develop standards for measuring and registering reductions, promote renewable energy production as well as nuclear power, increase spending on research into new conservation technologies, and help developing countries to head off emissions. Shared health and environmental threats would provide a further basis for bilateral negotiations.

In 2006, the National Security Strategy took on a different overtone: “My fellow Americans, America is at war,” it began. The document continued, “This is a wartime national security strategy required by the grave challenge we face—the rise of terrorism fueled by an aggressive ideology of hatred and murder.” Militant Islamic radicalism had replaced communism as the primary concern. But unlike the third epoch, when all portions of the national security infrastructure had pointed to the primary object, other issues persisted: Energy security and clean development mattered. These issues linked, in turn, to reducing poverty and diminishing pollution. The United States was therefore working “with other major nations on the most effective measures to protect the environment.” With China, the United States would “work to increase our cooperation to combat disease pandemics and reverse environmental degradation.” Environmental damage, regardless of the presence or intent of any actors involved, presented a national security threat:

Environmental destruction, whether caused by human behavior or cataclysmic mega-disasters such as floods, hurricanes, earthquakes, or tsunamis . . . may overwhelm the capacity of local authorities to respond, and may even overtax national militaries, requiring a larger international response. These challenges are not traditional national security concerns, such as the conflict of

arms or ideologies. But if left unaddressed they can threaten national secu-
1056
rity.  

Like the NSS, the Bush Administration’s National Defense Strategy (“NDS”) reflected the new threat.  
1057
The NDS introduced new categorizations of global security challenges: “traditional,” “irregular,” “catastrophic,” and “disruptive.”  
1058
The 2008 NDS provides an expanded definition of potential security challenges, including space and cyber threats, natural disasters, pandemic diseases, and competition for resources.  
1059
The Obama Administration expanded further upon the vision set by the preceding administrations. The one and only NSS issued to date calls “for a comprehensive range of national actions” based on “a broad conception of what constitutes our national security.”  
1060
Almost every element of domestic and foreign policy plays some role. The document emphasizes the importance of greater economic strength, deficit reduction, better education, clean energy, scientific advances, and the development of new technologies, weapons systems, armed conflict, and diplomatic activity.  
1061
In this mix, the environment plays a key role: “Dependence upon fossil fuels,” the strategy states, “constrains our options and pollutes our environment. Climate change and pandemic disease threaten the security of regions and the health and safety of the American people. Failing states,” in turn, “breed conflict and endanger regional and global security.”  
1062
Global warming and climate variation could result in unprecedented levels of chaos. “The danger from climate change,” the NSS asserts, “is real, urgent, and severe. The change wrought by a warming planet will lead to new conflicts over refugees and resources; new suffering from drought and famine; catastrophic natural disasters; and the degradation of land across the globe.”  
1063
To respond to this threat, the United States would have to develop clean energy, encourage sustainable development, negotiate reductions in emissions, and focus on science and technology.  
1064
U.S. interests in the Arctic region almost entirely revolved around similar environmental concerns.

c. Expansion of the Traditional Framing

Critically, the expansion of the national security discourse to include non-traditional threats was not merely a surface change. It influenced federal law and policy and gave rise to new institutions, institutional relationships, and authorities. Equally important is the fact that climate change and other nontraditional threats were not relegated to a parallel sphere. Instead, concern about climate change, pandemic disease, terrorism, crime, and other issues was adhered directly to the existing national security infrastructure, resulting in its further expansion. The NSC, for instance, became tasked with looking at global climate change, with a subgroup developed specifically to focus on this area. The CIA introduced new initiatives focused on gathering and analyzing information about shifting natural resources. In 2008, the National Intelligence Council released *Global Trends 2025*, in which increased scarcity and global competition for resources are predicted to undermine U.S. security.

Along with these shifts, the military assumed a new role. The Bush Administration explained:

> Preparing for and managing [environmental destruction, whether caused by human behavior or cataclysmic mega-disasters such as floods, hurricanes, earthquakes, or tsunamis] requires the full exercise of national power, up to and including traditional security instruments. For example, the U.S. military provided critical logistical support in the response to the Southeast Asian tsunami and the South Asian earthquake until U.N. and civilian humanitarian responders could relieve the military of these vital duties.

To manage these threats, the military would have to expand and be given access to even more resources.

The specific arguments for a stronger military role have come to be articulated in three principal ways, which demonstrate how the initial environmental dialogue has translated into the national security infrastructure: the relationship between limited access to natural resources and conflict, the changing nature of the military

---

1069. BUSH NSS 2006, supra note 1002, at 47.
mission and its capabilities, and the role of environmental changes in undermining nuclear and conventional arms control. Each deserves brief discussion.

The first argument relates to the relationship between environmental degradation and violence. This divides into various sub-concerns, including the concern that increasing scarcity of natural resources elsewhere may result in intrastate violence and potential state collapse. A variation on this sub-concern posits that scarcity of resources may foment conflict between states, leading to regional instability. This sub-concern, which received early attention from the NSC, logically flowed from efforts to gain a better understanding of regions where democratic states might be encouraged to resist communist encroachment. Following the Cold War, attention turned to other potential generators of instability—such as access to energy, food, and water. In 1994, the CIA began funding the Political Instability Task Force, a panel of scholars that focused on the question of political crises around the world. The project grew from the work of Professor Ted Robert Gurr and generated five major reports on regional instability from 1955 to 2005.

The second argument relates to how climate change could affect the military’s mission and its capabilities. As articulated by the U.S. Army War College, the chief concern here is that climate change will influence where, when, why, and how the U.S. military operates. Navigation of the seas and territorial claims

1071. See id. at 133–35. An additional variation has since emerged with regard to aggressive steps that might be taken against the United States itself. Taken to an extreme, the argument anticipates complete chaos in the international environment, with significant implications for U.S. national security. See The Implications of Global Climatic Changes for International Security: Hearing on Energy as a Weapon Before the Subcomm. on Nat’l Sec., Emerging Threats, and Int’l Relations, 109th Cong. (2006) (statement of Dr. Peter H. Gleick, President of the Pacific Institute).

1073. Cf. Nat’l INTELLIGENCE COUNCIL, 2025, supra note 943, at vi (“The international system—as constructed following the Second World War—will be almost unrecognizable by 2025 owing to the rise of emerging powers, a globalizing economy . . . [and] growing energy, food, and water constraints . . .”).
1075. Id.
1077. PEW CTR. ON GLOBAL CLIMATE CHANGE, NATIONAL SECURITY IMPLICATIONS OF GLOBAL CLIMATE CHANGE 1–2 (2009), available at http://www.pewclimate.org/federal/memo/national-security-implications (“First, military facilities and personnel will be directly impacted: Sea level rise and taller storm surges will encroach on important coastal installations around the world. Increasing land area under drought will affect how and where U.S. forces acquire and transport water to support operations. Weather conditions will become more extreme in places where the local climate already presents serious operational challenges. Second, climate change portends a rise in the frequency of natural disasters. U.S. Navy ships provided critical logistical assistance in the aftermaths of Hurricane Katrina and the 2004 Indonesian tsunami, and calls for such assistance are likely to increase, both at home and abroad. Third, climate change will create new theaters of operation. For instance, the opening of the Arctic, which is rapidly losing sea ice, will force the U.S. military to deploy significant assets to this newly accessible, resource-rich area, where Russia’s military is already established and well equipped.”).
present a particular concern. Russia’s decision to claim ownership of some 1.2 million square kilometers of the Arctic, for instance, came to epitomize this new era—as did the Canadian response.1078 (The Canadian Prime Minister almost immediately stated that he intended to increase the country’s military presence in the Arctic—a decision with additional military implications in light of the navigability of the Northwest Passage.1079) Further affecting the military’s mission and capabilities is the potential for mass migrations and the spread of disease—and what role the military would play in such circumstances.1080

The third argument for a stronger military role relates to how environmental factors might undermine arms control.1081 A report commissioned by the Office of Net Assessment at the Department of Defense suggests that in a world of diminished resources, “warfare would define human life.”1082 The globe would become a world of warring states, within which armaments would rapidly spread: “[N]uclear arms proliferation,” one study suggests, “is inevitable . . . China, India, Pakistan, Japan, South Korea, Great Britain, France, and Germany will all have nuclear weapons capability, as will Israel, Iran, Egypt, and North Korea.”1083 In part because of the proliferation of arms and the increased firepower available, disruption and conflict could become “endemic features of life.”1084 The United Nations and other nongovernmental organizations will be affected.1085

Doomsday predictions like these made some, but not tremendous, headway—until 2005. On August 29 of that year, Hurricane Katrina hit the Gulf Coast of the United States.1086 In addition to widespread devastation of businesses and homes throughout the southern United States, the levee system outside New Orleans

1078. See CANWEST NEWS SERV., CANADA DRAWS LINE IN THE ICE OVER ARCTIC SEABED, CANADALCOM (June 30, 2007), http://www.canada.com/topics/news/national/story.html?id=a3822b19-7c35-41ae-86f8-6ed88b2d4f8d&k=88331 (“Canada’s sovereignty over the lands and waters of the Canadian Arctic is long-standing, well-established and based on historic title,” the Department of Foreign Affairs [said] . . . in response to reports that Russian scientists have amassed fresh geological evidence supporting their country’s claim to about 1.2 million square kilometers of the Arctic seafloor—and the potential oil riches that lie below.”).

1084. Id. at 22.

failed. Submerged, New Orleans became marked by civil unrest, some looting, and a perceived breakdown of local government. The military had to be brought in to help restore order.

The incident proved pivotal in backing claims as to the civil, military, and political implications of climate change. Not only was specialized equipment necessary, but the incident also raised the ultimate question of the federal government’s political legitimacy. The Bush Administration appeared slow to respond, dramatically undermining its status. Environmental writers almost immediately began citing Katrina as a demonstration of why climate change should be considered as a threat to national security. The resource allocation carrot could hardly be overlooked: “The sooner the national governments recognize climate change as the national security issue that it is,” one writer opined, “the faster it will receive the intellectual, financial, and diplomatic resources it merits.” Ignored in this analysis was the corresponding power and institutional growth that would have to accompany further expansion of the national security infrastructure.

The defense community responded to growing climate concerns. In 2005, the Department of Defense’s Defense Threat Reduction Agency (“DTRA”) Advanced Systems and Concepts Office commissioned a study based on the premise “that there is a need for an integrated, multi-disciplinary academic commitment to countering new and emerging security threats.” The initiative anticipated the need to generate new thinking on how the military could respond to global climate change. Two years later, the U.S. Army War College sponsored a conference titled: The National Security Implications of Global Climate Change. By 2007, military and non-military reports within the national security community began highlighting the severe national security challenges posed by climate change and, correspondingly, the need for an enhanced role for the military. One of the most

1087. See id. at 7–8 (“Four levee breaches occurred around New Orleans on August 29: two along the London Avenue Canal, one along the 17th Street Canal, and one along the Industrial Canal . . . . The floodwaters from the Industrial Canal levee breach submerged much of the Lower Ninth Ward and areas nearby . . . . The 17th Street Canal breach resulted in a slow-rising flood over a larger area. Several levees around New Orleans were overtopped adding to the flooding problems. Data from the U.S. Army Corps of Engineers (USACE) indicates that the breaches and overtopped levees flooded approximately 80 percent of the city to varying depths . . . .”).

1089. See id.

1092. DTRA was founded in 1998 to integrate and focus the capabilities of the Department of Defense to counter the threat of weapons of mass destruction. Id. at i.

prominent reports was signed by eleven military leaders from the Army, Air Force, Navy, and Marines, whose credibility was firmly grounded in their long experience in national security.\footnote{1095} “Global climate change,” the final report argues, “presents a new and very different type of national security challenge.”\footnote{1096} The language directly ties climate change to U.S. national security—and military—interests:

> The nature and pace of climate changes being observed today and the consequences projected by the consensus scientific opinion are grave and pose equally grave implications for our national security. Moving beyond the arguments of cause and effect, it is important that the U.S. military begin planning to address these potentially devastating effects. The consequences of climate change can affect the organization, training, equipping, and planning of the military services. The U.S. military has a clear obligation to determine the potential impacts of climate change on its ability to execute its missions in support of national security objectives.\footnote{1097}

In other words, “Projected climate change poses a serious threat to America’s national security.”\footnote{1098} In addition to natural and humanitarian disasters on a completely unprecedented scale: “The consequences will likely foster political instability where societal demands exceed the capacity of governments to cope.”\footnote{1099}

The members of the study recommended that the United States fully integrate the consequences of climate change into the country’s national security and national defense strategies.\footnote{1100} This meant the intelligence community should begin incorporating the consequences of climate change into its national intelligence estimate.\footnote{1101} The NSS should directly address the question, with specific guidance to military planners “to assess risks to current and future missions caused by projected climate change.”\footnote{1102} The next \textit{Quadrennial Defense Review} (“QDR”) should look at the capabilities of the U.S. military and respond to any potential consequences; specifically, “preparedness for natural disasters from extreme

\footnote{1096. \textit{Id.}}

\footnote{1102. \textit{Id.}}
weather events, pandemic disease events, and other related missions.”1103 The group recommended that the Department of Defense (“DOD”) enhance its operational capability by accelerating business processes and innovative technologies, which could, in turn, improve U.S. combat power through energy efficiency.1104 And the group called for the DOD to conduct an assessment of the impact of global warming on its worldwide military installations.1105

Although many members of the study were retired from active duty or no longer held positions within the defense infrastructure, their call for an expanded military role was echoed by those serving in office.1106 In July 2008, Secretary of Defense Robert Gates highlighted concern that “over the next twenty years and more certain pressures—population, resource, energy, climate, economic, and environmental—could combine with rapid cultural, social, and technological change to produce new sources of deprivation, rage, and instability.”1107 Simultaneously, he noted the military’s growing role in civil society in Iraq and Afghanistan, and growing concern about the “creeping ‘militarization’” of U.S. foreign policy: “This,” he concluded, “is not an entirely unreasonable sentiment.”1108 But in the event of contingency situations or natural disasters, the U.S. military was likely to be on the front line of defense.1109 Like Gates, Undersecretary of Defense for Policy, Michele Flournoy, underscored the threat posed by climate change.1110 Outlining DOD’s approach to the QDR, Flournoy focused on five threats: globalization, climate change, the coming youth bulge in the Mideast, increasing competition for natural resources, and the spread of destabilizing technologies.1111

Congress largely supported the expansion of national security to include climate change. In January 2009, former Senator John Warner of Virginia—who had served as a marine in Korea, then served as both Undersecretary and Secretary of the Navy, and who in 2007 co-sponsored the first carbon cap-and-trade bill to leave committee—spoke to the Senate Foreign Relations Committee.1112 He explained:

Leading military, intelligence, and security experts have publicly spoken out that if left unchecked, global warming could increase instability and lead to conflict in already fragile regions of the world. If we ignore these facts, we do

so at the peril of our national security and increase the risk to those in uniform who serve our Nation. It is for this reason that I firmly believe the United States must take a leadership role in reducing greenhouse gas emissions. Other nations are moving ahead and the United States must join and step to the forefront.\footnote{1113}

Framed as a national security concern, climate change could afford no opposition. Congress would undermine U.S. national security by not acting in this realm. To this end, the Senate Foreign Relations Committee, like the Senate Armed Services Committee, would have to take appropriate steps.

Calls to expand and reorient military capabilities in light of global warming arise not only from military and civilian personnel within the defense establishment. In 2007, yet another study came to a similar conclusion.\footnote{1114} Participating in the study’s discussions were scientists, scholars, and civilian political leaders, such as Leon Fuerth (former National Security Advisor to Vice President Al Gore), John Podesta (former Chief of Staff for President Bill Clinton), and James Woolsey (former Director of the CIA).\footnote{1115} The report paints a rather dire picture:

The United States can expect that climate change will exacerbate already existing north-south tensions, dramatically increase global migration both inside and between nations (including into the United States), spur more serious public health problems, heighten interstate tension and possibly conflict over resources, challenge the institutions of global governance, cause potentially destabilizing domestic political and social repercussions, and stir unpredictable shifts in the global balance of power, particularly where China is concerned. The state of humanity could be altered in ways that create strong moral dilemmas for those charged with wielding national power, and also in ways that may either erode or enhance America’s place in the world.\footnote{1116}

To the study’s participants, current definitions of “national security” appeared “woefully inadequate to convey the ways in which State authorities might break down in a worst case climate change scenario.”\footnote{1117} Disease, uncontrolled migration, crop failure, loss of access to clean water, and other concerns are likely to overwhelm the traditional instruments of national security—specifically, the military—as well as other elements of State power and authority.\footnote{1118}

The study considered three scenarios: expected, severe, and catastrophic climate change.\footnote{1119} It found that for even the first scenario—an expected increase of

average global temperature by 1.3 degrees Celsius by 2040—substantial national security implications existed (e.g., heightened internal and cross-border tensions caused by large-scale migrations; conflict sparked by resource scarcity; increased disease with economic consequences; and geopolitical reordering). With respect to severe climate change—understood as an average global temperature increase of 2.6 degrees Celsius—the study found more severe consequences: It predicted pandemic disease and significant stresses on internal state cohesion, including in the United States, both as a result of a dramatic rise in migration and changes in agricultural patterns and water availability... Armed conflict between nations over resources, such as the Nile and its tributaries, is likely and nuclear war is possible. The social consequences range from increased religious fervor to outright chaos.

In the catastrophic scenario—an average global temperature increase of 5.6 degrees Celsius by 2100—the group found “strong and surprising intersections between the two great security threats of the day—global climate change and international terrorism waged by Islamist extremists.” For the group, global warming, although couched as one pressing national security concern among many, clearly stood as the most important. In this dialogue, the catastrophic nature of climate change has been touted as justification for considering environmental degradation as a national security threat. Perhaps one of the most salient examples comes from the Bulletin of the Atomic Scientists. In January 2007, the same year as the two above-mentioned

1120. Id.
1121. Id. at 7.
1122. Id. at 10 (“In the coming decade the United States faces an ominous set of challenges for this and the next generation of foreign policy and national security practitioners. These include reversing the decline in America’s global standing, rebuilding the nation’s armed forces, finding a responsible way out from Iraq while maintaining American influence in the wider region, persevering in Afghanistan, working toward greater energy security, re-conceptualizing the struggle against violent extremists, restoring public trust in all manner of government functions, preparing to cope with either naturally occurring or manmade pathogens, and quelling the fear that threatens to cripple our foreign policy—just to name a few. Regrettably, to this already daunting list we absolutely must add dealing responsibly with global climate change. Our group found that, left unaddressed, climate change may come to represent as great or a greater foreign policy and national security challenge than any problem from the preceding list.”).
1123. See About Us, BULL. OF THE ATOMIC SCI., http://thebulletin.org/content/about-us/purpose (last visited Oct. 20, 2011). Established in 1945 by scientists and engineers who worked on the Manhattan Project, the publication sought to warn the public about the threat posed by nuclear weapons. Id. Two years after its founding, the Bulletin began displaying a clock on its cover, with the idea of conveying the countdown to total annihilation. See id. The decision to move the minute hand reflects the decision of the Board of Directors, in consultation with the Board of Sponsors, which currently includes some eighteen Nobel Laureates. Id.
reports, the *Bulletin* moved the minute hand of its doomsday clock two minutes closer to midnight.\textsuperscript{1125} The grounds on which it did so related to the environment:

The dangers posed by climate change are nearly as dire as those posed by nuclear weapons. The effects may be less dramatic in the short term than the destruction that could be wrought by nuclear explosions, but over the next three to four decades climate change could cause irremediable harm to the habitats upon which human societies depend for survival.\textsuperscript{1126}

The *Bulletin* continued,

Global warming poses a dire threat to human civilization that is second only to nuclear weapons. Through flooding and desertification, climate change threatens the habitats and agricultural resources that societies depend upon for survival. As such, climate change is also likely to contribute to mass migrations and even to wars over arable land, water, and other natural resources.\textsuperscript{1127}

Stephen Hawking, a world-famous professor of mathematics at the University of Cambridge and a member of the *Bulletin*’s Board of Sponsors, explained,

As scientists, we understand the dangers of nuclear weapons and their devastating effects, and we are learning how human activities and technologies are affecting climate systems in ways that may forever change life on Earth. As citizens of the world, we have a duty to alert the public to the unnecessary risks that we live with every day, and to the perils we foresee if governments and societies do not take action now to render nuclear weapons obsolete and to prevent further climate change.\textsuperscript{1128}

The *Bulletin*’s decision to include climate change in its calculation of the most pressing issues facing not only the United States, but also humanity, reflects an approach to security that looks at the potential manifestation of the threat, devoid of any individual actor’s intent. This is security as human security, on a massive scale. Like nuclear weapons, such threats undermine state sovereignty, and require a central, militarized response.

It would be inappropriate to end this brief discussion of the securitization of climate change without noting that there is something circular—self-perpetuating—about the military being seen as the solution. Even as the U.S. Army War College pointed to the national security system “as a driver of solutions,” it recognized that the military was a major part of the problem—the DOD is “the nation’s single

\textsuperscript{1126} Id.

\textsuperscript{1127} Id.

\textsuperscript{1128} Id.
largest emitter of carbon dioxide.” If this statement is accurate, it is more than a little ironic that the United States’ solution to climate change is to increase the might of the institution that contributes so significantly to the problem, in the process ensuring the protection of its institutional interests.

2. Biodefense

Like climate change, concern about the proliferation of weapons of mass destruction, and biological weapons specifically, predates the end of the Cold War. Over the past two decades, however, the conversation about biological weapons has shifted from one focused on their development, acquisition, and use to one of “biodefense,” which pairs the threats posed by naturally occurring pandemic disease and biologically engineered weapons. Both concerns have, in turn, become folded into the national security framework.

The origins of the biodefense concern are rooted in manmade weapons. The end of the Cold War heralded concern that rogue states, or non-state actors would gain access to biological agents. Senators Sam Nunn, Richard Lugar, and Pete Dominici quickly expanded the Cooperative Threat Reduction (“CTR”) program to restrict the flow of information and materials from the former Soviet republics. The model to be adopted was one of traditional national security: the Pentagon would assume lead responsibility for protecting the country from the proliferation of weapons.

Despite the advances made by CTR, isolated incidents indicated that non-state actors were beginning to develop an interest in biological agents. In 1995, for instance, Aum Shinrikyo—a Japanese religious group—unsettled policymakers when it released sarin nerve gas on the Tokyo subway, killing twelve people. A few years later, Larry Wayne Harris, an American citizen, obtained plague and

[N]ew deadly challenges have emerged from rogue states and terrorists . . . . [T]he nature and motivations of these new adversaries, their determination to obtain destructive powers hitherto available only to the world’s strongest states, and the greater likelihood that they will use weapons of mass destruction against us, make today’s security environment more complex and dangerous.”).
1134. Id.
anthrax bacterium for the purpose of disseminating the biological agents on U.S. soil.\textsuperscript{1136}

These incidents represented a broader trend. Before 1997, the FBI conducted approximately a dozen annual investigations into efforts by domestic entities to develop, obtain, or use weapons of mass destruction; in 1997, the FBI initiated more than seventy such investigations.\textsuperscript{1137} In 1998, it opened more than 180 cases.\textsuperscript{1138} While a significant number of these turned out to be hoaxes, there were enough cases of actual attempts to raise concern.\textsuperscript{1139} By January 1999, the Monterey Institute for International Studies had recorded a total of more than 400 similar instances in which non-state actors had tried to obtain or use weapons of mass destruction.\textsuperscript{1140} Al Qaeda’s stated intent of developing similar weapons, in conjunction with the anthrax mailings in autumn of 2001, augmented concern.\textsuperscript{1141}

In conjunction with growing concern about the proliferation of biological weapons, the threat posed by naturally occurring diseases received increasing attention. Three outbreaks accelerated the conversation. The first, known as influenza subtype H5N1 (“Bird Flu”), erupted in Hong Kong in 1997.\textsuperscript{1142} Although H5N1 only killed six people in the Hong Kong outbreak, the virus has since been able to spread, becoming both epizootic and panzootic, with mutations dramatically increasing the patterns of mortality.\textsuperscript{1143} The disease has been compared to the Spanish flu, also avian in origin, which swept the globe between 1918 and 1919.\textsuperscript{1144} More than 1 billion worldwide fell ill from the 1918 outbreak, with between 50 and 100 million people dying from the disease or related condi-

\textsuperscript{1136} Jessica Eve Stern, \textit{Larry Wayne Harris, in TOXIC TERROR}, supra note 1135, at 227–46. While investigators later realized Harris obtained only a harmless anthrax strain, as Stern concludes, Harris posed a real and substantial threat to American national security. \textit{Id.}

\textsuperscript{1138} Parker-Tursman, supra note 1137.

\textsuperscript{1139} See Weiner, supra note 1137.

\textsuperscript{1143} At its first outbreak in 1997, most deaths occurred amongst patients older than age thirteen, but by 2006, the fatality rate for children younger than fifteen had reached eighty-nine percent. See Writing Comm. of the World Health Org., \textit{Avian Influenza A (H5N1) Infection in Humans}, 353 N. ENGL. J. MED. 1374, 1378 (2005), \textit{available at} http://content.nejm.org/cgi/content/full/353/13/1374. There appear to be a handful of questionable cases in which the virus may have been transmitted between people (mother and child, and patient to nurse, but unique situations). \textit{See id.}

What has caused alarm is that the mortality rate of recent avian flu outbreaks—almost sixty percent—is substantially higher than the Spanish flu, which had a mortality rate of about five percent.\(^{1146}\)

The second disease outbreak that spurred biodefense efforts—the 2003 outbreak of severe acute respiratory syndrome (“SARS”) in southern China—reflected a similar lack of human agency in its creation and a correspondingly high level of mortality.\(^{1147}\) Aided by a small group of accidental “superspreaders,” the disease became global within days of its first appearance.\(^{1148}\) Approximately 8000 people in twenty-nine different countries contracted the disease, 800 of whom died.\(^{1149}\)

The third incident stemmed from a June 2009 outbreak of another influenza subtype, known as H1N1 (“Swine Flu”).\(^{1150}\) Although the pandemic proved less devastating than initially predicted, the discussion surrounding the disease raised significant alarm about the potential impact of naturally occurring diseases.\(^{1151}\)

As with climate change, the threat of pandemic disease became incorporated into the existing national security infrastructure. In 2000, the National Intelligence Council released an estimate focused on the threat of global infectious disease and its implications for the United States.\(^{1152}\) The DTRA’s Advanced Systems and Concepts Office, founded to concentrate on the threat of weapons of mass destruction, considered, as an aspect of its national security program, the large-scale containment of individuals infected with highly contagious disease in a large

\(^{1145}\) See generally The 1918–19 Influenza Pandemic: The Urban Impact in the Western World (Fred R. van Hartesveldt ed., 1992) (estimates at least 40 million); Niall Johnson, Britain and the 1918–19 Influenza Pandemic 103 (2007) (estimating up to 100 million).

\(^{1146}\) Compare Johnson, supra note 1145, at 103 (describing the mortality rate of the Spanish flu), with Cumulative Number of Confirmed Human Cases of Avian Influenza A (H5N1) Reported to WHO, 2003–2011, World Health Org. (Oct. 10, 2011), http://www.who.int/influenza/human_animal_interface/EN_GIP_LatestCumulativeNumberH5N1cases.pdf (describing the mortality rate of the recent avian flu outbreak). As of October 10, 2011, the World Health Organization reported 332 deaths out of 566 cases of H5N1 in humans. Id.

mimicking climate change, the biodefense discourse carried with it actual changes to institutional design, institutional relationships, and authorities. Many of these alterations linked the threat posed by both engineered weapons and naturally occurring outbreaks. The Public Health Security and Bioterrorism Preparedness and Response Act of 2002, for instance, addressed both bioengineered weapons and naturally occurring outbreaks within a national security rubric.1158 The Homeland Security Act of 2002 created the Department of Homeland Security (“DHS”), whose primary mission is to prevent further attacks within the United States, to reduce the domestic vulnerability to terrorist attacks, and to assist in recovery from the same.1159 DHS, however, continues to view its role in considerably more expansive terms. Its website states that “[i]n the event of a terrorist attack, natural disaster or other large-scale emergency, the Department of Homeland Security will . . . assume[] primary responsibility for ensuring that emergency response professionals are prepared . . . .”1160 DHS, through its National Response Plan underscored the dual role to be played by the Department: to help “in the important homeland security mission of preventing terrorist attacks within the United States; reducing the vulnerability to all natural and man-made hazards; and minimizing the damage and assisting in the recovery from any type of incident that occurs.”1161 Homeland Security Presidential Directive 10 suggested that the traditional public health approach could no longer form the basis for the State’s response to the threat.1162 Health care providers and public health officials were to be considered part of the national security infrastructure—on the very front lines of

A new biodefense program would therefore combine and strengthen the federal government’s ability to respond to both biological weapons and naturally occurring disease.\footnote{1163} DHS and the White House, when presenting the \textit{2007 National Strategy for Pandemic Influenza}, explained that the federal government intended to link the two concerns: “We at DHS are focused on multi-use institutions that we can put into place for whatever emergencies arise.”\footnote{1165} The association between pandemic disease and biological weapons was not an accident; the very reason that the government released the pandemic design was to redefine public health as a national security priority.\footnote{1166} The Centers for Disease Control and Prevention, proposing broader authorities for itself, explained: “Stopping an outbreak—whether it is naturally occurring or intentionally caused—requires the use of the most rapid and effective public health tools available.”\footnote{1167} Myriad further examples present themselves.

Like the climate change dialogue, the folding of public health into the national security structure has resulted in an expanded role for traditional national security institutions and, in particular, for the armed forces. To some extent, looking to the military as a key player derives from the biological weapons component of the threat. The military has sophisticated ways to identify agents and to respond to protect individuals who might be exposed.\footnote{1168} It may have access to a broader range of vaccines, antibiotics, and prophylactic measures than civilian agencies. It has knowledge about shielding devices and familiarity with how to protect individuals before and after exposure.\footnote{1169} As with climate change, the involvement of the military also stems from institutional capabilities, should the potential threat become manifest. The military may be the only institution with the necessary technology, resources, manpower, and command and control devices to organize response to a debilitating crisis on a massive scale.

Accordingly, even as it enacted the Homeland Security Act of 2002, Congress explained that the military could be used in the event of any national emergency,

\end{itemize}
including natural disasters. Homeland Security Presidential Directive 10 considers the armed forces to be essential to the country’s ability to defend itself against disease. Following Hurricane Katrina, Congress explicitly granted the authority to the military to respond in the event of pandemic disease. The Defense Authorization Act of 2007 renamed the Insurrection Act as “Enforcement of the Laws to Restore Public Order.” The new language gave the President the ability to make use of the armed forces in the event of “natural disaster, epidemic, or other serious public health emergency, terrorist attack or incident, or other condition”—without any contact or collaboration with state officials. The new measure quickly earned the wrath of state governors and, eventually, was repealed. But the incident illustrated a shift in the view of the military’s role in responding to pandemic disease. Now, use of title 32 troops and title 10 forces to respond to naturally occurring outbreaks of disease enjoys broad support.

At some level, the confluence of pandemic disease and biological weapons makes sense: both entail viral or bacteriological threats. Similar institutions would likely be the first to become aware of the existence of the threat—regardless of whether manufactured or naturally occurring. At the onset, it may be impossible to tell the difference. Moreover, such diseases may require the same response and may be equally devastating.

But the collapse of these two areas within the national security and military infrastructure drains attention and resources away from civilian institutions, which have a broader perspective on the evolution of public health. The relationship between these institutions and the public is completely different than that which

Research Serv., RL33095, Hurricane Katrina: DOD Disaster Response 1 (2005), http://www.fas.org/sgp/crs/natsec/RL33095.pdf (stating that in regard to natural disasters “the role of the National Guard is critical in the maintenance of civil order, the provision of logistical support, and the coordination of rescue and relief effort.”); Alfred J. Sciarrino, The Grapes of Wrath and the Speckled Monster, Part III: Epidemics, Natural Disasters and Biological Terrorism—The Federal Response, 10 Mich. St. U. J. Med. & L. 429, 462 (2006) (“The suggestion to use the military in a national emergency is not merely academic, as in the immediate aftermath of Katrina, Americans saw the breakdown of civilian leadership, especially by the Department of Homeland Security, charged with the primary responsibility of responding to ‘a terrorist attack, natural disaster or other large-scale emergency,’ and by FEMA, the lead agency under the Department of Homeland Security. Only the military offered a wide range of worthwhile assistance, including proper search and rescue measures; recovering the bodies of those killed in the storm or afterward; immediately attempting to bolster and secure the levees; providing for and delivering food, shelter, and water; and restoring law and order.”) (internal footnotes omitted).
persists with respect to the highly secretive, non-transparent, coercive entities that mark the national security domain.

3. Drugs

The climate change dialogue was initially driven largely by liberal, progressive forces eager to generate attention on what was perceived as a pressing concern. The collapse between pandemic disease and biological weapons, and the reframing of both within the national security dialogue, can be seen as led by national security institutions themselves: entities previously concerned with the containment of communism generally, and the U.S.S.R. in particular, turned to proliferation and, from that, to pandemic disease. In contrast, the incorporation of drugs and then crime into the national security infrastructure can be seen largely as a function of the conservative movement. Together these examples demonstrate a remarkable confluence that has generated an ever-expanding view of the field.

Like climate change and biological weapons, concern about drug trafficking predates the start of the fourth epoch. Between 1930 and 1970, the federal government introduced a range of provisions aimed at preventing drug abuse on an ad hoc basis. It was not until the Controlled Substances Act of 1970 that Congress brought the disparate provisions under one umbrella. Administrative efforts to attack the drug problem swiftly followed. The 1970s, for instance, witnessed the formation of the Special Action Office for Drug Abuse Prevention, the Commission on Marihuana and Drug Abuse, the Strategy Council on Drug Abuse, a Cabinet Committee on International Narcotics Control, and the Special Action Office for Drug Abuse Prevention. Emphasis was on reducing the demand for drugs and ensuring the existence and operation of adequate treatment programs; on both fronts, the federal government sought to lead the way. President Nixon declared “all-out global war on the drug menace.” Considering drug abuse to be “one of the most vicious and corrosive forces attacking the foundations of American society,” Nixon asserted, “We must fight it with all the resources at our command.”

1184. Shull, supra note 1177, at 496.
1186. Id.
command” and allocation of significant resources to the effort. In 1969, the federal government spent $36 million fighting drugs; by 1974, it was spending $257 million per year, an amount still considered deficient.\textsuperscript{1187}

In the 1980s, the government’s approach to the subject matter shifted: it became more punitive, with a growing emphasis on law enforcement and interdiction.\textsuperscript{1188} Users themselves became the problem, and the criminal law—not social welfare programs—became the solution.\textsuperscript{1189} With this shift came the question of resources. During the third epoch, national security had achieved preeminence among other concerns, and the nation’s resources were allocated accordingly. The military had grown to a point where the armed forces could assist law enforcement.\textsuperscript{1190} Thus, when President Reagan declared war on drugs in 1982,\textsuperscript{1191} Congress was ready to pass new legislation, allowing the military to support law enforcement in the war by providing training, intelligence, and equipment.\textsuperscript{1192} With this new framing, drugs quickly became enveloped into the national security infrastructure.

In 1986, Reagan issued a new national security decision directive entitled \textit{Narcotics and National Security}.\textsuperscript{1193} Expanding global narcotics regimes threatened U.S. national security.\textsuperscript{1194} The framework in which that threat was presented was consistent with the framework of the third epoch—containment of the threat posed by communism to democratic states:

Of primary concern are those nations with a flourishing narcotics industry, where a combination of international criminal trafficking organizations, rural insurgents, and urban terrorists can undermine the stability of the local government; corrupt efforts to curb drug crop production, processing, and distribution; and distort public perception of the narcotics issue in such a way that it becomes part of an anti-U.S. or anti-Western debate.

\begin{thebibliography}{1194}
\bibitem{1187} Id.
\bibitem{1188} Shull, \textit{supra} note 1177, at 496.
\bibitem{1189} Id.
\bibitem{1194} \textit{See id.} at 1.
\end{thebibliography}
While these problems are endemic to most nations plagued by narcotics, their effects are particularly insidious for the democratic states of the Western Hemisphere.\textsuperscript{1195}

For Reagan, the narcotics trade (or narco-trafficking) threatened “the integrity of democratic governments by corrupting political and judicial institutions.”\textsuperscript{1196} Drug organizations, moreover, had taken over foreign media outlets, reducing the ability of friendly regimes to publicly cooperate with the United States in its counter-narcotics operations.\textsuperscript{1197} Reagan recognized the links between drug trafficking, illicit arms sales, and terrorism, even as he also noted that several nations themselves were involved in the drug trade.\textsuperscript{1198} Of paramount importance was the threat posed to democracy.\textsuperscript{1199} The DOD, CIA, State Department, and others were to immediately incorporate counter-narcotics into their purview.\textsuperscript{1200}

The tumultuous events that marked the ending of the Cold War in 1989 ushered in a new opportunity. The drug war, like climate change, stood poised and ready to take advantage of the new environment. President George H.W. Bush announced on September 6, 1989 that he was significantly escalating the war on drugs.\textsuperscript{1201} Restricting the flow of cocaine into the United States had become a “major foreign policy objective.”\textsuperscript{1202}

The rationale of the third epoch continued to dominate, but it expanded. The question was not merely one of preventing drugs from flowing into the United States. Bush evinced concern that the drug trade could potentially destabilize friendly governments.\textsuperscript{1203} “[I]t is,” he suggested, “imperative for our own well-being and the development of democratic and economically stable governments around the world that this problem be dealt with aggressively.”\textsuperscript{1204} The United States would focus on the Western Hemisphere and, in particular, the Andean drug cartels; initial emphasis on Colombia could later be expanded to Peru and

\end{thebibliography}
Bolivia. The DOD, the CIA, and the State Department would work in parallel with the White House to ensure progress on this front.

The war was not limited to military—or paramilitary—operations. Law enforcement continued to play a role. Bush sent a request to Congress for an additional $1.5 billion that would be used to enlarge the criminal justice system to address the flow of drugs inside the United States. But the framing clearly involved the broader threat to U.S. interests: “Drugs,” the National Drug Control Strategy declared, “are a major threat to our national security.”

Like the environmental discourse, following the fall of the Berlin Wall, the war on drugs became enveloped in the national security conceptualization. A slew of academic articles challenged traditional concepts of security and considered the application of the national security framework to narco-trafficking. The military had already been involved in a support capacity. The question was one of U.S. national security—in response to which the existing infrastructure and substantial resources could be directed. By 1993, the federal government was spending some $12 billion per year. President Clinton explained, “[T]he United States considers the operations of international criminal narcotics syndicates as a national security threat requiring an extraordinary and coordinated response by civilian and military agencies involved in national security . . . .” Like his predecessor, Clinton focused on Andean drug trafficking.

The United States would seek to destroy organizations engaged in narco-trafficking. Domestically, emphasis would again be placed on drug treatment.

4. Crime

Like climate change, biodefense, and the drug war, the war on crime predates the end of the Cold War. Attorney General Robert Kennedy’s war on organized crime was followed by President Lyndon B. Johnson’s war on “crime and disorder.” In 1968 State of the Union Address, Johnson urged Congress to “help the cities and the States in their war on crime to the full extent of its resources and its constitutional authority.” Richard Nixon subsequently proceeded to conduct a war between “peace forces” and the “criminal forces,” or the enemy within, as emphasis shifted to eliminating crime by incapacitating those engaged in it.

To some extent, labeling criminal law reform as “war” merely reflected the dominance of the national security discourse during the third epoch. States were tasked with developing “battle plans” for reducing crime as a precursor for federal funding. Sure enough, within a few years of proclaiming a war on crime, the issue sat atop the domestic agenda. But due to the dominance of the primary national security aim—namely Soviet containment—the movement against crime initially gathered only limited momentum. The National Crime Commission of 1967 and its successor, the Law Enforcement Assistance Administration (“LEAA”) Commission on Standards and Goals of 1973, produced few results. The failure of these bodies led Gerald Caplan, of the National Institute on Law Enforcement and Criminal Justice, to point out that in the decade since the war on crime had begun, the United States had become subject to more crime than

---

1224. See, e.g., KLUN, supra note 1206, at 3 (“The United States[] [has a] thirty-plus year history in fighting a war on drugs [offering researchers] unique insight in addressing . . . non-traditional [national security] threats.”).
1231. See id. at 7–8.
anywhere else in the world and significantly more than it had suffered in 1964.\textsuperscript{1232}

Following the Cold War, however, crime was folded directly into the national security infrastructure. Transnational and organized crime generated substantial notice. This led to significant alterations in the criminal justice system as a whole because, while the target may have been criminal syndicates, the primacy of national security reverberated through every level of government. Opposition to new proposals roughly translated into being “soft” on crime—a label uncomfortably close to being pro-criminal, and therefore, a position no politically elected representative could adopt. This war on crime shared one of the chief characteristics of the more traditional approaches to national security: The burden of persuasion shifted to those resisting new measures to demonstrate that the new measures’ introduction would \textit{not} lead to greater security or would \textit{not} lead to more crime. Either would be a very difficult case to make.

\textit{a. The War on Crime}

New measures rapidly proliferated within the national security rhetoric.\textsuperscript{1233} As one commentator later noted,

The war on crime has been fought on many fronts, and with many weapons. Most dramatically, it has brought us the resurgence of capital punishment as a measure for the permanent incapacitation of violent predators. Less dramatically, but more pervasively, Draconian laws combating the plague of violent recidivism have pursued a similar strategy of incapacitation.\textsuperscript{1234}

In 1996, the Antiterrorism and Effective Death Penalty Act, introduced in the wake of the Oklahoma City bombing, limited habeas corpus for ordinary crime.\textsuperscript{1235} Scholars considered this stance to have been largely driven by a war mentality with regard to crime—one with many different, substantive impacts on the practice of criminal law.\textsuperscript{1236} “The right to counsel,” one practicing attorney concluded, “is being altered, warped, or limited, depending upon one’s perspective.”\textsuperscript{1237} The attorney, Albert Krieger, continued: “The question that the practicing criminal defense lawyer must ask is whether the independence that has been the rod and the staff of the advocate has been, and continues to be, eroded by our times, our

\textsuperscript{1232} See \textit{id.} at 3 (“[W]e have more crime than any other place in the world, more this year than last, and much, much more than we had in 1964 when Senator Goldwater became the first presidential candidate to argue that the federal government must do something about crime in the streets.”).

\textsuperscript{1233} See generally BARRY BUZAN ET AL., SECURITY: A NEW FRAMEWORK FOR ANALYSIS (1998).

\textsuperscript{1237} \textit{Id.}
troubles, our fears."  

Myriad dangers, ranging from conspiracy and money laundering charges to obstruction of justice charges, awaited the criminal defense attorney in a system marked by steadily expanding powers, lowered standards, and few to withstand the tide.  

Other scholars followed suit, arguing that the war on crime had eroded many of the most basic protections in the criminal law system:

As representatives of both political parties compete to show which is the toughest on crime, the criminal justice systems in the United States have become so result-oriented that little attention is paid to the fairness and reliability of the process which leads to those results.

A key problem among those associated with shifting due process standards was the war’s impact on equal justice for individuals from non-white ethnic backgrounds or living at lower socio-economic standards. The reach of these changes into society was substantial: approximately one-third of all African-American men between the ages of eighteen and thirty found themselves under supervision.

Professor Stephen Bright estimated that by the turn of the century, half of all black men would be in prison, probation, jail, or on parole.

In terms of sheer numbers, it would be hard overestimate the war on crime’s impact on society. In 1970, the prison and jail population registered approximately 300,000 inmates. By 2001, more than 2,000,000 were held in facilities, with another 4,000,000 under some form of penal control including parole and probation—some three percent of all American adults. By 2008, scholars, writing about the pyrrhic war of the preceding three decades, noted that “the society-altering impact of this war reaches far beyond flat numbers.” They suggested that a fundamental transformation had occurred:

The war’s impact has been most devastating on those individuals swept up by...incarceration...but it is not confined to them. This impact has instead extended to how society views governance, reshaping not only a wide range of social institutions but also the way we conceive of ourselves. The very concept of policing has changed, as has the place of crime in electoral politics;

increasingly, too, schooling, public health, and social welfare overlap with the criminal justice system.\textsuperscript{1247}

Myriad examples of ways in which crime became central to the national security infrastructure present themselves. The military, the intelligence community, the NSC, and other traditional instruments are now directed towards crime: DTRA’s Advanced Systems and Concepts Office, for instance, has begun to consider assisting law enforcement through developing high-technology crime-fighting as one of its central aims.\textsuperscript{1248} DOD, through the Defense Advanced Research Projects Agency (“DARPA”), holds meetings and organizes workshops to discuss technology research, development, and “deployment” that could help to reduce crime.\textsuperscript{1249} The juxtaposition of the military focus and the expanded emphasis on criminal matters is striking. DTRA explained,

As a mission-driven organization tasked with integrating and focusing capabilities to address threats to national security, the Department of Defense has a vested interest in improving the functional performance of the national security enterprise in order to respond to the challenges imposed by threats today and in the future.\textsuperscript{1250}

In this conception, the key stakeholders include “state and local law enforcement agencies.”\textsuperscript{1251}

DTRA is not alone in its attention to organized crime as an element of national security. By the time George W. Bush took office in 2001, the NSC included policy-coordinating committees focused not only on drug control, infectious disease, and biodefense, but also on organized crime.\textsuperscript{1252}

The Obama Administration has also focused on crime, suggesting that global criminal networks “foment insecurity abroad and bring people and goods across our own borders that threaten our people.”\textsuperscript{1253} For the Obama Administration, homeland security, synonymous with national security, is grounded in ordinary law enforcement and, as such, focuses on both individual criminals and criminal organizations.\textsuperscript{1254} The issue further implicates U.S. foreign policy, which will henceforward be based in part on “an aggressive and affirmative development agenda and commensurate resources” that would strengthen regional partners and

\end{thebibliography}
help the United States to counter global criminal networks. Because crime is classified as one of many threats with no borders (along with climate change and pandemic disease), such international cooperation is vital to U.S. success.

b. The “Muddy Waters” Problem

The strongest argument put forward for including organized crime in the national security infrastructure relates to what I consider a “muddy waters” problem: i.e., terrorism, drugs, and crime are not always easily distinguished and, in fact, often reflect different aspects of the same phenomenon. One aspect of this is illustrated by the expansion of the Foreign Intelligence Surveillance Act of 1978 (“FISA”) to the criminal realm.

The entire purpose of enacting FISA was to preserve a distinction between criminal law and national security concerns. Following the attacks of September 11, however, that wall was deliberately removed. This brought with it broader application of FISA—one, which was determined in 2002 to be legitimate, even where the primary aim of the investigation in question was criminal in nature.

The nexus between terrorism, foreign intelligence, and criminal activity similarly reflected in the phenomenon of narco-terrorists. Drug Enforcement Agency Administrator William Asa Hutchinson explained to Congress that this intersection undermines U.S. national security. Hutchinson defined the class of narco-terrorism as one “in which terrorist groups, or associated individuals, participate directly or indirectly in the cultivation, manufacture, transportation, or distribution of controlled substances and the monies derived from these activities.” He cited as examples: Cocaine trafficked by the Revolutionary Armed Forces of Colombia (“FARC”), opium production in Afghanistan (overseen by the Taliban), the methamphetamine and heroin trafficking efforts of the United Wa State Army in Burma, trafficking conducted by the Kurdistan Workers Party (“PKK”) in southeastern Turkey, and Sendero Luminoso’s “revolutionary tax” on
Hutchinson’s recognition of the links between different threats, and the subsequent issues raised for States, reflects in the international environment. Since 1998, when the United Nations (in a special session of the General Assembly) adopted a political declaration expressing concern about the growing links between drugs, crime, and terrorism, international instruments have recognized the link between drug production/trafficking and terrorism.

One of the reasons terrorism, drugs, and crime are considered within the national security realm is because of the challenge each poses to state sovereignty. Each can essentially create an alternative form of coercive power, which operates outside legal and political structures. Organizations can use the massive assets generated from illegal drug trafficking to infiltrate the political structures. Where unsuccessful, violence can be used in place of economic inducements, in the process rendering legal structures obsolete.

FARC, for instance, is believed to earn between $500 and $600 million per year from illegal drug trafficking. The group controls a significant portion of the worldwide market: according to the U.S. Department of Justice, FARC supplies more than fifty percent of the global cocaine supply. At its height, according to U.S. Southern Command, FARC boasted 17,500 fighters who carried out a systemic campaign of violence and intimidation. The Colombian Minister of Justice, Guillermo Plazas Alcid, underscored the challenge posed to state sovereignty.

For Alcid,

Illicit drug traffic menaced the health and well-being of individuals, spread corruption, abetted criminal conspiracy and subverted public order. It threatened the sovereignty and security of States and disrupted the economic social and cultural structure of society. In particular circumstances, it generated or supported other serious forms of organized crime.

1263. Id.
So not only is there a link between terrorism, drugs, and crime, but in some situations, the presence of such activities gives rise to other forms of criminal activity. The attendant power held by individuals outside of the state structure threatens state sovereignty.

Increasingly, the types of weapons and equipment employed by such criminal organizations replicates the type of devices used by the State. In November 2006, for instance, the U.S. Coast Guard seized its first semi-submersible vessel ninety miles off the Pacific coast of Costa Rica.1270 Labeled “Bigfoot-1,” rumors about the existence of vessels like it had circulated for years, but none had been captured.1271 By 2007, more than forty such sea craft had been spotted, with three times that number identified the following year.1272 The forty- to eighty-foot vessels, built by Columbian drug cartels, are capable of carrying up to four people and between four to twelve metric tons of cocaine.1273 “What worries me,” reflected Admiral Jim Stavridis, Commander, U.S. Southern Command, “is if you can move that much cocaine, what else can you put in that semi-submersible. Can you put a weapon of mass destruction in it?”1274

Drug cartels are not the only non-state actors to try to acquire such vessels. Police recently discovered the next generation of fully submersible vessels in Ecuador, apparently linked to FARC.1275 The 100-foot long, air-conditioned craft

1274. Id.

1275. See Sylvia Longmire, Border Security Narco Wars Today: Creativity in a Bad Cause, HSTODAY,US (Mar. 15, 2011), http://www.hstoday.us/focused-topics/border-security/single-article-page/narco-wars-today-creativity-in-a-bad-cause.html (“The sophisticated vessel...had a conning tower, periscope and air conditioning system...This was the first seizure of a...fully operational submarine built to facilitate trans-oceanic drug trafficking.”); P-3 Subhunters Using ASW Gear to Find Narco-Subs?, DEFENSE TECH (Jan. 14, 2011), http://defensetech.org/2011/01/14/p-3-subhunters-pressed-into-service-to-find-narco-sub/ (“[P]olice and soldiers discovered a 100-foot long, air-conditioned sub estimated to be able to carry 10 tons of cargo...Rumor has it these vessels are designed and built with serious help from the leftist Colombian rebel group known as the FARC.”).
could carry up to 10 tons of cargo.\textsuperscript{1276} The Sea Tigers, a unit within the Liberation Tigers of Tamil Eelam (“LTTE”), appears also to have developed at least three semi-submersibles in Sri Lanka.\textsuperscript{1277} The State Department lists both FARC and the LTTE as foreign terrorist organizations.\textsuperscript{1278}

Like the groups themselves, these vessels straddle the intersection of criminal law, anti-drug statutes, and national security. They represent a world where the lines are increasingly blurred. And they show the tension between a national security system based on intent-analysis—where the institutional and legal framework is determined by the individual engaged in illegal activity—and one increasingly based on the act itself, including its risks and consequences.

The result of the shift to a risk-based approach has been the steady expansion of the national security infrastructure. The Navy, for example, is rumored to be using P-3s (anti-submarine and maritime surveillance aircraft) and anti-submarine warfare against civilian targets off shore.\textsuperscript{1279} U.S. Southern Command explains, “Illegal activities associated with illicit trafficking . . . [represent] a significant threat to security and stability in the Western Hemisphere.”\textsuperscript{1280}

Transnational crime falls firmly within the Joint Interagency Task Force’s purview. Technically, its role is to support law enforcement agencies, who undertake the actual interdictions—boarding, search, seizures and arrests.\textsuperscript{1281} But how ought the military respond when a submarine enters U.S. waters? The traditional mode of engagement is for the military to identify the actor and/or the actor’s intent.\textsuperscript{1282} Thus, if a bomber enters U.S. airspace, the convention is to try to contact the aircraft, either via the airwaves or by sending up planes to intercept it. But with a submarine, even if it could be sighted from the air, how do you know who controls it without getting it to the surface? Should the sub be treated as a civilian vessel or as a potential state actor?

Even if law enforcement agencies do take over, are they really still law enforcement agencies? Customs and Border Protection (“CBP”) Office of Air and

Marine has tactical teams that use Blackhawk helicopters. The agency has deployed predator drones along the southern border—where significantly weaker Fourth Amendment protections apply. Similarly less constrained by Fourth Amendment considerations, Immigration and Customs Enforcement (“ICE”) officers may carry more sizeable weapons than typical police forces. Does it make sense to think about CBP, ICE, or DHS as a law enforcement organization at all—when they actually appear to be rapidly morphing into interior paramilitary institutions?

The muddy waters problem extends beyond the terrorism-drugs-crime nexus to include environmental concerns and biodefense. In 2000, for instance, the National Intelligence Council issued a paper linking environmental changes to pandemic disease. Eco-terrorism further blurs the distinction; it involves “the violent destruction of property perpetrated by the radical fringes of environmental groups in the name of saving the environment from further human encroachment and destruction.” Groups such as Earth First! thus cross lines that might otherwise mark the federal response.

What these categories—climate change, biodefense, drugs, and crime—demonstrate is that U.S. national security, in expanding beyond the interests of the third epoch, is now confronting an intricate relationship between potential threats. This relationship makes it difficult to draw bureaucratic lines and to prioritize different areas. In some ways, it represents a Weberian bureaucracy run amok: While professionalization and specialization has occurred, and hierarchies have been established, jurisdictional areas are not clearly defined. The result is a constant state of friction between administrative agencies. The problem is that the placement of the bureaucracy within the national security framework demands ever greater resources and authorities, with significant constitutional consequences.

IV. CONSTITUTIONAL CRISIS

As the fourth epoch has taken hold, there have been few efforts to limit the expansion of national security. Part of the reason for this is that the question has

1286. NAT’L INTELLIGENCE COUNCIL, INTELLIGENCE ESTIMATE, supra note 1152, at 33–65.
1288. See About Earth First!, EARTH FIRST!, http://www.earthfirst.org/about.htm (last visited Feb. 18, 2012).
changed. No longer is the country asking what needs to be done to limit the spread of totalitarian ideologies—already an extremely broad question. Instead, the most important question now driving U.S. national security is what potential threats does the United States face? This question eliminates intent from the equation. It sidesteps the likelihood of such risks actually occurring. The mere fact that such threats might become manifest is sufficient to drive the country to action. Making the question even more expansive is the fact that these threats have no end. They are really just persistent problems, requiring a continual effort to counter their impact on the United States.

Thus stripped of limits, an infinite number of risks may be placed in the national security framework. Climate change could destabilize countries and entire regions, sending refugees flooding across U.S. borders, threatening the provision of domestic services. Pandemic influenza could cause massive social disruption. Drug trafficking and criminal syndicates could undermine governmental structures. Myriad further concerns present themselves: damage to information infrastructure through cyber attacks, for instance, could bring government, commerce, and education to a halt. Contamination of water supplies or the release of noxious substances into the air could cause widespread devastation, for which the national government lacks the resources necessary to respond effectively. The list continues.

But why now? Such concerns have existed for decades. Why is it that we are now experiencing the broadening of national security to include so many different risks? This Article suggests that the answer lies in history and a deeper understanding of the evolution of U.S. national security.

The first epoch was shaped by powerful forces: foremost, the protection of the Union; following that, international independence and economic growth. During the second epoch the federal government adopted a more aggressive role at home and overseas, looking to shape the environment and head off challenges to its sovereignty. The third epoch brought with it the primacy of the national security dialogue over competing concerns. A rapidly expanding infrastructure, attended by secrecy, and a close relationship with industry, provided the engine of growth. The opportunity to use this infrastructure to drive other concerns was not lost on those with different interests. It was not until the fall of the Berlin Wall, however, that institutional attention could be focused on nonconventional threats. From that point forward, interests began competing for attention by adhering to the existing national security infrastructure.

The evolution of national security in this manner carries with it constitutional and legal concerns. These are rooted in the underlying grafting of potential risks to the national security infrastructure. The national security system was created solely to protect federal institutions. Its object, then, is preservation of the State itself. Broader concepts of security do not change this object. Nor do they alter the fabric of the discussion. National security still points towards the federal government. It is synonymous with State security and, as such, it is a very different animal
from individual security or environmental security. National security, moreover, involves extraordinary measures, hypertrophic executive power, secrecy, and minimal restrictions on resources. It suggests that there ought to be no opponents—that, to oppose the policies lacks moral or political credibility. By crafting issues as national security, the impression is conveyed that they are both urgent and existential and, therefore, should be discussed outside the ordinary course of political debate and scrutiny. Expanding the realm of national security changes the relationship of citizens to the State. It does this by inserting secret functions of government, such as intelligence collection and analysis, and military capabilities and authorities, into a range of social relations.

The national security interests of the Founders centered on protection of the Union, the constitutional structure of the state, and the national government as the institutional representation of the people as sovereign. But it is not now the protection of the people’s sovereignty that is the primary aim of federal activity. Instead, it is the federal government’s sovereignty, which, through secret mechanisms and a greatly enlarged administrative capacity, is being secured as against the people. The resulting constitutional implications make the fourth epoch fundamentally different from those that preceded it.

At some point, the effort to attach issues to national security is simply blatant opportunism. Thus, Senator Barbara Mikulski of Maryland, a member of the Health, Education, Labor, and Pensions Committee, recently considered counterfeit prescription drugs entering the United States. During the Senate hearing, she asked, “[A]re we moving with [a] sense of urgency? Has this been escalated to a homeland security issue? Is this the top of anyone’s agenda?” The underlying assumption is that as soon as the issue becomes couched as a security concern, it rockets to the top of the political agenda. “For any of us who value safety and efficacy,” Mikulski added, “this has to be elevated to a national security, homeland security and criminal level.”

From the inside, such blatant opportunism may appear harmless. In light of limited bandwidth, the way to get attention is to make an issue appear larger than perhaps it really is. But the effects of these provisions are not harmless. They carry significant structural implications.

As a constitutional matter, the shift to the national security discourse diminishes the role that Congress performs through its oversight function. The number of committees responsible for “national security” has rapidly proliferated to include

1290. Id.
1291. Id.
nearly every Senate and House committee.\textsuperscript{1292} This means that no single committee has a complete picture of national security. Nor is any single committee held responsible, to the electorate, for such oversight. Overlapping responsibilities allow legislators to take credit for keeping the country safe, and apportion blame for any failures. For those committees given authority to oversee discreet executive actions, strong political pressures demand that the legislators not hamstring the executive branch on issues of security.\textsuperscript{1293}

Even where the executive acts outside the law, congressional oversight is limited. The National Security Agency’s illegal wiretapping serves as a clear example. Despite the Bush Administration’s disregard for legislative restrictions on the wiretapping of U.S. citizens,\textsuperscript{1294} Congress retroactively legalized the Administration’s actions on grounds that it involved sensitive issues.\textsuperscript{1295} National security, for that matter, entails a significant amount of secrecy, such that Congress may not even be aware of what is happening. When Congress is aware of executive actions, legislators may be prevented from bringing certain information to light via classification, which is itself an executive decision.

Congress’s ability to act with regard to authorization, at the outset, is similarly narrow. The burden rests on those opposing national security measures to demonstrate that failing to enact such measures will not undermine the country’s safety—a nearly impossible burden of proof. For those measures with a significant impact on civil rights, there may be an effort to include a sunset provision, essentially providing an expiration date. But temporary powers rarely turn out to be so limited; instead, they become a baseline on which further authorities are

\textsuperscript{1293} For example, “the NSA’s program of eavesdropping on telephone conversations . . . falls within the jurisdiction of at least the House and Senate Armed Services, Intelligence, and Judiciary Committees.” \textit{Id.} at 1663.

\textsuperscript{1295} See Charlie Savage & James Risen, \textit{Federal Judge Finds N.S.A. Wiretaps Were Illegal}, N.Y. TIMES (Mar. 31, 2010), http://www.nytimes.com/2010/04/01/us/01nsa.html (“The 2005 disclosure of the existence of [Bush’s authorization of illegal wiretapping] set off a national debate over the limits of executive power and the balance between national security and civil liberties. The arguments continued over the next three years, as Congress sought to forge a new legal framework for domestic surveillance . . . . Congress overhauled the Foreign Intelligence Surveillance Act to bring federal statutes into closer alignment with what the Bush administration had been secretly doing. The legislation essentially legalized certain aspects of the program.”).
Similar concerns accompany the legislature’s ability to withstand the drive to expansion via appropriations.

The judiciary, in turn, is unsuited for playing a stronger role in the area of national security. The political question doctrine, which permeates foreign affairs, becomes all the more ubiquitous with the expansion of national security and the increasingly blurred lines between the different risks faced by the country. Claims to judicial institutional incompetence, often pushed by an executive branch eager to protect its interests, find sympathetic ears in a judiciary loath to make determinations on matters involving the security of the United States. Judges, who lack bureaucratic support, resources, information, and training in the area, are reluctant to second-guess the executive branch. The state secrets doctrine further restricts private citizens’ ability to gain access to the executive’s actions, as exceptions to the Freedom of Information Act specifically carve out national security matters.

The executive branch’s continued expansion of its national security portfolio is concerning in light of the political nature of such structures. Shortly before he died in 1954, Justice Robert Jackson, having served as Attorney General during the great expansion of the FBI’s purview into national security in the third epoch, wrote:

I cannot say that our country could have no central police without becoming totalitarian, but I can say with great conviction that it cannot become totalitarian without a centralized national police . . . . All that is necessary is to have a national police competent to investigate all manner of offenses, and then, in the parlance of the streets, it will have enough on enough people, even if it does not elect to prosecute them, so that it will find no opposition to its policies. Even those who are supposed to supervise it are likely to fear it. I believe that the safeguard of our liberty lies in limiting any national policing or investigative organization, first of all to a small number of strictly federal offenses, and second to nonpolitical ones. The fact that we may have confidence in the administration of a federal investigative agency under its existing head does not mean that it may not revert again to the days when the Department of Justice was headed by men to whom the investigative power was a weapon to be used for their own purposes.

If national security is understood as any potential threat to the United States, then it necessarily includes political threats. Together with rapid expansions in power, considerable resources, and minimal checks on the exercise of such authorities, the equation should give one pause.

1296. See generally DONOHUE, supra note 590.
1297. See Donohue, The Shadow of State Secrets, supra note 47, at 168 (discussing application and effects of the state secrets doctrine).
One excuse often given for the rapid expansion of the national security state is that the country is facing a new era in which new rules apply.\textsuperscript{1299} Even this assertion, however, is not new. Throughout the third epoch, for instance, a running theme in inaugural addresses was the novelty of the circumstances in which each new administration found itself. In 1949, Truman suggested the uniqueness of each period in U.S. history, and that the challenges his Administration faced were thus unprecedented.\textsuperscript{1300} Eisenhower noted that the “time of tempest” had swept the continents of the earth.\textsuperscript{1301} The new era pitted freedom against slavery, lightness against dark.\textsuperscript{1302} For Kennedy, the world was very different from the Founding.\textsuperscript{1303} “The world is very different now. For man holds in his mortal hands the power to abolish all forms of human poverty and all forms of human life.”\textsuperscript{1304} For LBJ, the present was distinguished by “rapid and fantastic change.”\textsuperscript{1305} George H.W. Bush made similar claims, as did Bill Clinton, George W. Bush, and, now, Barack Obama.\textsuperscript{1306}

Reasonable minds may differ on whether the threats faced by the country today are any greater than those that existed in previous decades. Perhaps less controversial, however, is the observation that the basic understanding of what constitutes a national security threat has changed. So have executive institutions, relationships, and authorities—with constitutional implications. In 1928, Justice Brandeis remarked, “The greatest dangers to liberty lurk in insidious encroachments by men of zeal, well meaning but without understanding.”\textsuperscript{1307} In developing a deeper understanding of the evolution of conceptions of U.S. national security, perhaps stronger resistance to such encroachments may ensue.
